Planning Guide

Funny people, vacationers. They travel hundreds of miles to resorts. Then fish all day. Go boating. Play tennis. Water ski. Golf. Or sightsee.

Then at night, what do they like to do?

Watch films about travel. Or fishing. Boating. Tennis. Water skiing. Golf. Sightseeing.

If it's your company's film they watch—or if you'd like it to be—maybe you should know more about these people.

We can tell you.

We just completed a detailed research study of the resort audiences who view these films. And it proves that if you have a film—or plan to make one—on sports, recreation, travel, or other interesting subjects, you won't find a more receptive audience anywhere.

Knowing these people is our business. Every

year Modern's unique Resort Cinema operation distributes sponsored films to more than 1200 resorts from coast to coast. Hotels, motels and camps that play host to over 6 million film-viewing vacationers every summer.

Knowing them could be your business, too. That's why we'd like to send you a free copy of our informative resort cinema audience survey. We'll also show you how these active, high-income family groups can be watching *your* sponsored film this coming summer.

If you can't come, write.

We created this new audio visual showroom especially for you. In it, you'll find the most sophisticated equipment available today; everything from rear screen projectors to closed circuit television systems. Loaded with film or tape and ready to operate. But if you can't come, write for our new catalog.

Besides representing most of the leading manufacturers of A-V equipment, we have one of the largest rental inventories of projectors anywhere.

You can rent from us by the day, the week, or the month.

Or you can buy from us.

In either case, we brief you on the available equipment. Familiarize you with the way it works. Assist you

in selecting the projector best suited to your needs. And put the entire package, film and projector, in the hands of your salesman.

Visit our new showroom and get the complete picture.

But if you can't come, write for our new catalog. Projection Systems International, Dept. BS-JF, 305 East 45th Street, New York, N.Y. 10017.

BUSINESS SCREEN

The Decade of Achievement

As computers took their place in our society in the '50s and '60s, people learned that the machines possessed no real "magic" and would not replace human labor. Gradually, everyone has come to accept the truth in that cliché on the poster in the computer room that says in effect, "Computer results are only as good as the original material fed in."

Similarly, we have consistently held that A-V hardware is only as good as the software used in it . . . and precious little of today's gadgetry had good material used in it.

A recent survey of 300 major U.S. corporations by Michael Johns Associates verifies our belief that the audiovisual hardware boom of the 1960s is great in theory, but sadly short of real achievement in action.

"The biggest single complaint we heard," says Michael St. John, president of the surveying firm, "was that expensive A-V equipment and most packaged programs are gathering dust on shelves because they are lacking in relevance and are too general to have custom application."

The survey indicates that a key problem is the lack of motivation contained in much of the software presently available. This is brought about by several factors, including: (1) decentralization causing headquarter-conceived programs to be presented by relatively uninitiated instructors to people who normally balk at anything from headquarters anyway; (2) too great an abundance of programs conceived in ivory towers that do not relate to existing problems in the field; and (3) too great an adherence to outdated tools of the past like tours, brochures and deadly "inspirational" talks by corporate executives.

The end result of all this, says St. John, is high employment turnover, or at best, employees in the field "turned off" by a constant bombardment of material that simply isn't relevant. There is no meaningful motivation!

"What is needed," insists St. John, "are structured programs that do not rely on the ability of an individual instructor that can be regionalized to meet the needs of different areas and deal with the basic problems within a company's various divisions."

We agree. But we also believe that the picture is not quite as bleak as St. John seems to paint it. We have seen too many recent examples of really good software. We know too many people working on really good programming for all facets of corporate use.

We know the hardware is here. We know that the knowledge to create meaningful programming is available, if not fully utilized. A marriage of the proper software to the existing hardware is vital and we believe, presently nearing the altar.

We firmly believe (as we stated last month) that the 1970s will be the decade in which the dog again begins wagging the tail. By the end of this decade, matured A-V "pros" will be dictating hardware requirements to fit the specific needs of their software that works . . . and successfully motivates.

It has to . . . and will . . . happen. Otherwise, American business will be unable to maintain the pace it has set during the past quarter century. The emerging *professional* audiovisual men will provide the needed answers.

REPORTS ON CURRENT EVENTS AND TRENDS

"Micro" Tops in PRSA Film Competition

Micro, a film sponsored by the Western Electric Company to depict its role in the field of micro-miniaturization, was awarded the grand prize of the second annual Public Relations Society of America (PRSA) Film Festival, scheduled in conjunction with the PRSA National Conference.

"Micro" details current research in communication technology through the use of microphotography and split-screen techniques, with an electronic music score created by a Moog Synthesizer. Its estimated total audience to date has been 450,000 through distribution by Association-Sterling Films, New York.

Four other winners in categories determined by total cost of production were: *Number One Bush* by Crown Zellerbach (over \$100,000), *A Child Went Forth* co-sponsored by The American Institute of Architects and the United States Office of Education (\$50,000 - \$100,000), *Good People* by the Hughes Aircraft Company (\$25,000 - \$50,000), and *A Case For Beer — A Major Minor Dilemma* by the Falstaff Brewing Corporation (under \$25,000).

One-hundred-fifty-two films were entered in the competition. They were judged for the achievement of public relations as well as cinematic values by panels of PR, audio-visual and film-subject specialists.

U. S. International Festival Accenting 1971 Entries

The U.S. Industrial Film Festival is now accepting entries for its 4th annual competition. With an expanded format for 1971, the festival

has added new categories of subject matter, a special recognition for outstanding films of the past decade, and is planning a day long seminar comprised of speakers, panel discussions, equipment demonstrations and screenings of selected winning films.

"The festival has received overwhelming acceptance internationally due in part to its policy of limiting entries to 16mm industrial motion pictures and 35mm filmstrips," chairman, J. W. Anderson stated, "thus assuring the business film producer that the focal point will be on his production."

Entry forms and a brochure describing the festival may be obtained by writing the U. S. Industrial Film Festival, Suite 216, 161 East Grand Avenue, Chicago, Illinois 60611. Overseas entrants may cable FILMFEST Chicago.

Berkey's Oxberry Division Sold to Richmark Camera

Richmark Camera Service has purchased the operating assets of the Berkey Photo Oxberry Division for a price in the neighborhood of \$750,000.

The Oxberry Division resulted from the 1965 purchase by Berkey Photo of the Oxberry Corporation. Oxberry Optical Printers and Animation Stands are popular throughout the film industry. Many of the techniques used in making animated cartoons and TV commercials were developed by John Oxberry, founder of the company, who will become associated with the Richmark enterprise.

Richmark will manufacture and sell Oxberry products and will take over responsibility for units in warranty.

Wildlife Federation Needs 16mm Footage of Wildlife

A world-wide search for motion picture footage on wildlife and conservation has been launched by the National Wildlife Federation.

The Federation is particularly interested in action scenes involving animals and illustrating animal behavior and footage that dramatizes ecological problems.

Film-makers are encouraged to donate footage to the Federation as a tax-deductible contribution. However, leasing or purchase can be negotiated.

Inquiries should be directed to the National Wildlife Federation Film Library, 245 W. 55th Street, New York, New York 10019.

The Communicators Acquires Worcester, Mass. Film Corp.

The Communicators, Inc. has acquired the Worcester Film Corporation, Worcester, Mass. Worcester Film will continue operations as a subsidiary company.

Founded in 1918 by Floyd Ramsdell, Worcester Film has produced more than a thousand industrial films over the years, and is nationally known for its pioneering work in three dimensional systems.

First Color Processing Lab for Alberta Opens

The first professional film color processing laboratory in Alberta has gone into operation at Cine Audio Limited, 10251 - 106 Street, Edmonton.

Company president N. J. (Nick) Zubko says the lab went into production at mid-October. Processing and printing of commercial Ektachrome EF 7242 and equivalent types of film is now in full swing.

Make sales training more effective with DuKane Cassette Micromatic

Tape Cassette snaps in — sound and filmstrip work together *automatically* to help your training and selling efforts. The Cassette Super Micromatic tape sound filmstrip projector is the most versatile unit ever developed.

WE'RE AGAINST DIRTY FILMS.

Dirt can ruin a film.

And our business is printing and processing 8mm, Super 8mm and 16mm for motion picture duplication and preprints.

Clean water. Clean air.

We can't operate without them.

That's why we've recently installed a unique water filtering system in our processing department.

Unique because this system filters water to one-millionth of a meter. Result: Incredibly pure water.

It's why we've put a highly sophisticated air-control system in our cartridge loading room.

In this system, air comes from thousands of tiny holes in the ceiling. It forces dirt and dust particles down to floor level and out the exhaust exits.

Dirt.

We think it's obscene.

How to project a better sales picture in 1971.

Let your salesmen carry the Bohn Benton Institor; an elegant, rear screen, Super 8, sound and motion picture projector.

It's light, only 17 pounds.

It's simple to operate. In less than 30 seconds, you can have it set up and running in broad daylight.

It's cartridge loaded. There's no film threading.

It's an attache case. Easy to carry. Just 4-inches wide.

And it's sensibly priced. \$300 for single units. Or as low as \$240 in quantities.

The Bohn Benton Institor. You'll be sold on the way it sells.

the screen executive

Harold Hinkle, formerly of Pathe Laboratories, has been promoted from production manager to vice president in charge of production for Movielab, Inc. . . . **Canyon Films, Inc.** has announced that **Donald W. Jessup**, formerly of Centron Corp., is now with them as director of sound. Jessup designed and invented multi-channel presentations, automated presentations, and sync-sound in formerly impossible location situations . . . The appointments of **Charles Dieterich** as director of marketing and of **Don Freeberg** as manager of advertising and promotion for Xerox Films were recently announced; the company, begun only 18 months ago, is a part of the Xerox Education Group; the group has its headquarters in Stamford, Conn. . . . Award winning producer-writer **Charles B. Smith**, formerly with Universal Pictures, has joined Audio Productions of New York and California as executive producer . . . Named at Barbre Productions, Inc. as general manager was **Edwin C. Metcalfe**, veteran television executive; and **H. J. Anderson** was selected to fill the newly created post of executive producer. These announcements are the latest step in an expansion program which began in midsummer 1970 . . . Former free lance film producer, **Robert Anderson**, has joined Layson Productions, Waukegan, Ill., as director of photographic services. Anderson, with 32 years of photographic experience, will oversee all phases of audio-visual aids and commercial photography . . . Promotions at Arriflex Company of America include **Bruce E. Harris**,

HARRIS

ILDAU

former vice president and sales manager, to the position of executive vice president Harris succeeds

Victor James, who is going into semi-retirement; also at Arriflex, **Peter M. Ildau**, former assistant sales manager and government contract administrator, was named vice president, sales; and **Volker W. Bahnemann** assumes the newly created position of vice president, marketing. Bahnemann previously

BAHNEMANN

GATES

headed the company's repair and technical services departments . . . In a major move to strengthen their position in the sound business, **Carl Gates** was named as VP of marketing for the Califone Roberts Division of Rheem Manufacturing Company. Gates was formerly director of market planning for the consumer products division of RCA . . . **Michael Kucharo** has been named as producer-director and sound engineer for Swartwout Film Productions and the Arizona Film Center. At the Center Kucharo will supervise all sound recording work, assume responsibility for unit production and act as film editor on special assignments . . . CBS Electronic Video Recording has appointed **Leon J. Knize** as vice president, licensing. He will be responsible for developing manufacturer interest in licensing agreements to produce EVR teleplayers for North America. . . . The 11th Annual International Broadcasting Awards sponsored by the Hollywood Radio and Television Society, is scheduled to be in Chicago in mid-January, 1971. **Fred A. Niles**, President of Fred A. Niles Communications Centers, Inc. has agreed to serve as chairman of a Television Creative Screening Panel. Niles will be serving IBA in this capacity for the tenth straight year. These awards honor the "world's best" radio and television commercials . . . Congratulations . . .

PARADOX: All writers promote the fact that their films have won awards at Film Festivals, but no writer believes that the best films receive awards at Film Festivals.

In all the years I've been writing films, and in all the conversations I've had with other writers who write films over the years, I have yet to meet a single scriptwriter who believes that the awards at Film Festivals go to the best written films, or for that matter that they go to the best produced films. And yet . . . both I and all the other writers I know invariably make a point of mentioning the fact that a particular film has won a Golden Mercury, or a Cine Golden Eagle, or a Chris, or what have you, especially in those cases where you're trying to sell your services to a new producer or client. Now . . . how does that make sense to you? If you don't believe that an award is an indication of superiority, why play it up as a sales tool?

Paradox: Nobody believes in film festivals, but they keep proliferating.

Every year brings a new crop of film festivals, and the only way they can survive, or increase, is if they are supported by producers and clients . . . and writers, who are usually on the judging committees. Now if nobody believes in them, how come they keep proliferating and prospering? Because, dear friends and readers, *they are profitable!* Profitable for whom? you ask . . . for lots of people, friends. For the sponsors, the producers, the clients and . . . for the writers.

I myself can testify that although I have placed many ads for my services over the years in many journals of commerce, the only ad which ever paid off in direct inquiries and sales was one in which I listed all the films I had written that year along with all the awards at national and international film festivals won by those films. There is something mysteriously magical and powerful about the words, "Award-Winning-Film" that makes people turn around and look atten-

tively at whatever is on the screen.

And, if you really want to make a good investment . . . put a title on your film showing the Venice Mercurio D'Oro or whatever your film has won. Those leaders are really like little golden fingers of support for your sales message. They're expensive of course, especially since they usually have to be added a couple of months, or even a year after being released. But oh, Brother, are they ever worth it even if you only put them onto your house films!

Clients love awards because nobody knows how to judge a film. And it gives a client the extra security he needs to be able to defend a film he's made, (and therefore also all the decisions he had to make in producing the film), if he can point to a series of awards and certificates of merit won by the film produced under his aegis and/or leadership.

The sponsors of film festivals are the real winners, though. There is enormous profit in a film contest or festival, if it is done on a commercial basis. In fact, if it is *not* done on a commercial basis, it will probably lose money, paradoxically, because it will attract better films! But just look at the income from a film festival . . . entry fees, banquets, travel expenses, even charges for winners' plaques. One gruesome contest won by a film of mine required me to come up with \$75 for the winner's plaque, which turned out to be a \$6.00 vacuform plastic wall hanging. Luckily I didn't win "Best of Show," which was \$100.

Paradox: Good film festivals, which are prestigious, usually lose money for their sponsors, but bad film festivals, which are notorious, are usually very profitable for their sponsors.

Now how can that be? The answer, Friends, is in the judges. If the people sponsoring the film festival are interested in improving the quality of films and the industry in general, they will select good judges to do the judging . . . and

that will cost them some important amounts of money. Prominent people who are interested and qualified will not waste their time in private screenings just for the prestige of having their names printed in a program or of being introduced at a hotel beef dinner. Judges who are competent, qualified, prominent, and interested in films are also going to be expensive . . . which is the way it should be. So if you want to make money on a festival, you just can't afford good judges.

On the other hand, if you get local producers to judge films, they usually send over their production co-ordinators because they're too busy themselves. So the entire "raison d'etre" of the film festival, the judging and awarding of prizes, is a volunteer effort by unqualified people who themselves have an axe to grind. This kind of thing never matters to the winners. The winners of awards at Film Festivals usually feel that they are very deserving of the awards granted to them, and they usually have very little to complain about regarding the running of the contest, the judging, or the awards. It's the *losers* who feel cheated.

There are exceptions to all these rules of course. I don't think anybody ever minded losing to "Why Man Creates" which has won practically every contest it ever entered. The way to cope with competition is never to enter a film *against* a film like "Why Man Creates!" And this is entirely a practical suggestion. If a client is open and frank

Continued on page 16

Until now, a big screen projector meant big weight.

Big screen portable projectors are big sales and training helps. But they've frequently been too heavy to carry around. Too cumbersome. And so, too often they got left behind.

But now there's a big screen one that's light enough.

The MPO Videotronic Super 8.

Weighing in at just 16½ pounds, it's almost 3 pounds lighter than its lightest competitor, and nearly 5 pounds lighter than its heaviest. (See chart.)

Which means a lot to the salesman that's carrying it.

Yet, with all its lightness, the Videotronic Super 8 has even more features than others in its class: unique 2-way projection—on its own built-in screen, or converts to large wall picture; optional reel-to-reel attachment which shows up to 60 minutes of film; 150 watt halogen quartz lamp; full year guarantee (three times longer than competition) backed up by 35 years of projector manufacturing.

So now if you want a big screen portable projector, you can get a light one.

And the lightest one of all is the MPO Videotronic Super 8.

For more light on the subject, call, write or fill-in and mail the coupon.

PARADOX continued

with me, I can practically assure him of an award for his picture. You have to pick the right festival, with the right judges, and the right competition against you, and anyone can win an award, with almost any kind of picture, regardless of merit or lack thereof.

Of course, if you want to win an award with real prestige, an award that really means something to people who know the fine points and the differences between awards, well then you have to be frank and open with me about a year in advance of planning the film.

I think we all know what kinds of pictures win awards . . . they share certain basic characteristics of approach and technique and style, and yes, even certain characteristics of subject matter *per se*. The 'festival picture' is a genre all its own . . . and anyone can buy or have it if he wants to spend certain kinds of money and is willing to put the film in the hands of writers and producers who understand the 'festival film' and who produce such pictures routinely. I'm not sure this is a *good* development, but I *am* sure it is a *growing* development. I have had more inquiries and interest shown in 'festival films' this year than in any previous year. In normal times, only one or two clients out of a dozen express any interest or desire in winning awards. But this year, practically every client, and every producer I've worked for, has been very interested in the possibilities of entering film festivals. That's not necessarily a good sign. It may even be a bad sign . . . one of a weakening marketplace, which requires bolstering by artificial means.

And film festivals have become very artificial . . . very structured and routine . . . very familiar and *outré*. There is the routine of judging by unknowns. Just this morning one of my producer friends showed me, (with some annoyance and impatience), an invitation in the morning's mail to be a judge of a film contest. It also suggested, *sin verguenza*, that he should assign "eight or nine of his creative people" to the judging chore as well! That ended his own personal interest in this or any other film competition.

All judgments of films follow the

same routine. For those few of our readers who may, incredibly never have been judges or "screeners" in a film festival, I will describe the process. The honored judges, usually five or seven, gather after office hours in some neutral producer's screening room. The first film to be shown is fifteen minutes long, and they watch it all the way through to the end title. (That is the last time this evening any film will be seen to the very end.)

The second film is seen about half-way through. The third film is shown only for about five minutes. And after that, the next twenty-five films or so are looked at for about two to five minutes, unless some really exciting picture comes along. But that doesn't happen too often. You get so you can judge them in the first sixty seconds or so. Or at least, you get to the point where that's about all your patience will permit. Obviously, this means that if you're going to try to win awards at film festivals, that first sixty seconds had better reach out and grab the judges, because it may also be your very *last* chance, unfair though that may be.

Paradox: Although it becomes a dull, boring, routine, annoying process which is largely a terrible waste of time, there is no activity more valuable to a writer than serving as a judge at a film contest.

Now, maybe on the surface that doesn't make too much sense in view of the paragraph just preceding it, but it is still a true statement, and there is a wierd kind of logic behind it. The reason it's so helpful to be a judge is not that you see new trends in the good films as they come along. In fact, the vast majority of what you have to wade through is simply garbage . . . and derivative garbage at that. But the experience does one very important thing for you *it shows you what not to do!* To repeat and to emphasize: **JUDGING FILMS FOR A FESTIVAL TEACHES YOU WHAT NOT TO DO!**

And then finally, it's the night of the big awards dinner. This is another all-too-familiar routine to anyone who's watched the Emmys or the Oscars on TV, or to anyone who's been through it. (There is one departure from the norm. If it's a foreign film festival, the company president and his wife usually go

over to receive the award on behalf of the company, although he may have put all sorts of obstacles in the way of producing the film.)

You struggle into you iron lung Tux, pay some Neanderthal character \$5.50 to put two new dents in your fenders, smile insipidly through a hospitality hour with two watered drinks, submit yourself to the indignity of the standard hotel banquet with its fruit cocktail in a warm cup, its string beef congealed on a cold platter, and its melted mocha ice cream. Then you listen to a keynote speech by a puerile politician who has just been defeated for re-election, and finally the announcement of the winners of the awards.

It starts with clapping for the first winner, but after 37 more winners in 17 classifications you begin to lose track. The clapping stops. After all, why should the runners-up clap for producers of films they feel are inferior to their own submissions? The most embarrassing problems at the awards banquet are the awards for which nobody appears as claimants. If they don't want to win, then why did they enter? Did the mail fail? Did their baby-sitter disappoint them? It's always a mystery. And those speeches of thanks! Those effusive congratulations from the professionals to the people who hired them, for their wisdom and creativity! Enough already! I think the worst festivals are those where they tell you in advance you *may* have won, but you have to come to the banquet to find out for sure. That's really dirty pool!

The best summary of an Awards Banquet I've ever heard was at a recent Festival which I shall call the Podunk City International Film Festival. My client had won an award for the film I had written and he returned to the table beaming and joking about how surprised, pleased, and tongue-tied he had been on the platform. It was unfortunate, but unknown to my client, one of the losers in the same category as our winner, was also at our table. He listened for a while, then turned and said to me . . . "It's just like poker, Stan." I looked puzzled, and he shrugged and explained . . . "The winners make jokes, and the losers cry 'deal!' Just like poker . . . except the odds are tougher to figure."

Hope Reports
Rochester, N.Y.

Forecast '71: A-V Market Improvement

Business films will have a better year in 1971 than they did in 1970. This is the consensus of the opinions of a number of leaders in motion picture production, laboratory services, and print distribution.

Although it will be several months before the 1970 level of industrial film production, release printing and circulation is determined, it is generally agreed that 1970 was not a vibrant year.

General economic conditions in the United States have probably reached a low point at year's end and are beginning to show signs of improvement. The industrial film busi-

ness felt the impact of the recession but appears to be improving. A number of film producers and laboratories have reported in November and December 1970 that activity is picking up.

Just how 1970 film business compares with 1969 is difficult to ascertain right now. It probably was off slightly. In contrast, there is a strong likelihood that the education AV market had a better year in 1970 than in 1969. They could mean that for the entire audio-visual industry in this country 1970 may be about level with 1969 or possibly even up slightly.

The year of 1970 has taken its toll. In the East at least four motion picture producers have gone under. Several film laboratories have had a difficult year.

On the West Coast the situation was almost as bleak. On the surface it appeared quite dismal, but some of the pessimism was actually based on the hard-hit Hollywood feature film business. This coupled with less television production, especially of commercials, colored the total picture.

Film production activity through the central portion of the United States was brighter. While there were spots of gloom, production held up much better, or at least bounced back much quicker.

The sound filmstrip has had several excellent years — led by the school market where the medium has been recently "discovered." Business and even government use of that medium continues or is improving. For example, the medical field which has never been a strong market for sound filmstrips is experiencing new use of that tool.

Several government agencies which had all but abandoned the filmstrip a few years back are now back in production. Both the Navy and NASA are examples.

Eight millimeter, ala super 8, has made solid gains in the past few years. The amount of super 8mm film used rose sharply in 1969 but appears to have leveled off in 1970 or even dipped. Hope Reports

looks, however, for an increase in super 8mm during 1971. The gain, on the other hand, will not be spectacular until more models of super-8 sound projectors are introduced and catch on with customers.

Generally speaking the various AV equipment lines should do well in 1971. In 1970 most of them outperformed the software items.

Electronic systems, ala videotape recording, television (both broadcast and closed-circuit) plus the newer cassette forms such as CBS's EVR (electronic video recording), are not expected to make a significant splash in 1971. The actual introduction of EVR has been repeatedly moved back and is now supposed to be ready for delivery in early 1971. Just as in the 8mm film area, confusion exists in the minds of potential buyers as to which video cassette system will be the one that will be widely accepted and used in coming years.

Hope Reports does not look for any one electronic, video cassette system to become a major factor in audiovisual communications at least in 1971 and possibly for more years than that. This subject is expected to be fully explored in *AV-USA 1970* (the annual Hope Reports market review) which is scheduled for release in July 1971 or earlier.

Television film use appears to have reached a peak. The looming market of cable television is being watched carefully and could prove to be one of the more significant developments of 1971.

In-plant industrial film activity has been slow in 1970. Furthermore, it is not expected to bounce back quickly because corporation executives do not want the responsibility of adding people until they can solidly justify any expansion.

While the recession of 1970 has hurt the film business and some individuals, in the long run, fat which assiduously collects during prosperous times must be trimmed off from time to time. The AV industry is in a solid position and the 1970 decade will see unprecedented growth.

Boom Boon.

We've taken our most versatile, best-performing unidirectional studio microphone, the *Shure SM53*, and made it even more versatile by developing a complete boom accessory system that equips the SM53 for every conceivable boom and "fish-pole" application! Shure design engineers started with a major breakthrough in design: a small, lightweight, extremely effective isolation mount. They developed a super-flexible isolation cable, a pair of highly-efficient front-and-rear windscreens, and a 20" boom extension pipe. Finally, they developed a complete boom assembly that combines unusually small size with superb control and noise isolation. Result: an accessory lineup that makes every Shure SM53 studio microphone a complete microphone system! Write: Shure Brothers Inc., 222 Hartrey Avenue, Evanston, Illinois 60204.

Since a decision on buying new tires for the family car normally rests with the man of the house, tire distributors are particularly busy on Saturday mornings, the one day most men have free.

With a lot of customers and a limited number of salesmen, several hundred Michelin tire distributors throughout the country have turned to Fairchild Seventy-21 audio visual systems as auxiliary salesmen. And by the time that a human sales counterpart is available to take the order, the customer's choice is often a Michelin tire rather than one of many other brands supplied by the distributor.

Developer of the renowned radial tire and Europe's largest tire manufacturer, Michelin Tire Corporation has been using Fairchild projection systems for a number of years to establish and boost radial tire sales in the United States. Urging its distributors (carefully selected to uphold the prestige image of the company) to use the Fairchild Seventy-21 as a sales aid, Michelin has made dramatic sales inroads against tires produced by domestic tire manufacturers with tremendous annual advertising budgets.

"A small investment in a few hundred projectors, has worked wonders in increasing radial tire sales year after year for Michelin," says a Michelin spokesman.

The company has produced four films for display, at the consumer level, on Fairchild projectors demonstrating confidence that the Michelin tire sells itself.

"Safety has become one of the most important factors in tire sales over the past few years. Yet, despite the advertising and promotion by manufacturers of major tire brands in the United States, many customers don't walk in and request a particular name. They ask for the safest and best tire for their money," says the Michelin spokesman.

This is where Michelin, with the help of a Fairchild Seventy-21 Super 8 audio-visual sound system, sells itself.

Michelin has about a thousand distributors throughout the United States who also handle most of the other major American tire brands. The Michelin X radial tire is comparably priced to the premium

Films Help Sell Michelin Tires

With a series of four-minute films at the point-of-purchase, Michelin tire distributors save salesmen's time and improve tire sales.

grade of most domestic manufacturers.

But instead of taking five or ten minutes to explain the safety and other features of a tire, the salesman walks the customer to a projector on display, inserts one of Michelin's four film cartridge presentations, and lets the customer see for himself. The operation is so easy that if the customer isn't convinced by the end of the first four minute film, he can slip in the second, third or fourth cartridge by himself."

Michelin is convinced that these presentations are substantially more effective than an oral explanation by a salesman. "While a customer is watching the Michelin radial tire sell itself, the salesman is free for five or ten minutes to assist other customers."

Michelin has been marketing its radial tire in the United States since 1950, two years after development by the company in France. Combining steel cabling in rubber casing, the Michelin radial tire has been hailed as the most significant advance in the tire life and road safety in years. In the United States, Michelin radial tires for trucks have

been available since 1950, and for passenger cars since 1955. Despite this fact, American tire manufacturers have expressed interest in radial tires only in the past two years, more than a dozen years after Michelin began selling its safety concept to American automobile drivers.

"In addition to technical presentations, films play an important part in selling large orders. In such cases, you go to the customer, not vice versa. Taking a little projector, without disrupting and cluttering an executive's office with bulky screens and equipment, makes a more businesslike impression. If you'll pardon the pun, it also projects a better image of your company and its product."

With 200 Fairchild Seventy-21 units already on order or in use by Michelin distributors throughout the country, the company expects to project its quality image and product all over the United States, increasing sales each year. Worldwide, nearly 100 million Michelin X radial tires have been sold to date in 150 countries and territories.

Michelin tire display in distributor's store features Fairchild automatic projector in center.

How long will the action wait while you change magazines?

A minute?

Ten seconds? It depends, of course; but ten seconds is all you'll lose while changing the NPR's magazine. That's including five seconds for checking the gate. And that's two or three *minutes* less than you lose with every other silent running camera on the market.

Snap off the old magazine, inspect the aperture, snap on the new magazine. That's all. You don't need to touch the film. The film is threaded and the loop is formed inside the magazine when you load it, before shooting starts. The rear pressure-plate is on the magazine; the aperture is on the camera body. When you snap off the magazine, there's the aperture, right before your eyes. Couldn't be easier to clean.

With unscripted action that won't wait, you can leave the tape recorder running when you run out of film, and cover the lost five seconds with a cutaway later. The NPR's built-in clapper and sync pulse will automatically re-establish sync. In the studio with a script, the five-second magazine change can prevent everyone on set going off to make a phone call when they hear the dread cry: "Reload. With the NPR, it's just another take. Immediately.

The NPR's rotating two-lens turret, its precise reflex viewing, light weight, registration-pin movement, balanced shoulder-resting, and, of course, its blimp-free silence — they all make life easier, too. May we send you our NPR brochure?

A-Vs On A Budget

Low budgets do not have to mean lack of sophistication in audiovisual facilities and usage. Through careful planning Denver's Fox & Co., intalled two multi-media, multi-use audiovisual rooms for less than \$3000.

The word "multi-media," "multi-screen," and "rear projection" when used in conjunction with the design of an audiovisual facility or conference room usually bring visions of massive construction, miles of electrical control wiring systems, exotic lighting systems and in general a large expense for the buyer of such a system.

This is not always the case, as a visit to the offices of Elmer Fox & Co. in Denver will attest. When the local office of this national CPA firm moved to its new quarters, the move cost more than was planned (when doesn't it?). The result was that there was very little budget left for an A-V system, let alone a sophisticated facility incorporating the terms described above.

The principals of the Fox company, however, had been enthusiastic users of audiovisuals for several years, and having been exposed to some of the newer techniques, were most anxious to incorporate them in their new conference room.

Denver's Audio Visual Consultants and Visual Aids Supply Co. provided the economical solution through the careful, studied use of

the existing space at the Fox office.

There was an existing long narrow conference room . . . approximately 11 x 36 feet. Utilizing the existing doors to the room, it was divided into two rooms, one 11' x 25', the other, a smaller library/meeting/projection room was 11' x 11'. The existing lights, adequate for normal room lighting, were modified only to permit separate switching. Four low brightness cone multiplier down lights were added in the main conference room and wired for control from a manual dimmer mounted near other light switches in the room.

To separate the rooms, a divider was fashioned from two panels hinged together which could be opened and folded against one wall. Installed in each panel was a 4' x 4' Polacoat rear screen so that when the panels were closed, the main room is equipped for rear projection from the other. A Radiant 70" square screen was suspended from the ceiling in the library room and rolled up when not in use. For front projection, the divider was moved and the screen lowered.

Fox Company executives view : two-screen slide presentation on rear screens housed in specially designed divider panel.

Without projection

When no projection is being used, it is possible to open the entire area to accommodate more than 40 persons. Or, by closing the divider, both rooms may be used.

Front projection

With the room divider open and the front projection screen in use, the room lights need only be turned off to keep stray light from the screen.

Rear projection

Two Kodak Ektagraphic slide projectors are positioned on a bookshelf on the rear wall of the library, each properly aligned to each of the rear projection screens and ready for instant use.

A custom remote control system permits control of the projectors from the main conference room with a hand control which can be plugged in at several locations.

The Fox company had been making overhead transparencies for some time for use in their Beseler Portascribe projector. But they had not used slides to any degree. Part of the installation was the addition of a Kodak Visualmaker Kit which includes an Instamatic camera with pre-set copy stands. In less than a week after completion of the facility, the company had conceived, photographed and presented an entire client presentation.

Through the use of their new facility, Elmer Fox & Company is making financial statements simpler to understand and use for its customers. Management information is now presented on slides with financial data liberally interspersed on charts and graphs, and their clients are going away with better understanding than ever before. The system is also being used for staff training sessions and other programs.

So successful has been the installation, that other Fox offices are presently planning similar systems in other locations.

And, the total cost of under \$3,000 covered the entire project including all necessary equipment, wiring, construction, engineering and carpentry.

A ceiling mounted front screen provides for normal front projection of visuals (above).

With divider in place, the smaller room (left) provides a good meeting place for small groups or individual study

Diagram of Fox conference room(s) shows it in various forms of use: (Top) as two separate conference rooms with divider in place; (Middle) as one large front projection facility; and (Bottom) as rear screen facility with images from smaller room to rear screens in divider panel.

SCORING FORM FOR EVALUATING AUDIO-VISUAL COMMUNICATIONS

TITLE

PRODUCED BY

YEAR

DESCRIPTION or TYPE OF AUDIO
VISUAL COMMUNICATIONS TOOL

NAME OF
SPONSOR

INDUSTRY or
INSTITUTION

PRIMARY AUDIENCE for which
COMMUNICATION was intended

ORIGINAL OBJECTIVES of this
AUDIO-VISUAL COMMUNICATION

PLEASE OMIT ALL QUESTIONS THAT DO NOT APPLY TO THIS AUDIO-VISUAL COMMUNICATION

Select only one (1) score number for each of the following ten (10) questions. Write your score number for each question on the proper line and in the correct column. It will make it easier for you to arrive quickly at your evaluation and total score for the communication.

QUESTION NUMBERS	EXCELLENT 10 Points	GOOD 8 Points	AVERAGE 6 Points	FAIR 4 Points	POOR 2 Points
1. OBJECTIVES — Does this communication appeal to its intended audience and accomplish its stated objectives?					
2. COMMUNICATION — Was this communication informative and did it summarize the salient point?					
3. CONTINUITY — Were extraneous elements filtered out, and did the presentation move smoothly?					
4. INVOLVEMENT — Will this communication hold attention, secure emotional responses, and draw its audience into desired commitments?					
5. BELIEVEABILITY — Were highly technical subjects simplified, understandable, true sounding and believable without distracting the audience?					
6. TECHNICAL QUALITY — Were the technical features, such as, cinematography and sound recording professionally done?					
7. TALENT — How do you rate the casting of actors, their voices and performance?					
8. INSTRUMENTATION — Were the drama, gestures, art work, animation, multi-media charts, diagrams, maps, etc., used effectively to help present the message?					
9. INNOVATION — Were presentation effects well used, such as, music, sound effects, voice-over narration, colors, whispers, etc.?					
10. TIMING — Were the commercial introductions, credits, sponsor's image, products and publicity limited to acceptable portions of the total presentation time?					
TOTAL EACH OF THE FIVE (5) COLUMNS

A REALISTIC NEW FILM RATING FORM

Through the combined efforts of O. H. Peterson, Business Screen and the Industrial Audio-Visual Association, the film rating form at the left has been developed, and is offered for use by anyone judging or rating films.

For more than a year, BUSINESS SCREEN and the Industrial Audio-Visual Association have been working on the development and testing of the film evaluation form shown on page 26. We are proud to suggest and offer it to any person or group wishing to use it.

Special credit for much of the development, revision and testing of the form must go to O. H. Peterson, retired A-V specialist for Standard Oil.

For years, the evaluation, rating and scoring of audiovisual programs has been a frustrating chore for A-V specialists, film juries, producers, sponsors and users. And, various scoring forms in use varied from three to as many as sixty items to be scored, with many of different values. Few, if any, film festivals use the same or even similar rating form, which has caused much of the criticism and consternation expressed continually by entrants. One film competition is still using a form developed in 1925. Testing of various forms presently in use showed them to have a

very large "error factor."

Such forms, when used by more than one person produce an extremely wide point spread on one or all rated items. Some were too technical. Some are left too much to individual interpretation . . . and few can be used universally, i.e., by one person or a group.

What has been needed for years is a rating form that: (1) can be used by a person or a group; (2) is based on a minimum number of items of equal value; (3) can be quickly and easily tabulated; and (4) is proven to be accurate and valid in use with a low probable error factor.

This form is believed to satisfy these needs. In testing, it has produced consistently greater reliability, accuracy and validity of results.

Since its development, the form has been accepted as a standard for the Industrial Audio-Visual Association and its members. In addition, an IAVA committee comprised of Peterson, W. H. Pratt, Jr., J. C. Damon, Jr., and J. T. Hawkinson prepared and submitted the form to the American National Standards Institute's Photographic Audio-Visual Committee PH-7 for consideration as a possible national standard. It has subsequently been officially submitted, accepted and is presently under consideration by the committee.

Any good 16mm projector performs well under ideal viewing conditions. But you usually don't have (or don't want) perfect darkness or perfect quiet.

That's why you need the perfect projector for imperfect conditions. It's called the Bauer P6 automatic 300 16mm portable sound projector.

What makes it better? For one thing, the Bauer P6 has a special new high-

intensity lamp. It's the GE MARC 300 metal arc that produces nearly four times more light than conventional tungsten lamps. More light means a more brilliant picture. More vivid color. Clear images even in full room light.

The Bauer P6 has a 15-watt solid-state amplifier, for real high-fidelity sound. And a lot of other features, too: automatic threading, optional 4,000-foot

capacity and "change-over" control, and automatic fail-safe circuit to stop the projector if your film breaks.

Maybe you think that a projector that does so much should cost a lot. It doesn't. And this may be the most attractive feature of all. Write for information to
Dept. BS-1

BAUER P6

THIS PROJECTOR WORKS BEST WHEN THE CONDITIONS AREN'T.

1971 FILM FESTIVAL PLANNING GUIDE

A review of leading film festivals and competitions

THE AMERICAN FILM FESTIVAL

Sponsored by the Educational Film Library Association
New York City May 11-15, 1971

The 1971 American Film Festival, sponsored by the Educational Film Library Association, representing school, university and public libraries throughout the U.S., and will be held May 11-15, 1971 at the New York Hilton Hotel, New York City.

CATEGORIES: 36 major areas of education and information, art and culture, religion and ethics, business and industry, and health and medicine will be offered for final judging by screening groups during the Festival Elections will have been made by pre-screening juries for final entries.

AWARDS: Blue Ribbon (trophy) and "Red Ribbon" second prizes plus the grand prize and "Emily." Awards to be presented at banquet, Friday, May 14, 1971. **FESTIVAL:** May Closing date for entries: January 15, 1971.

INFORMATION: Educational Film Library Association, Inc., 17 West 60th St., New York, N.Y. 10023.

THE 1970 AMERICAN TV & RADIO COMMERCIALS FESTIVAL

New York City — June 7-8, 1971
Other U.S. & Foreign Cities — May-June

ELIGIBILITY: Open to commercials broadcast in the U.S. and Canada for first time during 1970 and through January 1971. No limit on entries from sponsors, agencies, station or production companies.

ENTRY DEADLINE: March 1, 1971.

FEES: TV-\$50 per single entry, \$85 per campaign. Radio-\$35 per single entry, \$50 per campaign. \$35 to attend full day of screenings and award ceremonies.

CATEGORIES: TV — 14 product categories plus Classics which must have been first telecast more than five years ago. Special International TV and Cinema category open to entries from other countries. Radio — 14 product categories, various technique categories by market size. Optional competition for both TV and Radio is new "Effie" category for marketing effectiveness.

JUDGING: By ten regional councils of prominent advertising executives. Basic criteria for judging is each commercial's ability to communicate its sales message, visual and aural appeal and general technique skill.

AWARDS: "Clio" statuettes to "Bests" in each category, certificates to finalists.

INFORMATION: 16mm reel of winners, product category reels and audio tapes available from American TV & Radio Commercials Festival, 30 E. 60th St., New York, N.Y. 10022. Phone: (212) 693-1900.

THE TENTH ANNUAL FILM FESTIVAL AMERICAN PERSONNEL & GUIDANCE ASSOCIATION

Held in conjunction with the Annual APGA Convention at Atlantic City, New Jersey
April 4-7, 1971

CATEGORIES: Films and filmstrips in the following categories will be presented: Inter-Personal Relations; Educational and Career Planning, Rehabilitation; Counseling: The Profession, Principles and Techniques; and Guidance Films from other Countries.

SELECTION: All films and filmstrips presented at the Film Festival are previewed before the final invitation to the producer. Generally 75 to 100 films are previewed, and 25 to 30 are chosen. Selection is aimed to provide as wide a program as possible.

AWARD: "Best Film: 1971 APGA Film Festival." The winner will be recognized by a plaque and receive coverage in the June issue of the Guidepost, APGA's nationally distributed newsletter.

INFORMATION: Further information about APGA Film Festivals is available from: APGA Convention Film Festival, 1607 New Hampshire Avenue, N.W., Washington, D.C. 20009.

THE FOURTH ANNUAL ATLANTA INTERNATIONAL FILM FESTIVAL

Atlanta, Ga. June 19-26, 1971

MANAGEMENT: J. Hunter Todd, Executive Director; Cyril Fleisher, Assistant Director. Mailing address: Drawer 13258K, Atlanta, 30324 USA Phone: (404) 633-4105. Cable: INTERFILM, USA. Telex: 54-2484.

SUPPORTING GROUPS: "Forward Atlanta" (Atlanta Chamber of Commerce); The Atlanta Arts Alliance; INTERFILM.

CATEGORIES: (and entry fees): Feature film (\$200); short subjects (\$50); television commercials (\$30 each); experimental films (\$25), documentary films (\$50); student productions, no entry fee.

AWARDS: The Golden Phoenix (best of Festival); The Silver Phoenix (best film in each category); Gold Medal Special Jury Awards (for distinction in special areas); Gold, Silver and Bronze Medals for best films in each division as; industrial; educational; sales training; economics; television; safety; public relations; sports; underwater; peace, etc.

OTHER AWARDS: The Golden Dove (best film of world peace), The Eastern Hemisphere Award (best film dealing with flight), The Regency Hyatt Award (best film by a southern U.S. film producer); INTERFILM Award (cash grant to best student film); and The "Forward Atlanta" Award (best film by an Atlanta producer).

LOCATION: Regency Hyatt Hotel. Exhibition and convention in conjunction with festival including demonstrations and seminars. Public screening will be held at Symphony Hall of Atlanta Memorial Arts Center.

THE 7TH CHICAGO INTERNATIONAL FILM FESTIVAL

Chicago — November 7-21, 1971

CATEGORIES: Business & Industrial film competition plus nine other categories including television commercial and production, etc.

ELIGIBILITY: 35mm, 16mm and videotape may be entered in the industrial competition. Films produced in 1970 or 1971 are eligible. Each entry should be accompanied by a statement of purpose and specification of the particular audience for which the film was intended. Entry fee is \$35.

AWARDS: Awards are made for commercially produced and in-plant produced films in the areas of sales, marketing, public relations, training and recruiting. A total of six Gold and Silver Hugo Awards are made in addition to the issuance of certificates of participation for all films accepted in the competition.

SPECIAL FILMS: Industrial film entries which, because of budget, size, multiplicity of images or screens, are termed "special" and treated in a separate category.

SCREENING: Screenings are free and open to the public. This includes three screenings at the festival theater as well as additional industrial film programs at a separate location.

INFORMATION: Address all inquiries to Michael J. Kutza, Director, 7th Chicago International Film Festival, 12 E. Grand Ave., Room 301, Chicago, Illinois 60611.

CINE is supported by interested patrons (associate, professional and sustaining).

THE 19TH ANNUAL COLUMBUS FILM FESTIVAL AND AWARDS

Sponsored by the Film Council of Greater Columbus in association with the Columbus Area Chamber of Commerce

Producers Showcase Screening at Columbus Athletic Club, October 21-22. Chris Awards Banquet: Thursday, October 21 at 7 p.m., Columbus Athletic Club.

ENTRIES: Film producers and sponsors are invited to enter motion pictures produced in 1969, 1970 and 1971 provided they have not been previously submitted to any Columbus Film Festival. Entries (in the categories enumerated below) must be accompanied by 4 x 6 cards (for preview committees) noting type of audience intended.

CATEGORIES & CHAIRMEN: Business & Industry (job training; sales promotion; industrial relations; public relations); Nils Lindquist, chairman, Lindy Productions, Inc., 4784 North High St., Columbus, Ohio 43214. Information and Education (classroom instructional films; specialized instructional, general information); Wm. Schmitt, chairman, Center of Science & Industry, 280 E. Broad Street, Columbus, Ohio, 43215; Co-Chairman, (Social Studies), Glenn S. Bittner, 803 Dimson Drive East, Health & Mental Health (health & hygiene; mental health; general medicine; professional medicine; dental), Florence F. Foyle, Assoc. Professor of Health Education, Ohio State University, 321 W. 17th St., Columbus Ohio 43210; Travel U.S. & Foreign, Daniel F. Prugh, Film Council of Greater Columbus, 280 East Broad St., Columbus, Ohio 43215. Religious Films.

Miss Delores Sherwood, Augsburg Publishing House, Audio Visual Dept., 57 E. Main St., Columbus, Ohio 43215; Graphic and Theater Arts; S. N. Hallock, Chairman, Center of Science & Industry, 280 Broad St., Columbus, Ohio 43215; Filmstrips: John F. Neff, 3820 Simley Rd., Columbus, Ohio 43026. New Student Experimental Film category under Graphic Arts; \$10 entry fee for all lengths of film including both 8mm, Super 8 and 16mm.

AWARDS: This is the 12th years of the Chris Statuette Awards, presented to the outstanding films in each category. Films receiving the Chris Statuette must be voted "best in photography, story value and technical aspects of production." Chris Certificate Awards are given to motion pictures considered "finalists" but not receiving the statuette award.

FOR ENTRY BLANKS: Write to Miss Mary Rupe, Film Council of Greater Columbus, Kresge Bldg., 83 S. High St., Room 408, Columbus, Ohio 43215. Phone: (614) 228- 8840. Phone calls after 4 p.m. may be left with automatic message center.

FARM FILM FOUNDATION PROFESSIONAL IMPROVEMENTS AWARDS

AWARDS: The 17th annual presentation of our inscribed certificate and a check for \$500.000 may be awarded to an active member of the American Association of Agricultural College editors if, in the opinion of the officers of the Farm Film Foundation there are sufficient applications for the award to warrant its continuance in 1971. If such an Award is made, the winner will be selected by a committee of three judges as having made through work in motion picture production the most outstanding contribution to the advancement of agriculture, home economics, rural-urban relations, and the public interest during the past two years. Honorable Mention Awards of \$50.00 each may also be given at the discretion of the judges.

PRESENTATION: The Awards, if given, will be presented at a dinner co-sponsored by the Farm Foundation and the Foundation for American Agriculture at the annual meeting of the American Association of Agricultural College Editors scheduled for July 12, 1971 at Cocoa Beach, Fla.

ELIGIBILITY: Any active member of AAACE engaged in some phase of motion picture production is eligible to apply for the Award.

ENTRIES: All entries and inquiries should be sent to Edith T. Bennett, Farm Film Foundation 1425 H. Street, N.W., Washington, D.C. 20005. Closing date for entries is May 1, 1971.

ANNUAL INFORMATION FILM PRODUCERS OF AMERICA AWARDS

Sponsored by the Information Film Producers of America, Inc., "Cindy" Awards Presented at Annual Meeting of IFPA, San Diego, Calif. November, 1971.

ANNUAL AWARDS COMPETITION in recognition of outstanding information films. The purpose of the IFPA awards is to stimulate constant improvement in the quality of informational, public relations and educational films, and their effective utilization by industry, business, education and government.

CATEGORIES: Public Information, Technical Information, Promotion, Industrial Relations, Education and Enrichment.

ENTRY INFORMATION: Any film completed for release during the period August 1, 1970 through August 1, 1971. More than one film may be submitted by the same member or organization. Entry fee per film is \$25 for members, \$40 for non-members. For additional information, write Film Competitions Chairman, Information Film Producers of America, Inc., P.O. Box 1470, Hollywood, California 90028.

THE 12TH ANNUAL INTERNATIONAL BROADCASTING AWARDS

Sponsored by the Hollywood Radio and Television Society

ELIGIBILITY: Open to radio and television commercials broadcast during 1971 in any nation in the world.

CATEGORIES: Twelve television and nine radio commercial categories. In addition, special sweepstakes awards for both television and radio at annual presentation dinner.

JUDGING: Forty creative screening panels meeting in several countries make initial judging. Final judging panel consisting of 23 judges representing advertising companies, advertising agencies, production companies and broadcasters.

CRITERIA: Excellence in broadcast and television commercial presentation including audio and visual quality, sales message impact, and overall technical skill and techniques.

ENTRY FEES: TV-\$25; Radio-\$20

AWARDS: Special trophy presentations to winners in 12 television and 9 radio categories. IBA awards to approximately 250 finalists in judging. And, a special "Man of the Year" award presented annually to the person judged the outstanding man of the year in international communications.

INFORMATION: Additional information, entry forms and data on past winners may be obtained from the Hollywood Radio and Television Society, International Broadcasting Awards, 1717 N. Highland Avenue, Hollywood, California 90028. Phone: (213) 465-1183.

14TH INTERNATIONAL FILM & TV FESTIVAL OF NEW YORK

October 19-22, 1971
Americana Hotel

PURPOSE: To honor those individuals and companies who contribute to the greatness of the industry with their outstanding creations. A coincidental seminar held during the festival provides a showcase for new developments and a forum for the sharing of new ideas and techniques.

CATEGORIES: Inclusive, encompassing all phases of film production from Filmstrips, industrial films, television and cinema commercials to filmed introductions, titles as well as public service

Continued on next page

FESTIVALS continued

television programs, featurettes and multi-media presentations

ENTRY INFORMATION: Any production completed after September, 1970 is eligible for entry. There is no limit to the number of films, programs or commercials which may be submitted.

ENTRY DEADLINE: September 1, 1971.

INFORMATION: Complete data and entry information is available from Herbert Rosen, festival chairman, Industrial Exhibitions, 121 W. 45th St., New York, N.Y. 10036

PRSA FILM FESTIVAL

BACKGROUND: Sponsored by the Public Relations Society of America in conjunction with its annual conference.

CATEGORIES: Limited to public relations films. Judging emphasis is on PR value of the film plus technical excellence. Additional information and festival criteria for 1971 will be announced at later date.

LOCATION: 1971 awards ceremonies will be held in conjunction with annual PRSA conference in mid-November at the Washington-Hilton Hotel in Washington, D.C.

INFORMATION: For additional data and entry information write PRSA Film Festival, 845 Third Ave., New York, N.Y. 10022.

THE 28TH ANNUAL NATIONAL SAFETY FILM CONTEST

Sponsored by the National Committee
on Films for Safety

ELIGIBLE FILMS: All motion pictures produced or released during 1970 whose primary objectives are safety or which have important accident prevention sequences. Contest entry deadline will be March 5, 1971.

CATEGORIES: Motion pictures, (16mm) in each of five fields: 1. Occupational. 2. Home. 3. Traffic and transportation. 4. Recreational and Sports. 5. General. Judged separately are television and theatrical subjects, TV shorts and spots.

AWARDS: Bronze Plaques will be awarded to top winners in each of the various areas of safety. Awards of Merit will be given to other films for special reasons of subject treatment, production excellence and/or unusual contribution to safety. At the discretion of the judges, awards may be given separately for "instruction-teaching," "documentary," and for "inspirational" purpose films.

One of the plaque winning films may be designed "Safety Film of the Year" and receive appropriate recognition.

PRESENTATIONS: Films winning the Bronze Plaque will be shown Monday, October 25, 1971 in the Grand Ballroom of the Conrad Hilton Hotel during the National Safety Congress and Exposition in Chicago, Illinois. Plaques will be

presented at that time to representatives of sponsors of these films by the Committee's chairman. Award of Merit winners will receive their awards after the final judging which is at the end of April. All winners will be notified immediately after the judging.

INFORMATION ON AWARDS PROGRAMS: Write to Wm. E. Wendland, Secretary, National Committee on Films for Safety, 425 N. Michigan Ave., 5th Floor, Chicago, Illinois, 60611.

TRAVEL FILM FESTIVAL

CATEGORIES: Government produced film featuring travel within U.S.; Government produced film featuring foreign destination; Commercially produced film featuring travel within U.S.; Commercially produced featuring foreign travel; any entry featuring sports or outdoor recreation; any entry featuring travel or vacations using recreational vehicles.

SPONSOR: The Travel Film Festival is co-sponsored by Sunset Magazine and H. Werner Buck Enterprises.

ELIGIBILITY: Any film produced and/or released between January 1, 1971 and December 31, 1971. Films should be 16mm and have English sound tracks or subtitles.

AWARDS: Sunset Trophy and \$500 Grand Prize to entry judged best of all categories. Winner in each category receives plaque. Best three films in each category shown during run of Sports & Vacation Show in several cities.

INFORMATION: For information and entry details write Sunset Travel Film Festival, 1665 W. Katella Ave., Anaheim, Calif. 92802.

U.S. INDUSTRIAL FILM FESTIVAL

Chicago — April 29, 1971
Palmer House Hotel

BACKGROUND: The U.S. Industrial Film Festival was created in 1967 specifically to serve the needs of the industrial film medium. The festival initiated the concept of separating entries by type of producer (see "Organization") and is the only industrial festival offering winners orchestrated color leader film highlighting their achievement.

OBJECTIVES: To highlight the industrial film and its effectiveness as a communications medium; to provide producers, sponsors and distributors an opportunity to showcase their productions; and to enable the industry to maintain an increasing standard of excellence through competitive comparison.

ELIGIBILITY: Entries from any country produced or released within the year prior to the March 1 deadline are invited. Entry is limited to 16mm industrial mo-

NOTE: For entry forms and additional information about any of the festivals listed, please write directly to the festival, not to BUSINESS SCREEN.

tion pictures and 35mm filmstrips produced for industry, associations, government or educational organizations. Entries must be in English, have English subtitles or accompanied by an English script.

ORGANIZATION: Entries are separated by type of production into four groups:

- Commercial productions
- Government productions
- In-plant productions
- University productions

Each entry is judged within its own group. Each group contains 24 identical subject categories. Filmstrips are likewise separated from motion pictures utilizing the same groups and categories.

JUDGING: Entries are rated on a point basis considering such factors as: effectiveness of film; audience motivation; clarity; photography and sound.

AWARDS: Each entry receives a "Certificate of Entry" acknowledging its receipt. One first place "Gold Camera" award is given for each subject category within each group for both motion pictures and filmstrips. Those films not winning a first place award but deemed of festival quality are presented a "Certificate of Creative Excellence." Three special awards are presented each year. They are: The *Business Screen* magazine award to the outstanding Advertising-Sales Promotion film; the *Back Stage Publication* award to the outstanding Public Relations entry and the Chairman's Special award for outstanding creativity.

FILMFEST SEMINAR: This year the festival will conduct a day-long seminar the day of the festival comprised of speakers, panelists and demonstrations of equipment.

ENTRY DEADLINE: March 1, 1971

INFORMATION: For complete details and entry information, write J. W. Anderson, chairman, U.S. Industrial Film Festival, Suite 216, 161 E. Grand Ave., Chicago, Ill. 60611. USA Cable: Filmfest.

11TH ANNUAL WESTERN HERITAGE AWARDS

April 24, 1971 — National
Cowboy Hall of Fame and
Western Heritage Center
Oklahoma City, Okla.

CATEGORIES: Western motion picture, factual television program, fictional television program, documentary film.

ELIGIBILITY: Any individual organization or company may enter its best Western productions in appropriate categories released between January 1, 1970 and April 1, 1971. 16mm films.

ENTRY DEADLINE: January 8, 1971
AWARDS: Winners in each category will be presented a "Wrangler" trophy at annual ceremonies in Oklahoma City.

INFORMATION: Write Western Heritage Awards, National Cowboy Hall of Fame, 1700 NE 63rd St., Oklahoma City, Okla. 73111.

THE MOST HONORED FILMS OF 1970

The Annual "Consensus Selection" of Business Films
Which Received Top Festival Awards in 1970

BUSINESS SCREEN presents and salutes the top award-winning business films of the past year; listed alphabetically with some of their honors on the following pages. We include only those films having received four or more awards during 1970.

This "consensus selection" is a fair and impartial compilation of the awards garnered by the films listed in various national and international (results supplied by the Council on International Nontheatrical Events) competitions.

REVIEWS AND PREVIEWS OF NEW VISUALS

new this month

ASSOCIATION-STERLING FILMS

Discovering the Orient presents a colorful, informative introduction to Thailand, Hong Kong and Macao, Taiwan and Japan. Presented by Japan Air Lines, 26 minutes.

A Day in Tokyo is a fascinating look at the old and the new in the capital of Japan, the largest city in the world. 23 minutes. Color. JAL.

Glimpses of Enchanting Japan looks in on life and customs of the Japanese people surrounded by their country's gorgeous scenery. 30 minutes. Color. JAL.

The Inland Sea of Japan is a journey through the Seto Naikai, a region of blue seas and pine-studded islands so picturesque that poets have described it as "half-Heaven, half-sea." 28 minutes in color. JAL.

Kyoto, Ancient Capital of Japan is an exquisite city that embodies all that is spiritual and cultural in traditional Japan. 28 minutes. Color. JAL.

Building for Tomorrow presents a view from the campus . . . the story of a great university meeting the challenges of today and looking forward. The University of Akron is the subject. 13 minutes. Color.

Aurum. Gold is synonymous with all that is precious, beautiful and affluent. It is a constant theme in mythology, literature and films. This film explores this precious commodity. Produced by Athos Film Productions, Ltd. in association with Gazelle Film Productions Ltd. 29 minutes. Color.

National Football League Action Films, a series of 28 minute films in color, presents an exploration of the world of professional football behind the scenes and on the gridiron. Sponsored by American Express.

The Investor and the Marketplace, 22 minutes, color, was sponsored by the American Stock Exchange. It uses live action scenes at the Amex, graphically-animated sequences and colorful re-creations of the old outdoor market to show relationships between our country's economic system, the investing public and the Exchange itself.

Yeast Dough Shaping Made Easy shows how to turn dough enriched with a new rapid-mix yeast into gourmet treats. Sponsored by Fleischmann's Yeast, the film is 13½ minutes in color.

We Came in Peace was sponsored by Gulf Oil Corporation. Man's dream of conquering space is developed in this definitive documentary of space exploration from Jules Verne to the moon landing by the Apollo II astronauts. 38 minutes. Color.

Land of Japan — Its Traditional Technology. An exploration of the Japanese "folding" culture in which transistorized thinking was born. Lack of space has forced the Japanese to compact everything. 28 minutes. Color. Japan Trade Center.

Japan on Wheels, 27 minutes in color, shows how the Japanese are using nuclear power for medical and industrial purposes. Also tours this beautiful country and shows the newest cars. Japan Trade Center.

Japanese Youth — Opportunity in Industry, Japan Trade Center, is a fascinating study of how a young industrial worker wins an international vocational training competition. 27 minutes. Color.

Japanese Design, 27½ minutes, color, Japan Trade Center. The uncommon art of Japanese design, from many thousands of years ago to the present, is depicted in this beautiful film.

A Tale of Two Cities uses the cities of Tokyo and Matsue to show the variety of Japanese Life. 27½ minutes. Color. Japan Trade Center.

Communication is a series of twenty-six motion pictures which explore today's headlines . . . ethnic issues, the drug problem, leadership, religion, abortion, changing America. Leading figures join together to give a first-hand report on these and other national topics. Guideline Series from the National Catholic Office for Radio and Television.

ATCHISON, TOPEKA AND SANTA FE RAILWAY

Santa Fe Film Library
80 E. Jackson Boulevard
Chicago, Illinois 60604

Moving Unseen Energy, 24 minutes, color. This film examines the use of anhydrous ammonia fertilizer in today's agriculture and shows the building of a 2,000-mile long pipeline to deliver it from the Gulf Coast to the Midwest market area.

The Argentine Yard—A Design for Tomorrow is a story about the operable beautiful lakes and woods, spectacular

tion of Santa Fe's new freight handling facility at Kansas City. The film shows how computers, radar, microwave, and data information systems combine with gravity to make the unique east bound Argentine yard operate nearly automatically. Color.

INDIANA UNIVERSITY

Audio-Visual Center

Bloomington, Indiana 47401

Animals and Swimmers show how "Doc" Councilman studies the swimming movements of animals and applies them to the training of such Olympic champions as Charlie Hickox. 28 minutes. Color. Sale or rental.

Journey Into Nutrition. 25 minutes. Color. Children attending the Little Red Schoolhouse in New York City learn that common nutrient needs are met differently by various countries. Sales or rental.

Cross Country Skiing looks at this sport through the eyes of a twelve year old. 30 minutes. Black and white. Sale or rental.

Children of the World, 28 minutes in color, tells the story of two Indian girls who live in the highlands of Guatemala. Sale or rental.

MODERN TALKING PICTURE SERVICE

The Quiet Home. Through correct, careful planning and sound conditioning, the rooms of a house are built so that noise can be kept at a minimum. This 5 minute color short presents an effective conception in home construction. It was produced by Telecine Film Studios for the sponsor, Acoustical and Insulating Materials Association. For TV.

Moving Unseen Energy. The vital role played in today's agriculture by the chemical anhydrous ammonia is shown in this 23 minute color film sponsored by Gulf Central Pipeline Company. Viewers will also see men and machines building a 2000-mile pipeline across seven states from the Gulf Coast to the Corn Belt. For TV. *Daimyo*. The Government of Kanagawa Prefecture of Japan is the sponsor of a 13½-minute color film featuring the popular year-round resort of Hakone which is located south of Tokyo and close to the magnificent Mt. Fuji. Produced by International Motion Pictures Co., Inc., the film abounds in scenic attractions, such as

PICTURE PARADE continued
mountains, and world-famous hot
springs. For TV.

The Story of Human Enterprise —
Winner of three awards, this 29-
minute color film relates the dramatic
story of one of the world's largest
tree farmers. It shows how foresters
assure a perpetual crop of timber and
the production and use of plywood,
gypsum, pulp, paper containers and
chemicals, as well as beautiful
glimpses of wildlife. A company's ex-
tensive efforts toward air and water
pollution control are briefly covered.
Northwestern, Inc. is the producer
and Georgia-Pacific Corporation the
sponsor. For TV.

Air-cooled Engine-uity. An entertain-
ing film that shows to what almost
unbelievable lengths man will go to
put the 40-horsepower air-cooled en-
gine to imaginative use. In 8 minutes
we see how the air-cooled sportsman
can now seek adventure off the road,
on ice, on rivers and lakes, and in the
sky in an amazing variety of craft
for fun and relaxation. Marathon In-
ternational Newsfilm Service produced
the color film for Volkswagen of
America, Inc. For TV.

The American Elm: Plan for Survival.
The battle to save the American elm
from Dutch elm disease makes a
highly dramatic 28-minute color film.
After a complete and graphic back-
ground of Dutch elm disease, it clearly
illustrates the process of infection
by the elm bark beetle. It also demon-
strates what is now being accomplish-
ed to save these elegant trees from
extinction. Produced at Iowa State
University under Elm Research In-
stitute sponsorship, the film is a spec-
tacle of beauty combined with educa-
tion. The film is available on a free-
loan basis. However, prints can also
be purchased through Elm Research
Institute.

Aerosols, the Timesavers. Indoors in
every room in the house . . . outdoors
in and around the home, schools,
plants and just about everywhere else,
aerosols do a fantastic job in a tre-
mendous variety of ways. This 4½-
minute color film not only shows how
aerosols are made and their extensive
use, but gives very vital safety hints
for the user. Sponsored by the Chem-
ical Specialties Manufacturing Asso-
ciation, the film was produced by As-
sociated Film Consultants.

Safety at the Signal. Empire Photo
Sound has produced an excellent
safety film on automatic signal
changers for emergency vehicles for
the Traffic Control Products Divi-
sion of the 3M Company. By models
and with actual vehicles in operation,
this 13½-minute color short dramati-

cally shows how traffic signals can be
controlled by emergency vehicles to
help them through traffic congestion.
For TV.

The School of the Ozarks. They earn
as they learn at the School of the
Ozarks . . . America's most unique
coeducational college for students
from poor families. Every student
participates in the work program.
This 20-minute color film focuses on
the students as they work, live and
study. It also gives some of the
school's history. The student projects
go round the clock from milking cows
to running a radio station. Calvin Co.
produced the film for the School of
the Ozarks. For TV.

*Kodak & Chevrolet Present the Of-
ficial 1970 All American Football
Team.* The spotlight is on the out-
standing college football players of
the 1970 season in this 29¼-minute
color film. Produced by Tel Ra Pro-
ductions for Eastman Kodak Com-
pany, it documents their abilities with
exciting game action sequences. For
TV.

Network. "Hot" and "cold" color . . .
flowing split screen action . . . moody,
mind-probing score are key elements
of "Network." It is a thrilling look
into the ebb and flow of the myriad
communications on which mankind
depends in the 1970's. This 14-minute
color film was produced by Owen
Murphy Productions and the sponsor
is American Telephone and Telegraph
Company. It is for theatrical distribu-
tion.

Amish Farm and House — One steps
into yesterday in this 9-minute color
film and visits a quaint old Amish
farm and house in the Pennsylvania
Dutch county . . . old stone house
. . . operating farm . . . animals . . .
crops . . . garden . . . Conestoga
wagon . . . blacksmith shop . . . old
Amish buggies . . . covered bridge.
Produced by Sam Schulman Produc-
tions, this delightfully entertaining
short on the Amish way of life is
sponsored by Amish Farm and House.
It is for theatrical distribution.

Through the Mill — The Mill is a
spectacular exhibit — a replica of a
real textile mill — in Burlington
House, the new headquarters for Bur-
lington Industries in New York City
To help publicize this outstanding at-
traction, Burlington has sponsored
this 13½ minute color film of a
group of excited youngsters "going
through the mill." The film was pro-
duced by Jacoby/Storm Productions;
the exhibit was designed by Chermay-
eff & Geismar, whose work includes
the U. S. Pavilions at Expos '67 and
'70

NATIONAL AUDIOVISUAL CENTER

Are Drugs the Answer discusses the nature and harmful effects of various kinds of drugs, such as the psychedelics, speed and marijuana. Features Dr. Alan Cohen, former disciple of Timothy Leary and now a crusader against drug abuse. Produced by the National Institute of Mental Health. 20 minutes. Color. For sale or loan.

Demand to be Heard depicts in film-o-graph form the demands of recipients of services for a voice in planning programs which affect their lives. Produced by the Social and Rehabilitation Service. 28 minutes. Color. For sale or loan.

Don't Leave It All to the Experts, 28 minutes in color, outlines the main points of the air quality act and shows a public hearing in session. Explains individual responsibility and attempts to motivate the public to take an active role in bringing about clean air. For sale or loan.

Goodbye Mrs. Pilgrim documents the story of Lavalley, St. Louis, where Union Local 688 undertook a community wide rehabilitation job. Shows warm cooperation between people in order to mend areas of social damage. Produced by the United States Information Agency. For sale or loan. 39 minutes. Black and white.

Preparing for Tomorrow's World, 26 minutes in color, examines career possibilities for high school science students in the field of nuclear science. Produced by the Atomic Energy Commission. For sale or loan.

Renaissance of a City describes the efforts of the mayor of a small rural city (Erie, Pennsylvania) to develop community cultural interests which would attract residents and visitors to the city. 18 minutes. Color. Produced by the United States Information Agency. For sale or rental.

Massive Tourist Influx Has Devastating Impact on Parks

An ironic personal comment on ecology and man's capacity for despoiling his natural environment while remaining indifferent to it is presented in *Pave It and Paint It Green*. The 27-minute film, without narration or commentary, contrasts the grandeur of Yosemite with the activities of the hordes of tourists.

Transitions from black and white to color, as well as time-lapse, speeded-up sequences, are used for poetic and satiric effect. For sale or rent from the Extension Media Center, University of California at Berkeley.

MUSIC AND SOUND EFFECTS:

Essential tools of the professional Film Media Producer

"MAJOR" offers you a full 73 hours of background production music for titles, bridges, background—for scoring, editing, recording and dubbing music for your:

- DOCUMENTARIES ● COMMERCIALS
- TV FILMS ● FEATURE PRODUCTIONS
- SLIDE FILMS ● INDUSTRIAL FILMS
- ANIMATION ● SALES PRESENTATIONS

"MAJOR" specializes in sound—you get exceptional technical know-how and beautifully recorded original music on LP records or 1/4-inch tape, or on 16 or 35mm Mag. Tape ready for a mix.

IMPORTANT: "Major" owns its own copyrights on all production mood music in its library. World rights available to you on a completely sound legal basis. Re-recording rights on a "per selection" basis or "unlimited use" flat fee arrangement.

FEATURING NEW EQUIPMENT AND SERVICES

production

Instant Mounting System for Still, Movie Cameras

The Snaplock, an instant-mounting system for all type of cameras, combines rapid, fail-safe operation with ruggedness and precision alignment for day-in, day-out professional use.

It is a two-piece unit machined from solid aluminum for light weight and high rigidity. One section mounts on the camera; the other, which has a safety release

button to prevent accidental opening, mounts on tripods, body braces, etc. Both pieces offer four mounting holes for exact positioning, to insure optimal balance, and broad, flat mounting areas for best support. The base unit accepts both $\frac{1}{4}$ " and $\frac{3}{8}$ " screws and extra screws store within. *Cine 60, Inc.*
circle 200 on reader service card

Colortran Introduces a Portable Power Supply

The lightweight Power-Pro is a compact, portable power supply which provides 25 minutes continuous operating time. It recharges overnight (120 or 240 V AC) and is self-contained in its own charger/travel case.

Features include a state of charge meter, form fitting housing,

padded adjustable shoulder strap, and transformer isolated from line preventing accidental shock. The Power-Pro is also available in a special kit which includes the Mini-Pro light. *Berkey-Colortran.*

circle 201 on reader service card

Clear Efficient Scheduling for Shooting of Any Production

The Hollywood Production Board is a lightweight compact portable folding production board suitable for studio or location work. These 4 panel boards use the standard 15" strips and header and give you 36" of workable space.

The board is designed to fit a standard attache case. Strips may be easily removed and quickly transposed to reflect any changes during production. *Hollywood Production Boards.*

circle 202 on reader service card

Dynair Adds Vertical-Interval Production Switcher

Dynair Electronics has added a low-cost vertical-interval three-bus mix/effects production switcher to its line of professional video programming equipment. The VS-152A is completely solid-state and

has all the capabilities necessary for professional programming, including instantaneous switching, fade-in, fade-out, lap-dissolve, superimposition and special effects.

The switcher accepts six non-composite and two composite video inputs. *Dynair Electronics, Inc.*

circle 203 on reader service card

Computer-Type Editing for Helical Scan VTR

The Rombex Edicue, a device for editing with helical VTRs, uses a semi-automatic computer-type technique which allows consistent editing accuracy up to 1/10th of a second. It is normally supplied for use

with Ampex 7800 VTRs but may be modified for use with other 1" editing helical scan VTRs.

The required editing points are found manually by the editor, then the Edicue unit takes over to back the machine up several seconds, play them down together and switch

the master recorder into record automatically. A "rehearse" mode makes it possible to preview the edit without actual recording on the master edited tape. The Edicue is available for rental. *Rombex Productions Corporation.*

circle 204 on reader service card

Beaulieu Introduces Endoscopic/Science Research Camera

A specially designed Beaulieu 16mm Reflex Control Camera is ideal for endoscopic motion picture studies as well as other scientific research applications. The medical camera operator can easily manipulate the entire camera, turning it slowly to meet the complex and changing photographic requirements at all times. Light control is simple.

Special circuitry interconnection permits the operator to compensate automatically for change in light

conditions. A clear viewing spot on the ground glass is the same size as the endoscopic image and allows

clear unimpeded viewing. Repositioning of the Remote Control outlet allows easier access to the camera controls when filming with the on-off switch remotely controlled. For further information, write *Herzic Corp/Cinema Beaulieu*, 14225 Ventura Boulevard, Sherman Oaks, California 91403.

TV Camera System Sees in the Dark

Spectran's Night Hawk TV camera sees in total darkness providing a picture as bright and clear as one taken under standard lighting. The system also performs well in visible light.

It consists of a IR source, a standard CCTV camera, and a tube

mounted on the camera which converts infrared light to visible light. A variety of spotlights and floodlights and a comprehensive range of lenses are available. *Spectran, Inc.*
circle 205 on reader service card

Modular TV System Provides Maximum Versatility

The Dage 800 television camera is compact and self-contained, and weighs only 15 pounds. It is switch-

selectable for random interlace or external drive. A third position of the switch selects another drive mode, which can be crystal-driven horizontal, 2:1 interlace, or EIA RS-170, depending on the sync generator desired. Sync generator cards are plug-in modules and can be interchanged with the camera control unit to provide a wider range of operating modes. The camera is convertible to 525/60, 625/50, 873/60 and 945/60 line-scan rates.

The camera is the basic module in a TV system which can be expanded to suit the users needs. *Visual Educom, Inc.*

Filmstrip Sound Projector Combinations

Two fully automatic filmstrip sound projectors with built-in 30/50 cycle circuit feature solid-state circuitry with silicon transistors for wide frequency response; accurate 4-speed gear drive turntable; dynamically balanced tone arm with safety

lock, and all-speed flip-type cartridge; built-in receptacle for projector.

The model 40 is for audiences up to 75 people and has a 6" remote speaker with 25' cable. The model 60 has a built-in screen for small groups or study carrel. *Standard Projector & Equipment Co.*

Narrator Permits Preparation of Automated Sound/Slides

The Montage/Narrator 850 is a tool for the preparation of sales and promotion programs. It is a self-contained compact cassette audio synchronization system designed to

present fully automated sound/slide projectors.

Synchronization is achieved in-machine by means of electronic pulses. With a continuous loop cassette, the Narrator is practical for unattended, repeating sound/slide presentations. *Montage Productions, Inc.*

HELPFUL BOOKS AND LITERATURE

Four Decades of Sound Movies FILMS IN AMERICA 1929-1969, by Martin Quigley, Jr. and Richard Gertner. \$12.95. Published by **Golden Press, 850 Third Avenue, New York 10022.** Although *Films in America* deals entirely with theatrical films, it is a fascinating book for anyone with an interest in and love of films and filmmaking. It discusses every aspect of the forty years of sound movies, from the stars and the movies that made them (and vice versa) to the economic ups and downs of this precarious business.

The authors cover nearly 400 notable screen works and incorporate more than 400 well chosen stills.

Audiovisual Design Programs

How to design a new facility which will include projection equipment is the subject of three new visual communications programs from Kodak. "Designing for Projection," "Multimedia Classroom Facilities in Higher Education," and "A Tour of the Kodak Atlanta Marketing Education Center" point out to the educator and architect alternatives for designing a facility.

Each program includes slides, an illustrated script, and a 1/4" stereo

tape with sound on track one and slide change signals on track three. The programs are available for loan or purchase from *Eastman Kodak Company, Audio-Visual Service, 343 State Street, Rochester, New York 14650.*

Customer Training Program

A 12 page brochure describing its customer training service programs is available from Ampex. The brochure describes the training courses offered to all users of broadcast, closed circuit television, CATV and instrumentation equipment.

Courses cover four product areas: broadcast video, closed circuit television including CATV, instrumentation and professional audio. *Ampex Corporation.*

Report on Video Cassette Market

A definitive assessment of the developing video cassette industry has been published by Edubusiness, the bi-weekly management newsletter devoted to development in the education and training markets. The study examines all key aspects of the equipment, software and markets of an industry whose sales are expected to exceed \$1 billion by 1980.

One section of the study compares playback systems presently available or under development, including videotape, miniaturized film, vinyl tape and discs. Another section provides a company-by-company report on software. *Edu-business.*

... "A" BETTER IDEA! !! The definition of the terms "A" and "B" in motion picture nomenclature is ambiguous. "A" and "B" can refer to multiple rolls prepared for effects printing and/or to eliminate visible splices. "A" and "B" is also used to refer to the type of wind of single perforated 16mm raw stock as supplied by the film manufacturer. Another use of the terms is to identify the image-emulsion position of a piece of film already processed. Three different meanings for the same term naturally cause confusion, so what standards can the industry adopt that would eliminate the present ambiguity with the least amount of confusion? As editors often use more than two rolls to achieve the effects desired, or to preserve the original film in an uncut condition, additional letters following "A" and "B", such as "C", "D", "E", "F", etc., are needed. I suggest this use of the terms for printing rolls should be continued without change.

I recommend that the use of "A" and "B" in reference to the type of wind of raw stock be discontinued and other letters substituted. Reference to the American National Standard ph22.75 indicates: "... When a roll of motion picture raw stock is held so that the roll of film is above and away from the observer and the film end unwinds from the side of the roll which is toward the observer and down, winding "A" shall have the reference edge of the film (the edge closest to the perforations) along the left side; winding "B" shall have the reference edge of the film along the right side." My recommendation is that the letter "L" be used to identify the left side (now "A" wind) and the letter "R" to identify the right side (now "B" wind). As raw stock winding essentially concerns only laboratories and sound recording studios whose personnel are already quite familiar with the use of both winds, this change in identification should present no problem.

Normally, the film manufacturer supplies 16mm raw stock with the emulsion side of the film *in*, toward the center of the roll, but the emulsion position should be indicated on the label of the can, preceding the letter "L" or "R". The code letters "EI" would identify emulsion side *in* and "EO" emulsion *out*. Adopting the letters "L" and "R" instead of "A" and "B" would actually be an improvement because the letters themselves specify the perf position.

The next use of the terms is in reference to image-emulsion position. Originally, both 35mm and 16mm silent film had perforations on both edges. When optical sound was introduced to 35mm, the track was placed inside and adjoining the perforations on one side, which decreased the size of the picture area. On the smaller gauge 16mm film however, it was suggested that one row of perforations on one edge be deleted in order to make room for the new optical track. This resulted in no sacrifice of picture size. The newly engineered 16mm sound projector, of course, had to have sprockets with teeth only on one side. So, it was impossible to flop the film over because the single perforated edge would be on the wrong side. Two things were necessary for the new sound track—it had to have the perforations on the correct edge of the film, and the emulsion position must be compatible with the picture negative.

The film manufacturer supplies raw stock in two winds—"A" and "B". If negative film is exposed in the camera, then "B"-wind raw stock must be used when recording the appropriate negative sound track. The winds "A" and "B" were very new to the trade so a lot of confusion resulted. No suitable standard existed for indicating the emulsion position of *developed* film. For want of a standard, the industry improvised and made its own. The emulsion position of the picture film, even though double perforated, was often referred to in the same term as the wind of the raw stock used when recording a sound track with the correct emulsion position for printing with the picture film.

For years I patted myself on the back because I considered myself an authority on image-emulsion position. This education was a costly one, because in 1941, before the advent of magnetic tape, I personally went on a three day location recording job and used the wrong wind raw stock. After that I made it my business to understand the winds thoroughly. After the war many producers were making similar mistakes, so in 1948 I wrote a series of technical articles, one of which was on "A" and "B" wind. Later I rewrote my article for the Handbook of the Association of Cinema Laboratories. In the handbook I accepted the erroneous use of the terms because it was the easiest way to explain it. Now, however, with the confusion between three meanings for the same terms, I suggest we drop the use of the terms "A" and "B" in reference to image-emulsion position and adopt another standard.

A simple solution to the problem would be to think in terms of the first piece of equipment that is used to photograph our subject—the camera, and the last piece of equipment—the projector. When film is threaded into a camera the emulsion always faces the lens, so why not call this position—"forward," emulsion away from the lens would be called—"reverse." When projecting the camera film after processing, it is also necessary to place the emulsion again *toward* the lens so that our image will appear with the correct orientation as to right and left. If we photographed a right-handed batter and projected it with the emulsion in the "forward" position, the image on the screen would appear to be batting right-handed. This silent film has perforations on both sides so it really has no designated wind. If we make a contact print of our camera film, the emulsion of one film is in direct contact with the emulsion of the other and therefore forms a mirror or "reverse" image (erroneously called "A" wind). If we project this print, it will be necessary for us to thread the emulsion of the print away from the lens or in the "reverse" position so our right-handed batter doesn't become a switch hitter.

Remember—"forward" image-emulsion position is always *toward* the lens, and "reverse" is away from the lens. Simple, isn't it?

Our industry should modify the meanings of the terms "A" and "B", but in order to avoid confusion I recommend that all three problems be attacked at the same time.

PLUS—
THE CASSETTES
ARE COMING

Is your press release being watched?

Remember the public service spot for the American Heart Association you saw on TV the other night?

Or the film clip about that new car on the evening news?

Press releases like these give you a unique opportunity to bring your message to the largest possible audience in the most convincing climate.

And now Modern—the largest distributor of sponsored films to television—is offering a new service to help you get the best possible coverage. We call it the Modern TV Newsfilm Network. Here's how it works:

You supply us with 16mm-sound footage. Plus a script for TV commentators who prefer to do their own narration.

We'll take it from there. To hundreds of television stations that use these film clips regularly. (We know, because we work with them all the time.) And at the end of 60 days, we'll send you a report of which stations used your film, and how many people saw it.

Want to know more? Call or write for our free TV Newsfilm Kit. It's available for immediate release.

If you can't come, write.

We created this new audio visual showroom especially for you. In it, you'll find the most sophisticated equipment available today; everything from rear screen projectors to closed circuit television systems. Loaded with film or tape and ready to operate. But if you can't come, write for our new catalog.

Besides representing most of the leading manufacturers of A-V equipment, we have one of the largest rental inventories of projectors anywhere.

You can rent from us by the day, the week, or the month.

Or you can buy from us.

In either case, we brief you on the available equipment. Familiarize you with the way it works. Assist you

in selecting the projector best suited to your needs. And put the entire package, film and projector, in the hands of your salesman.

Visit our new showroom and get the complete picture.

But if you can't come, write for our new catalog: Projection Systems International, Dept. BS-JF, 305 East 45th Street, New York, N.Y. 10017

gleanings

BY LON B. GREGORY

Some Exciting Prospects

It is extremely likely that our chart (page 26) comparing the various cartridges systems will be obsolete by this time next month. In the ever-changing cassette arena, it is becoming increasingly difficult to even guess what might happen next. But it was notice from Japan of the agreement amongst three of the largest potential videocassette manufacturers on a color cassette standard that leads us to believe that many of the systems specified on page 26 will not ultimately be marketed as indicated.

With the color cartridge standard agreed to by Sony, Victor and Matsushita (Panasonic), it stands to reason that others will follow the meaningful lead in this direction. The universal adoption of such a standard would undoubtedly mean more business faster for all of the manufacturers of the videotape systems involved. The move represents a solid step forward in the confusing area of videocassettes.

And confusing it is. After reading what several of those deeply involved in the manufacture or use of the systems have to say in this issue, and what those we surveyed had to say (page 23), the only positive conclusions that could be drawn were: (1) Almost everyone is interested in and excited about the potential of videocassettes; (2) industrial users want to see and learn more about the systems before making any large commitments because (3) it is generally *agreed that some workable standard is needed.*

One thing is very certain. The cassettes are coming and the real pot of gold from the manufacturers point of view is the consumer market at some time down the line. And, depending on what you read and who you choose to believe, that pot of gold is a market somewhere between \$1 billion and \$12 billion by 1980.

Before that time, however, we anticipate widespread use of the cassettes in industrial and corporate situations . . . the real "shakedown period" for the systems if you will. Industrial users will undoubtedly use them, improve them and establish the lasting guidelines.

Whether the announced cassette systems represent the end or beginning of even more sophisticated systems depends on your point of view. Regardless of the eventual outcome, they now represent exciting prospects for nearly every part of the audiovisual industry.

Lon B. Gregory

**Gevachrome TV prints don't look live.
Except when they're screened.**

The director wants the colors to create a mood. The scenic designer picks the exact hues. The make-up man picks the perfect tints and shades. The lighting and camera crews get everything right. And the TV screen can destroy it all.

Unless the TV print was made on Gevachrome T 9.02. It's the reversal print film that lets the lab vary the gamma, and produce a low-contrast print that's perfect for

TV transmission; a print that reproduces the tones you worked so hard to get.

Gevachrome T 9.02 can have either a silver or sulphide sound track, and can make 16mm reductions from 35mm color prints. Processing can be done locally by using Gevachrome prepackaged chemistry.

And even with all these features, Gevachrome is less expensive to use.

The next time you need that print specifically for TV use, or for

direct projection, bridge the duplication gap with Gevachrome T 9.02.

**Read about our fight against film pollution
in Sixteen and Eight.**

Dirt can ruin a film.

And our business is printing and processing 8mm, Super 8mm and 16mm for motion picture release prints.

That's why we've put a highly sophisticated air-control system in our printing and processing rooms, cartridge loading room, and every room where your film is exposed to air.

In this laminar-flow system, air comes from thousands of tiny holes

in the ceiling. It forces dirt and dust particles down to the floor level and out the exhaust exits.

That's why we've recently installed a unique pre-coat water filtration system in our processing department.

Unique because this system filters water to one-millionth of a meter. Result: Incredibly pure water.

Dirt.

We won't let it pollute your films.

REPORTS ON CURRENT EVENTS AND TRENDS

NAVA A-V Selling Institute Operates under New Name

The 23-year-old National Institute for Audio-Visual Selling sponsored by the National Audio-Visual Association will be operating under a new banner this year.

In announcing a broader NAVA training program, the planning committee unveiled the new name for the sales training program.

Boasting courses from basic salesmanship to systems engineering, the *NAVA Institute for Professional Development* (as it's now called) will be held as usual in Bloomington, Indiana, July 11-15. Details on the institute are available from NAVA, 3150 Spring St., Fairfax, Va. 22030.

AFI Announces Five Filmmaker Awards

The American Film Institute has awarded a total of \$15,800 to five independent filmmakers, according to an announcement today by George Stevens, Jr., AFI director. This is the seventh time in three years that the awards have been made under the AFI grants program. The films of those selected range in content from contemporary social problems to experimental and animated subjects.

The recipients of the Independent awards are: Patricia Amlin, 33, of San Francisco, for *Autopsy of A Queen*, a documentary film fusing the historical with the present to capture a slice of essential Americana (\$2500).

Richard Bay, 22, of Nashville, Tennessee, for *Implosion*, a dramatic film about a young alcoholic who finally commits suicide (\$800).

David Brain, 29, of Glendale, California, for *Mr. Businessman*, an animated film which makes a slapstick comedy statement about the inhumanity of business ethics (\$4,000).

Andrew Burke, 22, of Yellow Springs, Ohio, for *Brown Rice*, a dramatic film describing the mishaps of two youngsters enroute to visit their friends (\$2500).

Caroline Leaf, 24, of Cambridge, Massachusetts, for "*M*," an animated film which tells the story of a man who knows something which makes him different from everyone else (\$6,000).

Duplication, Distribution Firms Prepare for Video Cartridges

Recognizing the possible potential of the duplication, cartridge loading and distribution service for the emerging videocassette market, several companies have already prepared themselves to handle the requirements.

Bonded Services and Garden State/Novo, both subsidiaries of Novo Corp., are combining their technical and distribution talents to service the field in offering "complete" physical handling services for all equipment manufacturers, producers and distributors of cartridge video programming."

Unfazed by the multiplicity of formats, Bonded VP Mort Wolson figures, "Manufacturers have to decide now about what they are going to do in duplication. They can't wait." He adds that his company "has the machinery, know-how and personnel to perform all of these services for the video cartridge market.

On the opposite coast, Tele-Cassette Enterprises is also ready

and underway, with the added potential of actually creating programs specifically for the video cartridge market. Ken Fritz and Rosalind Ross at Tele-Cassette are ready to handle the whole software ball of wax for video cartridge clients.

Still another is Videorecord Corporation (see feature in this issue).

Undoubtedly other service companies presently loading Super 8 cartridges are also preparing for the video market.

Atlanta Festival Plans Trade Fair, Symposiums

The Atlanta International Film Festival is planning to again hold an equipment exhibition and seminars during the week of the festival as it did last year.

Festival Director J. Hunter Todd reports that there will be no admission charge to the exhibits and no charge to companies participating in the exhibition. He added that it is his belief that the exhibit will grow into the largest trade fair of its kind in the country.

Entries Sought for Animated Film Exhibition

Film makers in all graphic techniques are being encouraged to submit films to the Animation Selection Committee for entry in the Sixth International Animated Film Exhibition. Entries will be selected by the Committee at the Los Angeles County Museum of Art on February 10 and March 9. March 8 will be the final date entries can be accepted.

The annual Animated Film Exhibition will be held again this year in the Museum's Leo S. Bing Theater.

NEWSREEL continued

ater from April 2 to April 25. Following the Exhibition, the films will circulate under the title of the International Tournee of Animation to a continent-wide audience of campuses, art centers, museums and community film events.

For additional information, write the Los Angeles County Museum of Art, 5905 Wilshire Blvd., Los Angeles, Cal. 90036.

OEO Grants \$675,000 for Training Filmmakers

The Community Film Workshop Council has been awarded a \$675,000 Office of Economic Opportunity grant to continue the Television Careers Training Program begun last year, which placed 25 young filmmakers as TV cameramen.

The aim in providing the grants is to create a vehicle for minority and low income people to gain entry into the broadcast media.

The workshops are established at various sites around the country as community based outlets for filmmaking activity of minority and low income individuals.

Nationwide Service Set for Motorola EVR Teleplayers

A national network of about 400 independent service organizations has been established by Motorola Systems, Inc., for its EVR Teleplayer.

Qualified service anywhere in the country will be provided very soon through the company's service facilities. The service will be available from Motorola regardless of how the Teleplayer units were distributed.

Singer's Graflex Division Acquires Radiant Screens

The Singer Company's Graflex Division (Rochester, N.Y.) has acquired the rights of the Radiant Screen Line of Morton Grove, Ill. for an undisclosed amount of cash.

Radiant's 160,000 square foot production facility in Morton Grove will be retained by Graflex and placed into full production shortly.

Harvest Films Begins Distribution Subsidiary

New York's Harvest Films, Inc. has formed a distribution subsidiary "to enable us to service increased cus-

tomers more efficiently than ever," according to Leo Trachtenberg, president.

The new subsidiary, Harvest A-V will provide 16mm and 35mm distribution services as well as EVR cartridge systems and other developing cassette systems.

Catalyst Environmental Films Formed by Publisher

The publication Catalyst for Environmental Quality has formed a film division in association with United Press International's UPITN Productions.

The new division at 274 Madison Ave., New York, offers a complete film production service to any firm or group concerned with environmental projects.

Presidential Citation to Kodak for Export Sales

Continued success with export sales by Eastman Kodak has garnered that company another "E Star" Presidential Award.

The highest award granted to industry by the U.S. government for Kodak was announced by Secretary of Commerce, Maurice H. Stans, and will be officially presented to Kodak Chairman Dr. Louis K. Eilers at ceremonies May 15.

The "E Star" is part of President Nixon's program to expand U.S. exports. Kodak received its first "E Star" in 1964 for the same reason.

Briefly Noted

The John B. Olsson Company, specialized production equipment company, has moved to larger quarters at 945 N. Main in Orange, California . . . New York's VPI Color Center has more than doubled its volume of post production services as a result of early 1970 expansion . . . F&B Ceco in New York has added \$250,000 worth of new equipment for rental mostly in new cameras with the goal of ultimately replacing every Arri or Eclair more than 18 months old . . . Maier-Hancock Industries, splicer manufacturers, have moved to larger facilities at 13212 Raymer St. in North Hollywood, California . . . The newest production house in Dallas is Mulberry Square, formed by Joe Camp and Jim Nicodemus, both veterans of the Dallas film scene .

"If human life has, in itself, no meaning then our first priority must be to give meaning to it by elevating it, by cleaning it from fear and hatred, slums, ghettos, hunger, ignorance and disease, by cultivating all that is good, great and beautiful in us."

The forty year Revolution.

CALVIN PRODUCTIONS.

The "revolutionary" communications company.

It began in the thirties, when CALVIN brought about the national acceptance and widespread use of the 16mm film format for commercial purposes.

Later produced the first 16mm sound film in full color.

Then developed one of the first portable 16mm sync-sound magnetic recorders.

Today, CALVIN continues to revolutionize the film industry with new ideas, advanced technology and using the best equipped production and lab facilities anywhere.

Like one of the most sophisticated sound mixing systems. And two of the largest sound stages—one a "cyclorama"—between the coasts.

If you could use a little help from a friend with any film communications assignment, write for our free booklet "So You Want To Make A Film."

It may revolutionize the approach to your next film.

(Ed) Fixari** is the marketing manager for Motorola's new Teleprogram Center, acquisition and distribution arm of the company's education and training products unit . . . **Jacques Letellier**, who has shot more commercials in more countries than any other director-cameraman, has joined New York's MPO Videotronics . . . Heading the new customer service area for VPI Services is **Joe Miraglia**, veteran post production and distribution expert . . . **Edwin Cooperstein** has been appointed general manager of Canyon Films . . . Alderman Studios writer **JoAnn Francis Gray** was recently honored as one of "the foremost women in communications" for her non-fiction work in writing and publishing . . . **Herbert S. Schlosser**, program VP-west for NBC has been named chairman of this year's International Broadcasting Awards . . . TeleMation, Inc. has named **Olcott (Bud) Mills** manager of its Atlanta regional office .

Show Films Where the Action Is

This year of opportunity: 1971 doesn't need any more predictions. What you can do is size up *real potentials*, spend more time in analysis *not* "psycho" (though you may often feel the need) and seize upon workable, fruitful ideas.

For industry's communicators: the seat of power remains in Washington, D.C. where the actions of the 92nd Congress will be closely watched. You have noted that, despite that hectic and unproductive final month of the 91st, the Congress voted to permit spending up to \$24.8 billion for school aid in three years; provided subsidies for 300 new merchant ships (by 1980); created a semipublic National Railroad Passenger Corporation to take over operation of the nation's passenger trains and set strict federal standards for job safety in industry and mines.

There are *communication potentials* in such federal actions. As, for example, in that Congressional bill authorizing \$63 million to promote railroad safety. Under the Senate passed measure, Transportation Secretary Volpe would write rules and regulations for railroad operations, including transport of hazardous materials.

And what is your company (or trade group) doing about communicating to influential agency and bureau personnel in Washington? Are you showing *filmed answers* on critical subjects like improving minority relations, anti-pollution measures taken, safety actions, job creation, etc. to the many thousands of decision makers in the Washington area.

All right, *know this*: experienced showmen like Wilson Gill and other audiovisual specialists in booking and showing sponsored films in and around Washington, D.C. can deliver *responsible films* to all kinds of audiences: clubs, lodges, commit-

tee rooms of Congress, church and PTA groups. In these audiences, as well as via *local TV* and in neighborhood theaters, *are the people you must reach*. They and members of their families are among the long-time Washington "regulars," the too-often career people as well as elected representatives of the people.

Got something *honest, forthright and truthful to say*? Then put it up there on the screens, large, lighted and convincing! Or will you "leave it up to Nader" and his eager, young and zealous attack force with the "big charge" and its too-often half-truths?

"Marginal Survival" Afflicts 16.5 Million Citizens Who Can't Read

We can't overlook that most significant survey conducted by the Louis Harris Opinion Poll last year which revealed that approximately 16.5 million Americans 16 years of age and over fall into what the Harris organization calls a "marginal survival status" — simply because they don't read well enough to function effectively.

Our nation's functional illiterates can understand sight/sound media if we'll get the tools to them: in drive-ins, churches, community halls and such. But the figures out of this survey had better be noted:

Over 4 million could not read well enough to qualify for public assistance on welfare.

A much higher 10 million would have trouble qualifying for Social Security.

Over 11 million could not qualify for a driver's license. (Hey there GM, Ford, Chrysler and American Motors!)

A higher 14 million could not qualify for a bank loan, not reading well enough to answer several key, elementary questions.

And a substantial 48 million people have a sufficiently serious reading deficiency to keep them from properly qualifying for Medicaid care.

But they still *vote*, put that "X" into the ballot boxes, *strike* when their union chiefs tell them to, and influence America's future for good or ill. The obvious contribution a public-spirited corporate sponsor should make is to provide the nation's classrooms with reading-skill media. Or reach all these people we can through channels of sight/sound communication with factual films.

Our Expanding Youth Population as Job-Seekers and as Voters

The "movies that move people" are getting to another vital segment of U.S. population, where the growth-action is becoming a *two-fold area of potentially vast PR significance*. We refer to "the young working-age segment which is growing at an abnormally rapid rate in the years ahead."

While our overall population in the U.S. should increase about 12 per cent, as it did in the 60's, the age group between 18 and 24 will expand by some 25 per cent, and the 25-to-34 group will grow by nearly 50 per cent. That's the bumper World War II baby crop growing up. And they can be reached by your films!

Match that up with combined Congressional and Supreme Court decisions allowing 18-to-21 year olds to vote in future national elec-

tions. Youth groups and civic organizations (audience potentials) are already moving to spur registration and voting by these young people.

The states will also be moving to liberalize age and residency requirements to permit the same age groups to vote in state and local elections though only eight of them now permit under-21 voting.

Show Them the Truth and Let Them Make the Decision

At 73, movie-great Frank Capra was in Washington recently to speak at the National Archives' showing of World War II films, including many of the documentaries he directed in that era. We'll never forget the *Why We Fight* series among which *Battle of Britain* and that tremendous Russian epic are most memorable. Capra worked for Columbia until 1942 when he joined the army to make films for General George Marshall's Special Services Unit.

When he spoke at the American Film Institute, introducing his film, *Mr. Smith Goes to Washington*, the old master said:

"General Marshall was working with undernourished, undereducated recruits. One day he said to me, 'I think these boys can do the job if they know what the hell it's all about — if the reasons we give them are worth fighting for.'"

"So I made one decision: to show people what the truth was about the war and let them decide for themselves."

Now if somebody up there in the Defense Department had only said, "let's show our people what it's all about in Vietnam."

And/or take it to the home front and tell us why this great nation needs to drift along in confusion, doubt and ignorance with all that remains to be done . . . "ask not what your country can do for you, but what you can do for your country."

Tips on Surging Cable-TV and A "Private Eye" for Training

to originate and project (films) its own programming.

Looking for the simplest "one-to-one learning system?" Think about and try out Vidicom's "Private Eye" the brain-child of prophetic, practical-visionary Charles "Cap" Palmer. This is a complete "sound movie theater" you can hold in your hand, plus the advantage of interpolating stills or stripfilm sequences. Cordless, lightweight and low cost: only \$89.50. Better write Vidicom Information Systems at 2625 Temple Street, Los Angeles, Calif. 90026.

Public TV: the Fourth Network & Some Items That Needed Print

More figures to think about: the U.S. "fourth network" public and educational TV has grown to an affiliation of 198 stations in 48 states. More than 8 out of 10 U.S. families now have sets that can receive these public-television stations. Their program chiefs welcome *honest, factual* sponsored films on key public interest subjects.

More than 250,000 college students in the U.S. operate, without pay, 1,000 programs for mentally-retarded children; more than 200 American corporations donate tools and money to 140 schools in Latin America to help train 150,000 students "to earn a self-supporting, self-respecting future more friendly to the United States. And in 160 American cities 18,000 businessmen act as Big Brothers to young lads who lack and desperately need that sort of counsel, friendliness and help."

The Credo of This Columnist

It's appropriate, we think, to close this month with a quote from the president of San Jose State College. Speaking to members of his faculty about the role of the college and university in today's world, John H. Bunzel said:

"... the truth is that none has any existence or reality without a past. One function of the university is to help discover what is new. But another is to preserve and reclaim the old for each new generation. These dual tasks create continuous tension between the demands of continuity and the demands of change."

We think of this as pretty akin to a Credo for Camera Eye. **OHC**

This 4-inch attache case turns any office into a movie theatre in less than thirty seconds

It's the Bohn Benton Institor; an elegant, rear screen (also front screen), Super 8, sound and motion picture projector.

It's light, only 17 pounds.

It's simple to operate. In less than 30 seconds, you can have it set up and running in broad daylight.

It's cartridge loaded. There's no film threading.

It's an attache case. Easy to carry. Just 4-inches wide.

And it's sensibly priced. \$300 for single units. Or as low as \$240 in quantities.

Write today for our new brochure: Bohn Benton Inc., 110 Roosevelt Avenue, Mineola, New York 11501.

paradox

BY STANFORD SOBEL

PARADOX: In taking a public stance, we enthusiastically support every important technological advance or innovation . . . BUT, at the same time we secretly fear and distrust the effects of such innovations upon our own special area of filmmaking.

Videotape has changed my life several times. It has altered my perspectives . . . affected my creative freedoms . . . and even helped to determine where I live. Furthermore, it has done all these things, not in any one or two indirect and isolated manners, but in direct, specific, important, and powerful ways. Because of its influence and its technological effects upon writing techniques, I have several times been forced by videotape to make a choice between the two horns of a dilemma, both of them undesirable.

It's no particular surprise that new developments sometimes seem to be threats rather than opportunities. After all, we have to adjust ourselves to some kind of predictable routine in order to survive, and if we're constantly having to reprogram our mechanisms of adjustment, the results can be very insecure and upsetting.

I cherish with some nostalgia those days of live TV drama when corpses would sometimes get up and walk offstage, brushing their backsides free of dust. Or great actors of stage, screen, and radio would forget their lines and fail to take up their speeches on cue. They just stood there, sort of squinting at the idiot boards which they could not see because of their refusal to wear glasses on camera. And in live TV commercials, who can forget the cigarette spots where the MC took a long, enjoyable drag of his favorite cigarette, and promptly went into a coughing fit before he could deliver his lines of ecstatic enjoyment of the smoothness and mildness and pleasure.

Everyone has his own favorites, of course, but my own personal fa-

vorite live TV commercial was done for a famous, nationally advertised beer. One of the great personality announcers of the fifties poured himself a tall, bubbling froth of the pilsner, took a small sip, and then went into his pitch about its fresh, invigorating flavor, the delicious natural carbonation, and all the rest. A few seconds after he finished, the camera cut back to him in error, and there he was, pouring the rest of the glass into a slop bucket, which was bad enough in itself. What really made this particular spot my favorite boo-boo of live television was the expression on his face. It was pure disgust, an exquisitely pained grimace of total abject rejection, the same expression you sometimes see on a hospital orderly performing the duties he sometimes has to perform. And the way the announcer held the exquisite crystal glass by the ends of his two fingers reminded me of the way I held an opossum by the tail the first time I ran over one and had to remove it to the side of the road.

Those were some of the obvious problems which were solved, first by films and then by videotape. But of course there were far more important creative problems which videotape helped to solve in the days of "live" TV drama.

Videotape in drama first began to affect the writer's structure of his script at the time of the "Playhouse 90" series. That was the first dramatic series on TV which, for example, permitted flashbacks. During the days of live TV, if you wanted to show a flashback, or a scene of the major character at a different time, place, or period of his life, you had to figure out some kind of a transitional scene to cover the passage of time. And, during this transitional scene (which was usually extended by the commercial), the actor could change costumes, be made up to look different, and pick up the new props he needed for his entrance. Since these

transitional scenes were obligatory, but usually had no other dramatic rationale, it was extremely difficult to structure them into the drama so as to maintain the forward dramatic thrust of the action. In fact, one of the underlying causes for the leisurely pacing of these early live TV dramas was the inclusion of the scenes required for prop, make-up, scene, and costume changes.

But with the advent of videotape, the writer was freed from the strictures of the classical Greek unities of time, place, and plot. You could have a scene of a man in the prime of life followed immediately by a dream sequence of him ten years previously, or thirty years from now, or brawling with an adversary. That was a liberating force directly affecting the writer's creative freedom. It goes without saying, however, that it did not automatically and immediately result in better writing, or more original plays, or anything of that kind. But it did allow the writer greater latitude and mobility of time and space.

Perhaps the most important thing that was ever said to me about the advent of videotape was a comment of Walter Lowendahl's, which I'm sure he doesn't remember, but which established a new attitude on my part — an attitude which has served me well through the changing times of tape, super-8, cassette, cartridge, EVR, and what have you. Regular readers of this column are aware that I make a practice of never mentioning anyone by

name who is still active in the industry, as Walter is. I keep these columns anonymous, not because I'm afraid of lawsuits, but because I have tried to relate to broad generic principles, to industry-wide trends, and to large-scale problems, rather than to individual personalities. But, as I said in my very first column, I plan to break my own rules whenever a broader purpose can be served, as in this case.

Walter Lowendahl was Executive Vice President of Transfilm at the time, and videotape had just begun to establish itself as a coming thing. In a fit of depression one day, I asked him whether he thought this would mean the end of the film industry, and should I start planning for some other career, and how would this affect the writer when you could just rewind a tape and play the scene a different way, and what about the possibility of films that write themselves, and all the rest of the nonsense people were spouting?

Walter thought for a long quiet pause and then he said: "It's just another way of capturing an image . . . Good ideas will never be outmoded by machinery."

Learn to use it

In retrospect, that seems so obvious. But it did change my life. I decided not to be scared by videotape, but to learn to use it. And, obviously, as the years went by, it established itself as a vital element in TV, as a desirable element in closed-circuit sales conventions and shows, and in a lot of other ways. And . . . we learned to use the videotape wisely and well. But . . . it certainly did *not* make film obsolete, and . . . it made writers more important than ever before. (That is what is known as a personal professional plug).

Similar things are happening today. If you get an EVR assignment, you will find that you must first shoot the show on 16mm film, because in the present state-of-the-art, 16mm is the most workable form to begin with if you want to end with an EVR cartridge. Needless to say, a year from now that may not be the case, but that's the name of the game . . . technological change.

Personally, I like technological

change. I like to learn all there is to know about it so I can sound hip and also so I can adapt my writing in order to survive. I know that for example, writing a lot of wide screen meetings with all their special advantages and limitations helped me to do a better job of writing conventional films.

And, quite frankly, I get terribly bored with the simple repetition of previously established techniques I have already mastered. I can understand why performers hate to repeat their hits on the Ed Sullivan show, which they do. I once talked with Benny Goodman about this. (Two big names in one little paragraph, let's just watch it!) He said the reason is that if you want to improve, you have to keep trying new ways of playing, that a real performer wants to practice the things he has trouble with, not the ones he's already mastered, or that come easily to him.

I like that idea . . . I like the basic idea of challenge. I think that if you want to be in this business and enjoy it, you *have* to like the idea of challenge. The kinds of people who give this industry vibrancy and originality are not afraid of new technologies, but tend to regard them warmly without falling into the trap of believing they will solve all their problems overnight, just by buying some new lens or camera or gadget or product or technology.

On the other hand I fear and tremble when I meet a client who leaps into every new technical process fifteen minutes after reading the first press release. That's bound to spell tragedy every time. The brand new technique can cover up a lot of basically bad ideas . . . but it can never substitute for really good ones. And films, my friends, come out of good ideas . . . whatever the techniques that may come along.

PARADOX is a regular column written from the writer's viewpoint each month. It is written by Stanford Sobel, a New York-based freelance writer, whose scripts have been produced in all the technologies mentioned in the column.

transistorized hand unit for complete control of zoom motor

NEW! smooth ZOOM MOTORS for ANGENIEUX 12-120 and ZEISS 10-100 Vario Sonnar

The popularity of zoom lenses is due to their versatility and potential for more imaginative camera work. Both features are considerably enhanced by the addition of a zoom motor.

We are pleased to offer two specially designed Electro Zoom Motors for the Arriflex 16SB and 16MB cameras. One each for use with the Zeiss 10-100 Vario Sonnar and the 12-120 Angenieux zoom lenses. They are mounted without tools or lens modification. Split clamp mounts do the trick in moments.

Each zoom motor comes with a fully transistorized hand unit that controls all functions — stop, start, direction and speed. Infinitely variable and smooth from 5 to 50 seconds across a 10X zoom. Operation from regular Arriflex 8 volt battery or from any DC source of 5 to 16 volts.

The precision, reliability and dependability you have come to expect of Arriflex equipment are built into these two Electro Zoom Motors. They're available now at all authorized Arriflex dealers. See them!

Festivals Are not the Same

Editor's Note: The following comment was written by J. W. Anderson, chairman of the U.S. Industrial Film Festival in response to Stanford Sobel's "Paradox" column dealing with film festivals in our January issue.

J. W. Anderson has extensive experience in industrial film production, both as a sponsor and producer. He has served as judge and advisor for numerous film festivals, having

just completed the chairmanship of the second annual Public Relations Society of America Film Festival. He is the creator and director of the U.S. Industrial Film Festival, now approaching its 4th annual competition.

An article in the January issue of *BUSINESS SCREEN* sought to take to task certain aspects of film festival management. In many ways it reminded us as typical of the cynics who proclaimed, after the 1968 Democratic National Convention in Chicago, that all Chicago cops are irresponsible bullies. Others draw equally broad conclusions when they say that all black people are lazy and shiftless. It's a "paradox" to note, however, that there are over 300 black millionaires in the United States and that recently a couple of Chicago cops were cited for brav-

ery. This clearly illustrates that all Chicago cops are not the same just as all black people are not the same. Citing these men for bravery was an example of the recognition and honor that humans have sought from their fellow man and coveted for centuries. Such recognition may be simply a pat on the back for a job well done or it may be a Nobel Prize, a Pulitzer Prize, an Oscar or even a Purple Heart. To the recipient, it is a mark of success, a job well done, a symbol of achievement.

It should be clearly noted that film festivals are not all the same either, and we are fortunate to have some very good ones in the U.S. Festivals provide an important function by creating an opportunity for the producer or sponsor to improve the quality of his standards of production excellence through competitive comparison. Festivals provide an ideal basis for advertising and publicity campaigns for the recipient and they work! This was pointed out in one of the more positive areas of the article when the writer stated that "... the only ad which ever paid off in direct inquiries and sales was one in which I listed all the films I had written that year along with all the awards at national and international film festivals won by those films." I know personally of film contracts that have been let because the producer's work was first brought to the attention of the sponsor through festival recognition. At the U.S. Industrial Film Festival, we frequently receive letters and calls from potential sponsors requesting recommendation of a producer for a forthcoming film. Our reply is to furnish a copy of the current list of winners. Potential sponsors seek to evaluate a producer's credentials and festival awards form an important cornerstone of these credentials.

Festival judges came in for some criticism in the article but isn't it interesting to note how truly good films such as *Why Man Creates* which the author mentioned, consistently win high honors in festival

after festival? Judges must be capable and attentive in order for them to frequently select the same film as tops from the many hundreds entered in numerous unrelated events. They do not make the selections merely on a film's track record either. As an example, even *Why Man Creates* was relegated to a secondary position behind the Netherlands-produced *Vision of a Reality* in the 1969 U.S. Industrial Film Festival. Really fine films do stand out and invariably are highly honored by these independent judging groups as evidenced by the records attained by such modern day classics as *Subject: Packaging, Micro, Imagination 10, Monument to a Dream, A Fable*, etc.

In judging a film, there are many factors that contribute to its recognition, but each element of creativity is but a part of the most important factor — effectiveness. Therefore judging forms should be structured to stress this point. A good judging form is the result of years of experience and along with carefully prepared instructions, will properly guide the judges. Our judging form is reviewed yearly by our board of advisors to be certain it is as perfect as we can make it. A committee reviewing the selections of a sub-committee is another commendable check employed in evaluating films. But remember, judges are not too unlike an audience. If a film does not attract their immediate attention and hold it, in all probability it will fail to hold the attention of the audience, too.

Festivals have made a substantial contribution to the film industry by allowing cross pollination of ideas and fertilization of creative thinking. Exchanges of ideas are a necessary and desirable stimulus. Do not shut yourself off from such an exchange. This is the very reason you read *BUSINESS SCREEN*. Get involved in festivals for they can bring successful rewards through recognition. Success breeds success and festival recognition can build profitable businesses.

The Cassettes Are Coming

During the next 18 months, cassettes will be coming . . . fast. Here's how Business Screen found potential industrial users to be awaiting them.

The cassettes are coming! Videocassettes, that is. Ever since the first news "leak" about the CBS/EVR system, the industry has been deluged with announcements of new systems. The term videocassette is not really accurate to cover many of the systems being developed and discussed, but for lack of a better term, we will use it. Small, lightweight and economical, they appear to promise the ultimate A-V magic . . . individual usage through any ordinary TV receiver.

There are no less than 20 different announced systems presently at various stages of development. Only one (EVR) has reached the market as of this writing. They range in system type from film variations (EVR) to vinyl tape (Selectavision) to magnetic tape (Ampex, Sony, Panasonic and many others) to the newest entry by Telefunken which is a plastic foil disc similar to an ordinary phonograph record. The technique for recording and duplicating programs on the systems also differs.

In terms of sheer numbers, the majority of the announced systems are videotape, differing mainly in the size, shape and volume of the cartridge, although there are some differences in the tape itself in some systems. How many of the systems ultimately reach the market remains to be seen, and undoubtedly many of them will be marketed in a slightly altered format and design.

While most of the publicity surrounding the various systems has been about the consumer market with predictions ranging from \$1 billion to \$12 billion by 1980, little serious attention has been paid the industrial market where the systems will most certainly be used first. It is no real secret that it is here in industrial usage that new audiovisual products are really tested. It

is here where the ultimate success or failure of a product is often determined. And, in light of the fact that videocassettes are really the outgrowth of the ever smaller (physical tape size) format videotape market, it is a natural.

In order to get a real feel for the industrial user's thinking in terms of videocassettes, BUSINESS SCREEN surveyed several hundred of its readers who are in charge of leading industrial or government VTR installations.

The results of the study were diverse and enlightening, particularly in terms of prevailing attitudes about the concept of videocassettes themselves.

We asked respondents whether they were presently using EVR or had any cassette system ordered in quantity. We also asked if cassettes were or would be under consideration for future use by them. And, we asked them to describe their current feelings about them and how much of an effect playback vs. recording/origination system capability had on their consideration.

Surprisingly, we found only three cases of companies making a sizable commitment to any cassette format (EVR in each case). The predominant attitude was "wait and see" for a variety of reasons. We found that several companies have already ordered one each of two or three systems in order to make their own comparisons based on their particular needs.

The big questions

The hesitancy on the part of industrial users to commit themselves to any of the videocassette systems hinges upon two basic factors, *cost* and *standardization* (or lack of it). At the time of our survey, there was no standard. Now, however, one appears to be emerging at least for the tape cartridges themselves (see chart

footnote). And, industrial users already in the midst of the Super 8 cartridge standardization hassle are not at all anxious to rush into another. Thus, the hesitancy or "wait and see" attitude expressed by many. The cost factor runs deeper in the minds of industrial users than just the consideration of the cost of the unit. Most of those queried feel certain that ultimate mass production and sale of videocassettes will bring the cost of the unit itself well within reasonable ranges. The big question mark was in the cost and time factors of duplication and cartridge loading. Some feel quantity limitations and time needed for mass duplication are serious drawbacks to many of the proposed systems.

Despite manufacturers approach to the contrary, business users do want solid standardization, which offers system compatibility or interchangeability of cartridges.

While none of our correspondents felt they needed a recording capability with each unit, 85% said recording/origination capability was vital in their ultimate selection. Future is bright.

Despite the expressed hesitancy and questions raised, nearly every person surveyed agreed that the cassette concept is great, adding that they are at least interested in learning and seeing more about them.

AT&T's Willis H. Pratt, Jr., best summed up the feelings of those we surveyed when he commented, "Videocassette systems have a great potential. The speed of their development (and utilization) will depend on the manufacturers' ability to standardize and reduce costs to a point where large numbers of devices can be made available and programs will be interchangeable. Until this is done, industry will go slow to avoid investing in hardware that may be soon outmoded."

**you change the
NPR's magazine
in five seconds
and you don't
touch the film.**

eclair

Snap off the old magazine, check the aperture, snap on the new magazine. That's all. No threading; no loop to form; no blimp to climb in and out of. You don't need to touch the film at all. The film is threaded and the loop is formed inside the magazine when you load it, before shooting starts. The rear pressure-plate is on the magazine, the aperture is on the camera body. When you snap off the magazine, there's the aperture, right before your eyes. Couldn't be easier to clean.

With unscripted action that won't wait, you can leave the tape recorder running when you run out of film, and cover the lost five seconds with a cutaway later. The NPR's built-in clapper and sync-pulse will automatically re-establish sync. In the studio with a script, the five-second magazine change can prevent everyone on set going off to make a phone call when they hear the dread cry: "Reloading." With the NPR, it's just another take. Immediately.

The NPR's rotating two-lens turret, precise reflex viewing, light weight, registration-pin movement, balanced shoulder-resting and, of course, its blimp-free silence — they all make life easier, too. May we send you a free copy of our NPR brochure?

Eclair is at 7262 Melrose Avenue, Los Angeles 90046.

4 While there is yet no universal standard in the equipment, last month, Sony Corporation, Matsushita (Panasonic) and Victor Co. of Japan announced agreement on specifications for a color videocassette standard utilizing a tape width of 3/4 in.; a two reel flat plane cassette, 60 minute playing time; and cassette dimensions of 8.70" wide, 5.51" deep, 1.26" high.

5. Within this chart, the word cartridge is synonymous with deep, 1.26" high

By **HOWARD J. ZUCKERMAN**
President,
National Teleproductions Corp.

Ever since the day when the boys in Tom Edison's lab filmed the antics of "Fred Ott's Sneeze," this world as been entertained, informed, convinced, and even educated by an ever-widening scope of moving visuals. Once the exclusive domain of film, this medium has now come of age as electronic photography through the rapid advancement of television. We believe that videotape is on the threshold of replacing chemical photography in many of its basic applications on a widespread scale. It's beginning now and will become obvious within the next three to five years.

The potential of videotape cassettes is as large as the present visual communications field itself. Virtually everything that is being done and reported in magazines can be done right now through the use of videotape. Add to this the fact that tape is quicker to process than film (it's instantaneous) and generally less expensive (as much as 25%) and the advantage lies with tape from the beginning.

Miniaturization will produce compact, portable, lightweight units that will be a boon to sales people in the field. Take a look at some of the miniature TV sets on the market today. These units can, through the use of cassettes, quickly adapt to a variety of demonstrative programs that are not affected by the amount of light in the client's office. Consider a multi-media sales meeting presentation produced on videotape. The advancement in computerized editing and cueing techniques can turn a highly complex mixed-media sensation into a simple one-push-of-the-button affair. Yes, even slides can be programmed as still frames, thus eliminating forever the risk of jamming and other gremlins that haunt projectionists. Quick to produce . . . no waiting for lab processing . . . no waiting to see workprints . . . computerized editing and cueing . . . cheaper in final form . . . cheaper in quantity duplication . . . that's what videotape cassettes can mean right now in the visual communications end of business and industry. But tomorrow it means broadened

Videotape Cassettes: the end of the beginning

Here's how a commercial videotape producer envisions the ultimate effect of the touted cassettes. He sees it as still another important "communications explosion."

vistas of communications with even bigger audiences.

The success and refinement of film was encouraged by the demands of millions of movie theatre ticket-buyers. The same will happen with videotape cassettes, but these units will be in homes. In fact, videotape cassettes may just be a giant shot in the arm for an ailing movie industry, helping to recapture many of the more than 65 million weekly admissions lost since 1946. And, as this happens, a ready-made audience will be developing for business public relations "free" films or videotapes. Consider the latitude of sell available to your organization when you supplement your annual report or capital financing campaign to selected persons with a videotape cassette documentary to support your print material. Corporations could file cassettes with every major brokerage house in the country to introduce the corporation to the broker and prospective investors. Recruiting could be made easier by a cassette which the prospective recruit could take home, plug into the TV

cassette player and find out about you. Sales personnel could take their refresher or new model training tapes home for viewing at their leisure.

Why can't this be accomplished on film? Do you have a 16mm projector in your home? Most of us don't but soon we *will* have a cassette playback unit that works through our own television sets. In fact, today an enterprising management man may recognize the fact that new electronic equipment is most often purchased by the more affluent and influential — the most difficult market to reach for any purpose. A direct mail program utilizing videotape cassettes for playback on the prospect's new machine would be a new and valuable sales tool.

Videotape cassette systems are a reality today. And, of course, production facilities for all phases of business and industry videotape are already well established and experienced. Investigate videotape cassettes. You'll find out for yourself we're on the edge of yet another great explosion in communications.

Meet the Author

Howard Zuckerman, in addition to being president of National Teleproductions, is program manager for WTTV-TV in Indianapolis and serves as a free-lance producer/director for TV Sports, Inc., a major packager of televised sporting events. With more than 15 years experience in all phases of TV production, Zuckerman is considered an outspoken missionary of videotape in all of its diverse forms.

EVR Moves from Promise to Reality

EVR is here and available now. CBS believes it will emerge and remain as the "dominant if not only (cassette) system of choice."

By ROBERT E. BROCKWAY
President, CBS-EVR Division

In its February, 1969 issue *BUSINESS SCREEN* covered the first public demonstration of monochrome EVR at the New York Hilton. The article, titled, "EVR—Promise of the Future?", described the CBS Laboratory prototype model seen in action in December, 1968 for the first time. *BUSINESS SCREEN* approved—but wound up its summary on EVR with this observation:

"There are still many questions to be answered by the potential EVR user, when it becomes available sometime in 1970."

The article then asked four questions which I should like to answer now, based on what has taken place in these intervening months.

Question #1: EVR quality is very good, but is it better than VTR quality?

Comparing all the demonstrated as well as announced target standards in this new video field, only one system can deliver 625 lines of horizontal resolution, EVR. Only EVR, printed on actual film, protected from handling and wear in its hard round container, has chalked up actual performance records of 1,500 repeat plays with no appreciable wear. Is EVR quality as good as VTR? Its image quality surpasses all VTR's here seen to date except perhaps TV studio equipment in the \$75-\$100,000 price range, operated by professionals.

Question #2: Which will be the most convenient?

We are confident that EVR will prove to be the most convenient system for millions who will embrace pre-recorded video for cultural pursuits, for training and education, for instructions in everything from golf to how to install and oper-

ate modern appliances, and for entertainment and enrichment of every kind, displayed on their television sets at times they choose.

Convenience begins with ease of acquiring cartridges, either by rental or purchase. Convenience requires ease of operation. EVR will be available wherever people shop; also in public and private libraries, in theatre lobbies, record shops, through cartridge clubs and probably super markets.

Ease of installation? EVR hooks up to the antenna terminals of any television set. You can use a dime as your screwdriver.

Question #3: Which will be ultimately cheaper?

Our firm conviction, based on electronic realities, is that EVR players, when they are built into television sets, will leave all other hardware well behind in cost.

On software prices, there are several answers. EVR becomes economically viable, both for the CBS Electronic Video Recording Division to process and for customers, at fifty duplications. At that number and higher, combined economy and quality will favor EVR by a wide margin. EVR being highly price-volume sensitive, the more cartridges needed, the lower the per cartridge cost.

People who require only one copy, or a few, will find greater economy in a VTR. In the same way, those who need to record their own product for immediate playback will turn to VTR. EVR is interested exclusively in high quality prerecorded video applications.

Question #4: Present videotape recording equipment is improving steadily and will undoubtedly be better in 1970 (when EVR is commercially available) than it is today. How will the two compare then?

Like VTR, EVR has also been

in continuous development over the last year and a half. By gaining a full year on the original timetable for introduction of color EVR, EVR chalked up developmental progress more dramatic by far than any technological advances revealed in VTR. Continuous research and development will keep EVR the quality leader and make it increasingly, not decreasingly, the economy leader.

After posing these four questions, *BUSINESS SCREEN* summed up with the observation,

"As of this writing (February, 1969), EVR appears to have several inherent advantages, but its ultimate success or failure rests in the hands of the potential users of the system, whether their use be for business, government, education or home. They are the ones who will have to decide if EVR will do the job they want it to better and/or cheaper than whatever else is available."

A progress report on this subject is very much in order. When *BUSINESS SCREEN* went to press with its February, 1969 issue, we had announced only a single EVR customer. *BUSINESS SCREEN* well wondered what additional reception EVR would have in the marketplace.

The following month The Equitable Life Assurance Society of the United States announced that its training and communications programs would go on EVR cartridges, and that 1,200 teleplayers had been ordered from Motorola.

Across the country, a wide variety of commitments to EVR began coming in, signed contracts covering many educational and industrial training applications. Notable among them has been an ambitious new educational program created by Field Enterprises Educational Corporation, eventually intended to instruct and enrich all ages from pre-schoolers to the aged. The University of California, Los Angeles decided to convert courses in small business administration to EVR.

While all this has been happening, the EVR Partnership (50% CBS, 30% Imperial Chemical Industries Ltd., 20% CIBA Ltd.), based in London, announced and progressed hardware and software agreements affecting The United

Kingdom, France, Italy, Germany, Austria, Switzerland and the Scandinavian Countries. More recently, color EVR was demonstrated in Tokyo to major electronics firms there.

Meantime, Motorola revealed its own entry into distribution of software. A comprehensive plan has been announced for training the continent's paper merchant sales force of 17,000 with EVR players in their homes. The prestigious BNA Films Division of The Bureau of National Affairs decided to convert its 16mm management training series, *The Effective Executive*, to EVR cartridge format. National CATV Program Library, Inc. of

Dallas revealed a broad program for supplying Community Antenna cable systems with programming menus — on EVR cartridges.

There are many more of which I will mention just one because of its strategic importance in this field.

The company is 20th Century-Fox Films. Its spokesman was movie pioneer Darryl F. Zanuck, 20th Century's chairman of the board and chief executive officer. He announced that some 1,500 feature films would be duplicated on EVR cartridges to begin a major new motion picture industry. This move, towards rental of feature films for viewing in the home, was later endorsed by Fox's board of directors.

Zanuck, cited EVR's unique complete protection of valuable film rights and properties from piracy as a major reason for his decision.

At this writing, no other system demonstrated or announced has compiled more than the smallest fraction of the quantity of corporate and educational community investment committed to EVR. Feature films committed to systems other than EVR are dwarfed by the size of the Zanuck endorsement alone. We confidently predict that for education and business uses in the field of pre-recorded video, EVR will remain the dominant if not only system of choice.

By SAMUEL C. GALE Director of Marketing Videorecord Corp. of America

The videorecord, no matter what form it takes, will be one of your most important communications tools during the next decade and beyond. It has the power to make a passive TV set into an interactive learning system through the use of visually stimulating on-line programming and responsive off-line programming and material.

But, what about programming?

There are seven areas of opportunity when considering the use of videorecords:

1. Custom community educational programming,
2. electronic merchandising,
3. free film distribution,
4. training,
5. internal communications,
6. electronic publishing, and
7. entertainment.

Custom Community Educational Programming falls into the category of formal education. Only the videorecord of the future will provide this type of programming in an interactive and self-pacing (relaxing) way. Gone will be the days of darkened

What About Software?

Videorecord Corporation is one of the first and most comprehensive firms preparing to meet the software needs of the cassette market.

rooms, bulky projection equipment and central film repositories.

A student will be able to select his own subjects of interest and either play the information "on site" or take it home in the format that meets his at-home videorecord standard.

For example, Videorecord Corporation will not only make its medical education programming available (initially in the CBS EVR format) for hospital consumption via VCA's national Videorecord distribution system, but will also offer the continuing education portion of its production to doctors, either in their home or office via VCA's Videorecord Club of America.

Electronic Merchandising will be another natural result of the introduction of the videorecord. The problem with broadcast television as we now know it is that it reaches

too many people! With the advent of videorecords, it will be possible for profit-oriented business to penetrate selective target audiences at a cost estimated to be twice that of existing broadcast cost-per-thousand rates. Think about that for a moment: *Qualified*, demographically controlled buyers at approximately twice the cost of existing "shotgun" figures.

In electronic merchandising, the videorecord can be a point-of-purchase traffic builder . . . a decision maker . . . a customer retainer. It is result oriented; and it should be produced with that basic thought in mind.

Free Film Distribution via the videorecord can help business reach audiences not now covered by existing 16mm film distribution systems.

It has been estimated that there are more than 1500 sponsored film producers in the United States. I can foresee a time in the not too distant future when the sponsored film will be produced with the following thought in mind: Will the *individual* want to select this message for his own benefit?

The days of audience figures for the sake of audience figures will diminish. The messages will become more specific . . . more edu-

Meet the Author

Samuel C. Gale is director of marketing for Videorecord Corporation of America, Westport, Conn. Videorecord is engaged in the production and distribution of programming for the emerging cartridge television industry with particular emphasis on the fields of education, entertainment, and health sciences. Active in audiovisual activities since 1960, Gale was previously vice president of sales for Capital Film Laboratories and head of his own company, Corser Enterprises.

SOFTWARE continued
rationally oriented . . . and (once
again) more result oriented.

Training and Internal Corporate or Institutional Communication in education and industry will begin to utilize the videorecord because of its qualities already mentioned. Not mentioned so far, however, is the fact that once the videorecord player is installed in a training situation, it can also be programmed to time share other messages such as electronic merchandising or entertainment.

For example, we are already working with a major insurance company where we will not only be supplying them with videorecord

hardware on a lease basis (thereby taking the justifiably difficult hardware decision off their shoulders), but supplying them with our own Videorecord Club software that will be used by their agents when they are not viewing company-sponsored training and internal communication messages.

Electronic Publishing is an area of great concern at many publishing firms now. The question is: How soon should they enter the field, and in what areas of end-user interest?

It's our belief that many of the home study and continuing adult education courses now available can be programmed to fit the video-

record format. The learner-viewer can start and stop the program at will. This feature, combined with fast forward and reverse operation, opens the possibility for interactive self-paced instruction. The learner can be programmed to respond on and off-line workbook, programmed text, three-dimensional manipulative or real-time activity. All this without expensive computer-assisted devices!

Entertainment. I saved it for the last. For it will be the last to surface in videorecord terms. We can't really envisage existing "total entertainment" programming making it big via the videorecord during the early years. In the first place, the ma-

Cassettes and Beyond-se

NITA president says industry will play a vital role in whatever happens with cassettes, but suggests going slowly for now.

By THOMAS F. HATCHER
Manager, Learning Systems
Equitable Life Assurance Society

Recently I attended a seminar on Video Cartridge, Video Cassette, and Video Disc Turmoil. In a few weeks the First International Cartridge TV, Videocassette, and Video Disc Conference will be held . . . and yet in both cases everyone is talking about the same thing . . . a record of some event which, when placed in a device, can be played back through a standard television receiver. So why don't we have early agreement that what we are talking about is a "videorecord" regardless of what form it takes? Look at all the space we'll save!

Why does business and industry have an interest in videorecords? Let's see if we can't develop rationale. Books like *Age of Discontinuity* by Peter Drucker and *Future Shock* by Alvin Toffler make us acutely

aware that change is occurring at an ever increasing rate. Probably due to this and the computer, we have more information and knowledge than ever before developing at an ever increasing rate. Furthermore, the pace of change forces on us as individuals a need to know at an ever increasing rate.

No longer can we afford to deal with these situations in the traditional manner of moving people to the information, such as classroom instruction, large conferences, meetings, etc.

We must find an effective way of moving visual information, supported with audio, to the individual, where he wants it, when he needs it.

In many cases in business and industry this means from a headquarters location to many detached offices, or from a central location to individuals working in the field

This covers a range of people such as salesmen, managers, engineers, maintenance men, service personnel, dealers, distributors, plant operators, and many others.

What is it these people need to know? Generally, I think it can all be covered in six areas. I consider a company is maximizing the potential of video when it is effectively producing programs in all six areas.

Administrative communications is any communication of an administrative nature which members of an organization need to know; *Skill training* is the most pressing need in most any organization and it never seems to go away; *Product introduction* is an ongoing need for nearly all companies; *Ideation* is the presentation of ideas, concepts and thoughts as a means of fulfilling the mind's capacity to entertain ideas; *Reality* is the most important area because it is here that we take advantage of the unique characteristics of video and videorecords for programming human behavior; *Edutainment* is a method of presenting educational material in an entertaining way. *Sesame Street* is the best current example.

Put together all six add up to ASPIRE — a simple way of remembering them.

Well now, if these are things that people in business and industry need to know, how do we get it

Thomas F. Hatcher is manager of learning systems for The Equitable Life Assurance Society of the U.S., and current president of the National Industrial Television Association. At Equitable, he is responsible for the development and installation of new communications and learning programs using electronic support systems. A graduate of New York University, he is also a member of the American Society for Training and Development, AECT, NVCA, NAEB

major networks are not going to sit on their hands and let the videorecord take over the image orthicon tube! But . . . in the second place, it will be uneconomical for them to manufacture certain types of entertainment fare.

We see videorecord entertainment programming taking the form of:

1. How-to series,
2. classics (plays), and
3. real life drama.

In the long run, the market place will determine the type of entertainment programming brought to the individual. We can assure you that there will be programming introduced that has not been possible to introduce via the broadcast tele-

vision medium. Man's imagination, or the lack of it, will determine the ultimate evolution of this type of programming.

When the history of videorecords is written . . . when all is said and done . . . it will probably say that we embraced all videorecord systems, that a "standard" was never achieved. There was room for playback and playback & record.

It will say that for the first time in history, selective film or tape messages were distributed at a cost everyone could afford.

It will say that the videorecord became a new, vital communications tool in world society.

It will say that people developed

a new philosophy of programming and its use. A liberating manifesto: Declaration. Intent. Servitude to a cause . . . like young eyes, committed to their own inner feeling.

It will say that we were loving . . . personified in our own ability to love ourselves while fostering an adequate educational body in our world politic.

We moved into a time that changed the scope of human mental interaction.

We maintained this new direction . . . this new philosophy . . . unencumbered by the restrictions of the past.

And after all, isn't that all we could expect? or give?

User Leaders Speak Out

By LEE COYLE

President, Industrial Audio-Visual Association

Personally, I find little excitement, from a professional standpoint, in watching a half dozen or more fine companies play "King of the Hill" to see which of their totally incompatible video cartridge systems will survive.

The home market is undoubtedly the great prize for these imaginatively conceived devices, and that is as it should be. Half-inch cartridge systems cannot, and possibly will never fulfill the qualitative needs of the professional industrial AV fraternity. At best these systems are analogous to super 8 as it compares with 16mm: a useful tool of severely limited application.

As the seventies advance, American industry will fully realize the potential of television for communication and training. Color will be commonplace, and the advent of a sturdy video cartridge playback-record unit of high quality and performance will undoubtedly come to be, but I strongly doubt whether any of the present multiplicity of formats will be acceptable to the vast industrial market that is swiftly evolving.

Some manufacturer is, I suspect, about to steal a long lead in this market by offering the industrial user a video cartridge device with substantially greater capabilities than those now projected.

IAVA president sees cassettes as step toward even more sophisticated systems . . . adding that greater reliability is a must.

The future of audio-visual communications in industry will necessitate the development of a dependable, sophisticated cartridge device using one-inch magnetic tape. I foresee limited application of devices employing film which is neither versatile nor economic.

The professional gains very little from the advent of the half-inch cartridge recorder compared to the benefits possible from a one-inch self-threading device. Since simplicity of operation is the major feature of such devices, I suspect that a one-inch cartridge system designed specifically for the professional market: CATV, industry, and the broadcaster, will virtually exclude half-inch cartridge units from the professional field.

I opt for a one-inch cartridge format and negate film and half-inch tape devices as of limited usefulness to industry in the future. Nothing

but rugged and adaptable equipment will win a place for itself in the typical industrial CCTV system of the late seventies.

Industry by then will have made a major commitment to TV as a prime communications tool for training and employee information. Color will be standard. Unlike most industrial CCTV installations today, tomorrow's companies will not put all their marbles in a central production studio. Throughout an industry one-inch cartridge color recorders will serve training staffs in field locations. Coupled to a camera, these cartridge records will provide field people with instant playback training sessions, role-playing studies, or in the production of modest programs of limited application or usefulness. All of the tapes produced on these one-inch cartridge recorders will have sync

Meet the Author

Dr. Lee Coyle is audiovisual and CCTV manager for Ohio Bell Telephone Co., and current president of the Industrial Audio-Visual Association. A widely published author in literature and the humanities, Dr. Coyle has also written, directed and produced a number of motion pictures and slidefilms for Ohio Bell. At the present time he is supervising the design and construction of one of the first major color CCTV installations in the country.

HATCHER continued

to them — videorecords, of course!

Generally, as far as business and industry is concerned, videorecords are primarily and simply distribution systems — a way of disseminating a videorecord which has been originated by some other system — pre-recorded videorecords if you will — either by the company itself or by some organization contracted to do it for the company.

I don't see much prospect for general programming for the business and industry market. Under ASPIRE, most companies feel their needs are unique and, therefore, must be satisfied by them or specifically for them. If this remains true, then it would seem to follow that the major application of a videorecord system in business and industry will be as a company-wide distribution system of programs produced by or for the company.

A note to general program producers: Don't despair — remember that the users of these company systems are also consumers and, since the consumer market will most likely be developed through the institutional market, it may be wise for you to develop a shrewd marketing strategy that will allow you to identify these users and gain access to them. What better way to obtain consumer market demographics on

a test basis, so you can have relevant and saleable programming available when the consumer market finally does break open.

Frequently people ask me why I chose EVR for our company. Because we needed a national distribution system of video programs in 1968, which was when we saw a demonstration of EVR, evaluated it and determined it would suit our needs. Nothing has developed since that time to change our needs or our decision.

As to the future of videorecords, I would expect to see three basic systems:

1. A device which plays back encapsulated film converting optical images into video for viewing through a standard TV receiver. Examples are EVR and announced Super 8 systems. These systems require processing between the original source and the end product and thus are more economical when used for distributing large numbers of copies of material which will remain unchanged for an extended period of time.

2. A device which plays back encapsulated magnetic tape for viewing through a standard TV receiver. While only prototypes exist today, examples demonstrated in the United States are the Sony, Ampex, Panasonic and Avco systems. All of these systems purport to record

as well as play back. However, quantity distribution of these tapes will require duplication of source material. Unless a method of high speed, low cost quantity duplication can be developed, fulfillment of these systems will be costly and tedious. At the time of this writing, there has not been any demonstration of a production model high speed duplicator in the United States. These tape systems, if duplicable, will satisfy small quantity copy needs very nicely.

3. A device which plays an eight or twelve inch disc of wafer-thin material at extremely high speeds thus producing a video picture through a standard TV receiver. This system requires processing of source material into the disc format. It would appear to be most economical where very high quantities of five or twelve minute segments of material are required. Here again only prototypes such as Teldec have been demonstrated in the United States.

If all this seems confusing to business and industry people, there is no need to be dismayed — just keep exploring, testing and evaluating ideas and products, for one thing is certain — by the end of this decade videorecords will be as common as audio records — and business and industry will have played a major role in making it happen.

COYLE continued

pulses compatible with studio-produced masters, giving them the capability of being efficiently edited into those masters and then duplicated without loss of quality.

Television equipment cannot be the sole preserve of AV specialists at Headquarters if it is to reach its optimum potential as a communications tool as commonplace as the telephone.

Now if this communications potential is to be realized in the future, the cartridge recorder must meet high performance specifications. At the present time, the half-inch format just can't stand tall enough. It does not have the time base stability necessary to dub up to one-inch for editing into studio-produced tapes; in addition, the economy promised by the half-inch

format is largely fictional. Tape savings would be minimal and maintenance would probably be higher unless special heavy-duty versions of the basic device were designed. In addition, susceptibility to theft would be excessive for the half-inch cartridge recorder considering its attractiveness for home use.

All in all, the half-inch format is less than desirable for industrial use in a fully integrated television system. In a playback-only situation, however, the format may be acceptable, its susceptibility to theft and its lower quality notwithstanding.

In any event, the emergence of a cartridge loading video recorder signals the beginning of a new phase for CCTV: recorder-playback units promising lower cost, easier portability, and greater sim-

plicity of operation. The last quality is of paramount importance to the growth of CCTV as a communications and training tool, for the strongest resistance to the use of a VTR comes from the non-professional user: it takes a kind of heroism for him to thread the monster and to face the crises of tracking, tension, and color adjustment.

One day, perhaps twenty years from now when the problems of format and of incompatibility are ultimately resolved, it may be possible to turn industrial house organs into TV cartridges or video disc recordings for distribution to the homes of employees; but when that time comes, I suspect that the employee will just dial a company number and get the good news on the large-screen wall attachment of his Color Picturephone.

Sixty years ago, before the days of the filmstrip projector, the 16mm or 8mm motion picture projector, and 99 per cent of the other hardware to be found on dealers' shelves today, Jamison Handy had an idea that people could be persuaded to adopt attitudes and learn new skills through the use of pictures, and more particularly, through a succession of moving pictures.

Handy, now president of the Jam Handy Organization, one of the nation's leading visual communications firms, was then a young man serving an apprenticeship in the communications field as an assistant in the editorial and advertising departments of the Chicago Tribune, who had never forgotten his first realization of the magic of pictures dating back to his boyhood, when he often spent much of his allowance for glass slides to show on his stereopticon.

One of Handy's projects on the Tribune which had given him the greatest satisfaction was the inauguration of a series of pages of popular science pictures — photographs — which showed how things worked.

The illustrated pages, with inspirational articles by Herbert Kaufman, were so successful that they were syndicated throughout the United States and encouraged Handy to leave the Tribune and form a company designed to use pictures in business education and training — the Herbert Kaufman and Handy Company, predecessor to today's Jam Handy Organization.

In a recent conversation with BUSINESS SCREEN's publisher, Bob Seymour, Jam Handy spoke about some of his early experiences in the audio-visual world working with his first client, the National Cash Register Company:

"We found that John Patterson, the president of the company, had over 20,000 slides — glass slides. Many were carefully designed in elementary attitudes to portray buy-and-sell situations, of presentation and acceptance or rejection, right way and wrong way, simple sketches. You could put them together for sales instruction. It was like a Chinese alphabet with 3,000 characters.

Every different facial or bodily attitude, every retail situation could be pantomimed, visualized and il-

Jamison Handy--- Founder of Business Audiovisuals

His career chronicles the history of audiovisuals in business, yet the man who pioneered slidefilms, industrial films, sound teaching, and several mechanical techniques feels there is much yet to be done.

luminated. All the actions and reactions in demonstrating, desirable and undesirable, could at least be suggested, vividly.

"Patterson had long used simple devices to focus people's attention on what he was talking about. Long before he had slides, he had used wooden matches on his desk to represent men. In conversation he would take one match as a body, and the head of the match as the head of a man, and other matches for arms and legs. Whether with one man or a group, he would make a visual impression. He had the same basic audio-visual idea that Tom Edison had. I think he may have gotten it from Edison, who had a conviction that pictures were going on at all times in people's minds. Patterson believed that thinking was in terms of vision. You don't know what mental show your prospect is projecting in his own

brain. You'd better do something to influence what those pictures are.

"You can see that with John Patterson's match men and later his glass slides in 1911, he really had the beginning of a business screen. Our first job at National Cash Register was to inform and enthuse sales people, first with "turnover" charts, which we now call flip-charts. And we also started to train NCR service mechanics with outlines of gears and levers on the charts. John Patterson had one basic idea on those charts which is that no sheet of paper, no matter how big you make it, is big enough for more than one idea, and I've been trying for 50 years to teach that to The Jam Handy Organization and to all its clients."

"About this time some businesses needed technical education so much that they were ready for in-plant schools," Handy told us. "We had one of our first opportunities of this nature working on the problems of servicing the "nickel snatcher" coin boxes of the Illinois Bell Telephone Company. We developed in collaboration with them a program to use animated technical drawings and glass slides to show how coin boxes were constructed, how they worked or failed, and how to fix them.

"Next we got into training long distance telephone operators with phonograph recordings. At the beginnings of long distance operation, the operators couldn't be allowed

Continued on next page

HANDY continued

to gab too freely. We had to figure out the shortest standard way to handle calls with the least conversation. We brought in sound on the phonograph to let operators hear how their own voices sounded.

For years the Georgia "Crackers" couldn't understand the "New Joisy" speech or broad Boston

"A's" or vice versa. Likewise, there was much trouble between the Scandinavians in the Northwest and the German accents in Milwaukee, to say nothing of the Germans in Cincinnati and Missouri. There were all those dialects . . . making it necessary to standardize the phrases to get them to have some sort of common language. So, we brought sound into training, although not yet synchronized with pictures."

At about the same time, Handy began to syndicate motion pictures (sponsored by metropolitan newspapers) on news, travel and particularly on how appliances worked, into motion picture theatres.

"Household appliances and new kitchen conveniences were just coming into popularity in the years before World War I. They were elementary in those days, but people got into trouble even with can openers. They needed at least to know which end was the handle. Women, and men, too, were really interested in that stuff. The theatres had felt there was no entertainment value or audience interest in anything but love, murder, mystery and crime. But we sold the idea that, after all, the people who are coming to theatres are the same people who read newspapers and they are interested in the news. So we succeeded in putting facts in the theatres, along with the fiction. Hearst followed us immediately with the Hearst-Pathé News. During this time, we made a deal with one inventor of the ani-

mated cartoon who had the idea of using transparencies through which you could use the same background through an entire sequence and make the action changes over the basic background picture. We knew Windsor McKay, a cartoonist who was working for Hearst, needed 16,000 separate drawings for each reel of motion picture film. We made a deal utilizing the animated technical drawings. It was probably the first time technical animation was used on the screen.

"We also tried to get schools to do an educational job with motion pictures, but they would not. So, we went into the theatres with entertaining worker education, all with the purpose of putting business on the screen in a useful way. We arrived at the point where we were using animated technical drawings to show how things work and how to work them, when World War I came along. At that time mechanized artillery was coming in. We had

the French 75. We had the machine gun and we were putting internal combustion engines into the ship launches. In the military they were suffering from lack of skilled manpower as were the manufacturers, and they needed mechanical education for drafted men.

"We had to give them training in all things mechanical and we had an opportunity to make a national demonstration in World War I of what could be done with pictures. And we did it.

"During the war, and shortly thereafter we began having a lot of difficulties with motion pictures. Motion pictures in training sessions didn't permit anyone to talk. I wanted learners to talk. The motion picture didn't allow the instructor to talk except in goose-step with the film. Mechanized, up front, he had to look back over his shoulder at the screen.

Or, if he was at the rear of the

room with the projector, he couldn't see the trainees and their faces, which expressed whether the training messages were 'taking' or not.

"So, after the war we were still looking for ways to get people to

talk and to question. Sound pictures hadn't yet been invented. So we had to invent 'talking pictures.' We called them that though they didn't do the talking. They permitted start-and-stop comment while the group looked. So that is when we originated the strip film. We got three inventors working on a start-and-stop film control in a small package. Up to that time, we had only motion picture film in thousands of feet and projectors that only a weight-lifter could lift and move.

"Today, everybody knows what a slidefilm or filmstrip is — a film of slides in a row. The pictures don't move, but they change and can present exhibits with or without text and impel moving pictures in the mind. The first pictures we made with a filmstrip were based on one frame for each scene. Instead of a long ribbon of moving picture films, a short strip with "springboards" was provided for activating minds, with the details left out for illustrative use, supporting talk and for stimulating discussion.

"I realized, long after, that I didn't originate the basic idea. It was suggested by exhibits I had seen as a boy in the "Palace of Mines" at the World's Columbian exposition. I had adapted the idea from the real mineral specimens — not pictures, but brief printed text printed under each. I didn't realize at the time where I got the idea. But maybe 26 years later, I figured I was inventing this simple way of showing things. It wasn't by intention that I found that in the slidefilm I had also a vest-pocket unbreakable substitute for glass slides, as well as the low-cost substitute for yards and yards of costly, tangly film. I wasn't smart

Executive planning session includes (l. to r.): Handy, Hughes Southwell, executive vice president; Robert Thomas, VP-marketing services; Edward Brennan (seated); W. E. Hunter, executive vice president (seated); and Alan Kidd, VP and creative director.

enough to know I had that. I was aiming only to get "talking pictures" as we called them. Why? Because they let the learners talk, they let the teachers talk, everybody could talk. From this standpoint we now had talking pictures. We had to rename them when Warner Brothers' Vitaphone arrived and Fox came out with the Movietone as the successor to the silent moving pictures.

"But, we had sound: first with printed text on the film to be read out loud, and later, recorded sound. Soon we had synchronized recorded commentary if the subject called for it and the listener was informed on the subject. We made separate recordings. We put only the gist of it, the sum and substance of it, in text on film. But we expanded on the text you see, to show pictures of anything that was new in the experience of the audience, so they could see what the instructor was talking about or had to prove or dramatize visually. In demonstrating the first slidefilm machines to prospective buyers the first screen we would use was somebody wearing a light colored suit or uniform, projecting on his back to show that getting or carrying a screen was no problem."

Between the World Wars, the

Jam Handy Organization grew into the largest company of its kind in the country . . . and one of the most innovative. In 1930, JHO produced the first musical comedy at a business convention for the Coca Cola Company. Also in 1930, in Detroit, Jam Handy established the first talking picture studio for industrial pictures. And, in 1937 the first Technicolor business film, *Refreshment Through the Years*, was made for Coca Cola.

During World War II, the Jam Handy Organization produced more than 2,000 training aids for the Army and over 5,000 for the Navy. Handy actually conceived the idea of mounting 16 millimeter motion picture cameras (synchronized to shoot between propeller blades) in combat and reconnaissance airplanes for recording and debriefing purposes — thus supporting verbal combat reports with visual accuracy.

It was also at this time that Handy originated the use of motion picture techniques for flight simulation and target practice to develop and test proficiency in aerial gunnery. In cooperation with the military, he helped to develop over 600 other optical and auditory training devices of a simulative character.

We asked Handy if he thought

we were doing a better job in industrial education now that we have so many modern training tools.

"I am totally unsatisfied with the progress of learning," he said, "because it is still too much of a headache, regardless of the acceptance of ear and eye devices we have obtained.

"There are still too many instructors who pride themselves on the number of students they can flunk. In our military training operations, we learned the practicality of the objective of having 99% of the class learn. Because the penalty of training without each trainee's learning was death. We never made any 100% training objective, but at least we got to the point where the proficiency of the instructors was raised by means of audio-visuals of every kind. Their effectiveness was measured by the number of trainees whom they succeeded in showing the what and the how.

"The 'untrainables' of today are one of our biggest challenges. We are dealing with a dying of know-how — of the skills that haven't been transferred from those who have them to those who do not. People know so many things that aren't so and they see so many things that aren't there.

To be concluded next month

picture parade

REVIEWS AND PREVIEWS OF NEW VISUALS

More than Geology, "Museum" Is Lunar Science

Museum of the Solar System is a 23 minute color film intended to "describe scientific investigations of lunar explorations" . . . specifically the analysis of moon rocks. It does that and considerably more.

Produced and distributed by Stuart Finley, Inc., Falls Church, Va., *Museum* visits the labs of seven of the principle investigators evaluating moon rocks and soil to see how they conducted their studies and what they discovered.

The average viewer of this film aimed primarily at students will find far more interest in the equipment and procedures than in the study results themselves. Nearly resembling scenes from a science fiction movie, some of the testing labs shown in the film are loaded with exotic equipment and provide a colorful and amazing testimony to the infinitesimal minuteness involved in the study of fragments of moon rock too small to even be seen with the naked eye.

In addition to students of all ages, rockhounds, moon buffs and anyone interested in the ways of modern scientific investigation will find this film fascinating. LBG

Live Action Comedy, Animation Used to Sell Newspaper space

The Long Island Press, published almost within the shadow of Manhattan's skyscrapers, is, at the same time, a "home-town" newspaper. Delivered by 6500 carrier boys daily to 455,000 Long Island homes, the Press is the nation's sixth largest newspaper.

To make sure that media buyers will get the message, the Long Island Press is now using a short promotional film in showings for agency men across the river. The film amusingly contrasts crowded subways rush-hour "readers" of the mostly newstand-bought Times, News and Post with the calm, relaxed home readership of the Press.

Al Stahl, of Animated Produc-

tions, which produced the film, shot an opening series of high comedy scenes showing people trying to read a paper on crowded subway platforms and trains. A hand-held, automatic exposure Canon Scoopic 16 camera allowed quick compensation for rapidly changing light conditions.

Following the live comedy are some effective animation graphics pointing up the demographic advantages of the Press over its rivals: higher income readers, richest section of world's greatest market, etc.

Supervising the project for the Press was Graphic Arts manager, Tom Craddock.

Beautyscope—Film Sales Tool for Beauty Salons

Canyon Films, Inc., has just completed production of a series of twelve films for use in beauty salons.

Produced expressly for Beauty Systems International, headquartered in Phoenix, Arizona, the sync-sound color films are made for cassettes which are used in the small portable projector manufactured by the A. B. Dick Company, and called the Beautyscope.

The first series of twelve films covers all aspects of hair care, and are selected, inserted and viewed by

beauty salon clients while waiting for their hair to be set.

Intriguing titles, such as *Miss Haystack*, *Miss Birdnest*, and *30 Minutes to Beauty* enable the client to identify her hair problem and turn to the salon stylist for the exact treatment needed to help her troubled hair. This not only helps the client to feel more secure in knowing exactly what her hair needs, but results in increased business for the salon owner.

The program is the brainchild of Michael Swiger, president of Beauty Systems International. While traveling throughout the United States as guest stylist for Antoine's New York beauty chain, Swiger discovered that women on the whole are not very knowledgeable about their hair although they would like to be, and that salon operators, while skilled in their trade were kept too busy to sell.

The films were shot in 16mm commercial Ektachrome and reduced to Super 8 for packaging in the cassettes. Canyon Films produced the entire series in eight days in its Phoenix studios.

Present plans call for national marketing of the Beautyscope system with international distribution to follow.

Viewing one of the films from the "Beautyscope" package is Sherry Shopanus, one of the actresses in the film series.

ASSOCIATION-STERLING FILMS

Journey In Time, a hard-hitting documentary on drug abuse begins at a teenage glue party in 1966, and follows several real teenagers as they grow up in a drug sub-culture. The film ends with them telling their story to the audience. 26 minutes. Color. For purchase or rental.

Land of 1001 Cheeses takes its viewers on a unique journey through France's cheese country. Historical sequences, animated scenes and actual visits to cheese producers, provide a peek at methods old and new that Frenchmen use to create their superb quality and variety of cheeses. 19½ minutes. Color. Available for free loan.

Assignment 747, a 27 minute film in color, takes viewers on a 747 tour of many interesting parts of the world. Passengers and crew express opinions of this new 350-ton liner of the skies. The film is sponsored by The Boeing Company and is available for free loan.

Bourbon in Suburbia is a dramatization of the first three points of the A.A. program. Anne Francis plays a suburban housewife with a drinking problem. 27 minutes. Color or black and white. Rental or lease.

Confrontation is the story of a priest, a social worker and a college dissenter who are convinced the war in Viet Nam is immoral. Color or black and white. 27 minutes. Rental or lease.

The Dangerous Airs of Amy Clark, 27 minutes in color or black and white, tells the story of the polluted earth of 1986. Rental or lease.

Ecce Homo. The life of Christ is retold in the beautiful art masterpieces of the Byzantine and Renaissance periods. 27 minutes in color. Rental or lease.

Exit tells the story of a college professor who joins the drug culture and eventually, through a series of incidents, is forced to re-examine his values and the life he has chosen. 27

Minutes. Color or black and white. Rental or lease.

Incident on Danker Street studies the investigation of a student police riot. Each side gains insight into themselves and others. Color or black and white. 27 minutes. Rental or lease.

PICTURE PARADE continued
wide talent hunt sponsored by Mobil for the past four summers. It is a visual trip, with the music performed by the steel band, shot on various locations in the metropolitan area, including the Pan American Building, the Statue of Liberty, Central Park, and Palisades Park. It was sent to the Expo '70 in Osaka, Japan for continuous showing in the Youth Pavilion.

STEEL PIPE AT YOUR SERVICE — sponsored by Bethlehem Steel Corporation. This 14 minute film in color opens with a quick series of scenes indicating the diversity of tasks which are performed by steel pipe; then takes viewers on a production tour of Bethlehem's Sparrows Point, Maryland steel plant from the ore docks, through the steelmaking process, to the pipe mills.

HOME SWEET HOME STYLE — sponsored by Archway Cookies and produced by Jason Phillips. Ever wonder where all those really good cookies come from? See this film to learn of the relationship between home-made cookies and the mass produced variety. See the inside of a truly modern bakery and analyze for yourself the similarity of recipes, ingredients, and

the baking technique. The film is 27 minutes in color for schools, adults and TV.

IN PURSUIT OF HAPPINESS — sponsored by the American Plywood Association. This film talks about man and shelter: the imbalances, the practicalities, our chances of straightening out the problems created by more people, more demands on the land, less living space. And it demonstrates that solutions can be found through inventive transformations of familiar building materials into fast, low-cost housing. The film emphasizes that wood is the one most available and renewable resource for construction industry needs. 25 min. color.

BEAUTY TO LAST — sponsored by the Northern Ireland Government Information Service and is a 20 minute film for television. This is a fascinating look at the Northern Ireland of yesterday, today, and tomorrow as seen in its coastal regions, its countryside and its people.

IN THE KITCHEN WITH THE AVOCADO — sponsored by California Avocado Advisory Board. This visually stimulating educational film shows how to select, ripen, store, cut,

peel, and seed avocados. Ideas for a wide variety of ways to use the avocado in breakfast and main dishes, salads, dips and sandwiches are "mouth-wateringly" demonstrated. 3 minutes in color for television.

NATIONAL AUDIOVISUAL CENTER Washington, D.C. 20409

Here's Help summarizes treatment and rehabilitation programs for drug abusers. This film was produced by the National Institute of Mental Health and is available for sale or loan. 29 minutes. Color.

Operations With Whole Number was produced by the Office of Education. It explores procedures for interrelating addition and subtraction and multiple techniques for improving instruction in multiplication. 22 minutes in color, the film is available for purchase or rental.

Refrigeration—Introduction to Control Mechanisms explains the function of the automatic controls in the refrigeration cycle and use of the manual control in emergencies. 10 minutes. Black and white. Produced by the Department of the Navy, the film may be purchased or borrowed.

Talking With Dolphins, a 15 minute, color film produced by the Department of the Navy, describes studies and experiments made by Naval Electronics Laboratory scientists in the area of underwater sound. Sale or loan.

Using a Mathematics Laboratory Approach acquaints the teacher with the laboratory and shows activities at several grade levels. Produced by the Office of Education. 15 minutes. Color. Sale or rental.

You and Your Customers dramatizes situations which small retailer may encounter involving customer relations. This 14 minute color film was produced by the Small Business Administration and may be purchased or rented.

Oral Cancer—Detection and Diagnosis, a series of 94 2 x 2 slides in color was produced by the College of Dentistry of the University of Kentucky. It explains the technique used to detect oral cancer and illustrates normal and abnormal oral and perioral soft tissue and shows biopsy techniques. Accompanied by a programmed text, the series is for sale.

SPORTLITE FILMS 20 North Wacker Drive Chicago, Illinois 60606

Courtesy on the Courts, 18 minute golf instructional film, in color, covers ethics, courtesy, customs of play. This is the first National Golf Foundation film to be released through commercial distributor. Sale or rental.

VIDEO PRODUCTION WORKSHOP

March 29 — April 9
Los Angeles, California

*An intensive 2-week
course in all systems of
Video Tape Recording—
using professional
equipment.*

The video tape industry is exploding. Production people are needed in industry, education, medicine, Cable TV and cassettes, as well as in commercial broadcast television.

Now you can get the training to become part of this exciting new industry!

The low tuition fee of \$295 includes 120 hours of classes and seminars conducted by professionals currently active in the industry, plus all materials and use of equipment.

You will "learn by doing," and be involved in an actual show production."

ENROLL NOW! Limited Registration • Write or phone for complete details and application to Bob Larsen, Director.

Frequency-Equalizing Control Center Introduced by Shure

The M63 Audio Master is a frequency-equalizing audio control center for numerous sound shaping and control applications in sound systems and broadcast and recording studios. It is designed for use

with Shure M68 and M67 series of Microphone Mixers and other high level output devices to obtain an almost unlimited variety of response curves.

Applications include converting the output device to a remote amplifier — with equalization — in broadcast stations, equalizing music and program material in studios, frequency shaping to reduce feedback and enhance sound quality in sound systems, removing objectionable high or low frequency noise in public address systems, and providing audio control and monitoring facilities in multiple mixer applications. *Shure Brother, Inc.*

Ampex Introduces Series of Video Production Recorders

The Ampex VPR (Video Production Recorder) Series of one-inch helical scan videotape recorder players has been designed with advanced production capabilities and improved performance for serious closed circuit television use. The four models in the series are compatible with all Ampex one-inch helical scan models now in use.

The VPR-7900 (shown) provides all the control for teleproduction on

any subject. Features include substantially improved time base stability and an additional VHC (very high carrier) standard. *Ampex Corporation.*

circle 202 on reader service card

Videostrobe 800 Made Specifically for Video

The Videostrobe 800 motion-freezing high power strobe light makes it possible to get sharp pictures without motion blur. Tape any rapid motion and on playback each frame looks like a clear photograph. It improves color rendition, eliminates color smear and is ideal for

chroma-key. It is a heat-free light.

Synchronized to the video field rate, Videostrobe 800 looks like a steady light. Each flash cuts video exposure from 1/60th to 1/20,000 of a second. It has a continuous duty flashing capability and produces a light output of 175 foot candles over an area of 100 square feet. *Unilux, Inc.*

circle 203 on reader service card

Anamorphic Lens System for 35mm Cinematography

Todd-AO 35, an anamorphic lens system for 35mm photography, incorporates several new computer-designed concepts. The system is for anamorphic "scope" photography, providing a 2.35:1 aspect ratio. Focal lengths of 38mm, 50mm, 75mm, 100mm, 200mm and a motorized 10 to 1 zoom lens of 50mm to 500mm are available.

Among the features of the lens

system is a constant compression ratio at all focus distances from close-up to infinity. Lenses may be rented through F&B/Ceco Industries. *Todd-AO.*

Auto-Pan for CCTV Surveillance

A heavy-duty automatic panner capable of supporting television cameras weighing up to 100 pounds can be programmed to sweep any indoor or outdoor area on a horizontal plane. It has many applications in areas where TV is used for surveillance.

Engineering features include heavy-duty aluminum construction and roller bearing support throughout and a dual motor designed to stand up under continuous operation. *Vicon Industries, Inc.*
circle 211 on reader service card

Cassette Recorder Features Endmatic Shut Off System

The Model F-60 cassette tape recorder features the Endmatic system which provides complete, automatic shut-off at the end of the cassette reel. The tape transport stops, thereby eliminating tape tension and the tape drive mechanism automatically disengages avoiding deformation to the rubber pinch roller. All push buttons return to the "off" position and power is shut off.

The recorder operates on batteries, house current or, with an adaptor, car, boat or trailer battery. *Concord Electronics Corp.*
circle 212 on reader service card

Rear Projection Screens for Various Applications

A wide selection of rear projection screens features a variety of colors and gains combined with high optical quality. The screens have application in industry, training and education and are available for computer and electronic displays, microfilm readers, teaching units, sales, flight simulators and exhibits and displays. *Uni-Screen, Inc.*
circle 213 on reader service card

Weight Reduction Increases Portability of Projector

The MPO Videotronic Super 8 projector has been reduced in weight

from 18 to 16½ pounds. This reduction was accomplished by a review of all components. Wherever possible, without lessening quality, parts were lightened or simplified, for lighter weight and better performance.

The portable Videotronic has a built-in screen measuring 10" x 13" and converts to throw a large wall picture. It has a 15-minute cartridge capacity, uses standardized 18 frame advance, magnetic sound, does not need rewinding or threading. *MPO Videotronic Projector Corp.*

It's Audiotronics' new PVR line... the first family of EIA-J standard format ½-inch Video Tape Recorders to feature the exclusive, revolutionary PROGRAM COMMAND CENTER concept, and the first VTR's versatile enough to handle any job, and engineered to meet any future need.

The exclusive PROGRAM COMMAND CENTER is standard on all the PVR models and puts these important VTR functions at your fingertips: Push button, solenoid-controlled tape transport • Two input video-audio switcher • Stop frame • Audio dubbing • Color-monochrome selection • Slow motion-normal selection.

All VTR's feature automatic tape shut-off, automatic and manual level controls, and complete compatibility with other Type 1 format VTR's.

These key options are available on any model: Time lapse recording, a re-

mote control unit, and a 19-inch rack mount.

BUT HERE IS THE BEST PART... no matter which model you choose, if you decide at a later date you want to add any available feature or option... including color... **NO PROBLEM!** Capability is built-in so they may be added anytime.

Since the Video Tape Recorder is the HEART of your CCTV system, be sure you see The VTR line... the one with the exclusive PROGRAM COMMAND CENTER and the future built-in—from Audiotronics—naturally!

Write for more information. We will also send the name of your nearest Audiotronics Video Systems Representative.

HELPFUL BOOKS AND LITERATURE

Videotape Production Guide
VIDEOTAPE PRODUCTION
AND COMMUNICATION TECH-
NIQUES, by Joel Efrain. Hard-
bound, \$12.95. Published by Tab
Books, Blue Ridge Summit, Pa.
17214.

Here is a useful, very practical
guide to the entire videotape pro-
duction process. Neatly divided in-
to two parts, "the medium" and
"the message", this well illustrated
book is a solid guide to production,
direction and program creation in
the videotape format.

Included in "the medium" are
helpful tips on equipment selection,
lighting techniques, direction tech-
niques and a multitude of other
production advice.

"The message" section could be
the most helpful of the two sections
for the user in that it covers the
importance of pre-production plan-
ning, ideas, focus, form, talent and
working relationships of the people
involved.

As a whole, the book nicely com-
bines the importance and relation-
ships of both creative and technical
aspects of videotape production.

NAVA Equipment Directory

The revised 1971 Audio-Visual
Equipment Directory, published by
the National Audio-Visual Associ-
ation, will be available for purchase
in late February. It contains photo-
graphs, specifications and prices of

more than 1,300 current models of
equipment. Over 450 manufacturers
are represented and more than
1,900 items in 62 categories are
featured.

Uniform listings allow easy com-
parison of all items. Also included
are sources for hundreds of special
accessories and devices; charts for
films and tape running times and
screen sizes; and manufacturers'
trade names. Copies are \$8.50;
\$7.50 if payment accompanies or-
der. *National Audio-Visual Associ-*
ation, Inc.

Telephone Training Program

"Telephone Dynamics" is an ad-
vanced cassette tape and workbook
program in telephone skills created
for personnel who make and receive
important calls. Interacting with the
recorded tape and workbook exer-
cises, secretaries, sales and admin-
istrative personnel, even executives,
learn such things as dealing with
complaints; getting through to the
right person quickly; recording vital
information; collection, sales, and
service techniques; etc.

The complete program includes
tape recorder, cassettes, workbooks,
supervisor's guide, message pads
and telephone pick-up and sells for
\$99.00. *Universal Training Systems*

If you're in a bind for lab service, Reela can bail you out.

When deadlines loom large, and you keep running into one delay after another, call Reela. Nobody offers faster service. And nobody will give you better quality work.

Reela's speed and high quality come about because of three things:

1. Competent, dedicated people.
2. Jet transportation, and an outfit that knows how to exploit it.
3. Sophisticated new equipment.

How many release prints do you need — 20? 100? Reela can make them.

Perfect. Sharp. Color-balanced. Back in your hands (or drop-shipped if you want) before you know it.

Why settle for less than the best? Call Reela now.

REELA OFFERS:

- Complete editorial services
- complete producer's services — animation — titling — sound
- complete 8, 16, and 35mm laboratory services, including black and white or color dailies for Florida filming
- Super 8 printing and cartridgeing.

Economical
Business Tools
For the 70's

It's amazing what you can still buy for \$10,000.

When your company is trying to make an impact with its message, \$10,000 doesn't go very far these days.

It could buy you one page in a national magazine with limited circulation.

Or a one-minute spot on network TV. (Class D time, of course.)

Or maybe a few ads in a newspaper.

And that's it. Finished. You've shot the budget.

But take heart. There's still one medium where your company can buy a whole year's program for \$10,000. A medium that's so versatile, you can tailor it to pinpoint the audiences you want to reach. So that every dollar works twice as hard.

We're talking about business sponsored films.

Through Modern's seven highly-developed channels of distribution, we can take your filmed message and put it where it will do the most good. Consistently.

More important, we can do it many different ways.

For example, with \$10,000 a year you can reach 5 million TV viewers, and 200,000 members

of school and adult groups.

Or, if you like the prestige of being seen with top-name feature films, we'll bring your story to 2.5 million theatregoers.

Or maybe you want to reach community leaders, students, and people who travel. We'll introduce you to 250,000 of them—at their own request!

And that's just a sample of the flexibility and impact you can buy with a year's sponsored film program.

If you'd like to know more, give us a call. We'll show you how far \$10,000 can really go.

AURICON 16mm Sound-On-Film for Professional Results!

Auricon
Hollywood

ALL AURICON EQUIPMENT IS SOLD WITH
A 30 DAY MONEY-BACK GUARANTEE.

"CINE-VOICE II" 16mm Optical Sound-On-Film Camera.
★ 100 ft. film capacity for 2¾ minutes of
recording; 6-Volt DC Converter or 115-Volt AC
operation. ★\$1180.00 (and up).

Auricon
Hollywood

"AURICON PRO-600" 16mm Optical Sound-On-Film Camera.
★ 600 ft. film capacity for 16½ minutes of
recording. ★ \$1820.00 (and up) with 30 day
money-back guarantee.

Auricon
Hollywood

"SUPER 1200" 16mm Optical Sound-On-Film Camera.
★ 1200 ft. film capacity for 33 minutes of
recording. ★ \$6425.00 (and up) complete for
"High-Fidelity" Talking Pictures.

Auricon
Hollywood

"PRO-600 SPECIAL" 16mm Light-Weight Camera.
★ 400 ft. film capacity for 11 minutes of
recording. ★ \$1620.00 (and up).

Auricon
Hollywood

PORTABLE POWER SUPPLY UNIT — Model PS-21... Silent
in operation, furnishes 115-Volt AC power to drive
"Single System" or "Double System" Auricon
Equipment from 12 Volt Storage Battery, for
remote "location" filming. ★\$337.00

Auricon
Hollywood

FILMAGNETIC — Finger points to Magnetic pre-stripe
on unexposed film for recording lip-synchronized
magnetic sound with your picture. Can be used
with all Auricon Cameras. ★\$1325.00 (and up).

Auricon
Hollywood

TRIPOD — Models FT-10 and FT-10S12...
Pan-Tilt Head Professional Tripod for
Silvet-smooth action. Perfectly counter-balanced
to prevent Camera "dumping." ★ \$406.25 (and up).

Strictly for Profit CHOOSE AURICON

If it's profit you're after in the production of
16 mm Sound-On Film Talking Pictures, Auricon
Cameras provide ideal working tools for shooting
profitable Television Newsreels, film commercials,
inserts, and local candid-camera programming.
Now you can get Lip-Synchronized Optical or
Magnetic Sound WITH your picture using Auricon
16 mm Sound-On-Film Cameras. Precision designed
and built to "take it."

MANUFACTURERS OF PROFESSIONAL 16MM CAMERAS SINCE 1931

circle 101 on reader service card

A PRESCRIBED ABORTION. A recent conversation with a top notch motion picture engineer disclosed a problem that west coast laboratories are encountering when using the new reversal color internegative film for the production of 35mm color release prints. He stated that it was necessary to print the 35mm color reversal internegative "through the base" (base to emulsion), so that release prints made from such a negative would have the standard 35mm emulsion position, which incidentally is away from the projection lens. His concern was in regard to the loss of image quality encountered when printing the photographic image through the base of the original negative. His problem struck a very discordant note with me because one of my pet peeves is the so called "standard" emulsion position of 35mm prints. Film has always been loaded into a camera with the emulsion toward the lens. Engineers in our industry would never consider turning the film over, causing the small bundle of light rays of the image to pass through the transparent base material onto the emulsion. It is obvious that a terrific deterioration of image quality would result. So, after the original 35mm negative was exposed with the emulsion toward the lens, it was processed and a positive print was made. The best possible print definition was achieved by good continuous contact printing, *emulsion to emulsion*. To maintain correct right and left orientation of our image it was necessary to project the print with its resulting "mirror" image so that the emulsion was away from the projector lens—in a "reversed" position.

As our industry grew and many prints were needed, it was necessary to protect the original negative from wear, so it became normal procedure to make a master positive print and from this master a duplicate negative was made. This dupe negative resembled the original negative in photographic characteristics and image emulsion position. Release prints made from the dupe negative had the same "reverse" emulsion position as a print from the original negative.

Are you aware what our industry has foolishly been doing for years in either procedure? We make 35mm release prints that have to be projected in such a manner that our beautiful photographic image must pass through the acetate base of the print on its way through the lens to the screen. Today, no engineer would recommend such a procedure but our industry not only sanctions it but makes it routine. Normal practice today in the optical industry is to avoid passing images through glass whenever possible, so front surfaced mirrors are commonplace. Many modern reflex cameras use front surfaced mirrors in an effort to obtain optimum image definition even for view finding.

For years I have wished for a process that would eliminate the master positive step. Such an innovation would not only eliminate one printing and one film step, but would produce release prints with an image emulsion position that is "forward"—toward the projector lens, thereby eliminating any loss of definition caused by passing the photographic image through the base of the film.

About fifteen years ago a producer brought to our laboratory a 16mm original black and white negative prepared in A & B rolls and ordered an answer print. The print was accepted by the client and an order was placed for a large number of release prints. We could not risk printing the large order from the orig-

inal A and B negative rolls, so we made the usual composite picture master positive and the subsequent dupe negative. The loss introduced in these two film steps produced a print which showed appreciable loss of definition when compared to the print from the *original* negative. At that time, it so happened we had been making tests in an attempt to use Kodachrome camera stock as a reversal internegative. We had not been satisfied with the color that we obtained, but we thought that this method might prove satisfactory for a black and white image. A negative intermediate was made on Kodachrome and a print from it was enthusiastically approved by the customer. We had achieved several things—we protected the original negative, we reduced the price of the print by printing from a single roll instead of A and B, we improved the quality by eliminating the master positive film step, and we improved definition on the screen because the emulsion position was toward the projector lens.

In the early days of television we were making 125 prints of a weekly half hour show. The subject matter was so timely that speed was imperative. It was photographed each Monday with multi camera technique onto 16mm black and white negative, and all release prints with an emulsion position away from the lens were shipped Tuesday. The release prints were developed, waxed, shipped and run on television projectors in a matter of hours. Because such prints were still "green" (unseasoned), we received many complaints from stations claiming that prints jumped and emulsion had a tendency to pile up in the gate of the projector. We experimented with many types of drying conditions and many types of waxes, but to no avail. In desperation, the show was photographed on reversal film from which a dupe negative was made, and release prints were made from the dupe. These release prints were made and shown under the same identical conditions as the release prints from the original negative, but because the emulsion position was now toward the lens—"forward," all the complaints disappeared. Additional tests convinced us that all projection prints regardless of format should have a "forward" emulsion position.

Recommended practice today (with which I disagree) states that 35mm projection prints should have an emulsion position away from the lens and this position is called "standard." In 16mm and 8mm however, the recommended standard emulsion position is "forward" or toward the projection lens. So 16mm and 8mm actually have better standards than 35mm! So you can see why my friend's remarks disturbed me. A film manufacturer had taken the initiative to research, design, and manufacture a great new product—color reversal internegative—designed to improve color and definition. A side dividend was the fact that it put the image emulsion position of 35mm where it should be. Why then should we lose the benefits by compounding our errors and introducing more distortion by printing the negative through the base? My friend commented that if labs furnished prints with a forward emulsion position, problems might be experienced because of the failure of the theater projectionist to refocus. This is not a valid excuse for delivering an inferior product. Improved tools are great, but we must learn how to use them!

INTRODUCING...

GEORGE A. GLENN

The month of March has brought a number of changes and additions to **BUSINESS SCREEN**. With this issue we will be introducing innovations that we hope will be of value to you, our readers.

Before we highlight some of them, allow me to introduce myself, George A. Glenn, newly-appointed editor-in-chief of **BUSINESS SCREEN**. I began my career in the communications field in 1950 as a television actor in New York. From there, I went to California where I produced and directed my own radio show for several years. Since 1953, I have been editor of trade magazines representing markets ranging from premiums to food, drugs, home furnishings and food service.

Let me also introduce Michelle Bender, new Senior Editor of **BUSINESS SCREEN**. After graduate school in communications, Miss Bender began her career in the media as a news reporter for a Chicago wire service. Since then, she has worked as editor and writer in several areas of the publishing field, and was recently

responsible for promotion of one of New York's most original film festivals.

This month has also brought a change in **BUSINESS SCREEN**'s location. Our editorial offices are now centered in New York. From this vantage point, we believe we will be able to offer an even more consistent and thorough coverage of fast breaking developments from coast to coast in the business screen industry.

Promises of things to come include the "Film Lab Directory" which has a new format in the April issue. This new format will make it easier for our readers to find quickly the information they are seeking.

Also coming is the comprehensive cross country roundup, pinpointing the state of the film lab industry as key members of the industry see it. We think you'll find the report revealing and encouraging.

BUSINESS SCREEN will maintain the continuity necessary to interpret the tempo and events of the business film and audiovisual world. The editorial staff is devoted to making the magazine an ever increasingly important tool for its readers in the months ahead.

Since communication is our goal, and the most effective communication is through dialogue, we welcome suggestions and responses from you, our readers. We look forward to building warm and fruitful associations with you in this new decade—the decade of **BUSINESS SCREEN**.

MICHELLE BENDER

... **GLENN**

write.

We created these new audio visual facilities especially for you. Here you'll find the most sophisticated equipment available today; everything from rear screen projectors to closed circuit television systems. Loaded with film or tape and ready to operate. But if you can't come, write for our new catalog.

Besides representing most of the leading manufacturers of A-V equipment, we have one of the largest rental inventories of projectors anywhere.

You can rent from us by the day, the week, or the month.

Or you can buy from us.

In either case, we brief you on the available equipment. Familiarize you with the way it works. Assist you in selecting the projector best suited to your needs. And put the entire package, film and projector, in the hands of your salesman.

Visit our new A-V facilities and get the complete picture.

But if you can't come, write for our new catalog.

REVIEWS AND PREVIEWS OF NEW VISUALS

AUDIENCE PLANNERS

208 South LaSalle Street
Chicago, Illinois 60604

Good People, a 30 minute color film about the handicapped and about Hughes Aircraft, a company that trained some of the best workers in industry by giving them a chance. The film was produced for the President's Committee on Employment of the Handicapped.

City For All Seasons provides viewers an interesting travelogue showing London during each of the four seasons. The beauty, gayety and pagentry of this world capital is captured in this 20 minute, color film.

Towards a New World, 20 minutes in color, presents the story of the Pilgrims who sailed to America and how they lived before their departure. It shows the places where they lived and worked and even shows ancestral homes of famous Americans. It's part of a series sponsored by the British Tourist Authority.

Fashion Designs on You, produced by the American Wool Council, presents the mini, midi and maxi against a background of music, lyrics and dance. 27 minutes. Color.

THE COLLEGE OF INSURANCE

150 William Street
New York, New York 10038

What Do You Want? describes the work-study program at The College of Insurance. This is a fully-accredited co-educational institution offering two degrees. Students alternate four month periods of classroom study with on-the-job experience. 22 minutes. Color. Free loan.

MODERN TALKING PICTURE SERVICE, INC.

Hit Like A Pro—sponsored by Montgomery Ward and Company and produced by Betzer Productions. Stan Musial, all-time great St. Louis Cardinal baseball star, demonstrates the fundamentals of hitting like a pro in this 18 minute film in color. He shows youngsters how to select a bat for weight and length and also the stance to take in batting for bunting, and grounding the ball or for long flies to the outfield.

Wondering About Things—sponsored by Dow Corning Corporation and produced by Wexler Film Produc-

tions, Inc. This 20 minute film in color discusses the complex interrelationships between science and life today. Men and women from a broad spectrum of creative fields—ranging from a rock and roll musician to a scientist who is sending probes to Mars—are questioned about their creative efforts. Their varying answers, reinforced by visual evidence, add up to an agreement that science, wisely used, is an indispensable part of mankind's hope for the future.

Golf's Golden Years—sponsored by Uniroyal, Inc. and produced by Du Art Film Laboratories. Narrated by Bing Crosby and Chris Schenkel, this 28½ minute film in color will appeal to golfers and non-golfers alike. Traces the evolution of the golf ball and golf club from their beginnings in Scotland to the present day. Some excellent shots of many of Scotland's finest golf courses with special emphasis on historic St. Andrew's.

The Second Side—sponsored by The Ex-Cell-O Corporation. Produced by Wilding, Inc. This film tells the story of the disposal of solid waste, generated by industry. The fact is, that the increasing needs of the public for packaged products can be met without endangering the ecological balance of our urban and rural areas—this film relates how. 14½ minutes in color.

Lure of the Lakes—sponsored by Wright & McGill Co. and produced by William G. Beal, Inc. This 28½ minute film in color follows Roger Latham, wildlife authority, outdoor writer and conservationist as he goes fishing for the hard-fighting black bass in the beautiful man-made lakes of western Kentucky. In addition to all the excitement of fishing, there are many fascinating vignettes of wildlife

and outdoor scenes filled with beauty and action. For television.

Where To?—sponsored by the International Brotherhood of Electrical Workers and produced by Allied Motion Picture Center, Inc. This 27½ minute film in color is a stirring and challenging story about our country in these troubled times. In a series of dramatized confrontations, filmed against the backdrop of Washington, D.C., a cross-section of Americans take stock. What route have we taken? Where are we today? And, "Where To?"

THE JAM HANDY ORGANIZATION

2821 East Grand Boulevard
Detroit, Michigan 48211

Attitude—the Human Side of Quality Control is a series of six discussion conferences aimed at training and development of middle management and lead personnel, wherever supervisory responsibility has been accepted. Emotional attitudes are a major obstacle to quality control among the old-timers and the new trainees. This series offers new presentations of old motivations when trainees are considered untrainable.

ROUNDTABLE FILMS

321 South Beverly Drive
Beverly Hills, California 90212

Talkback—A Study in Communications emphasizes that clear directives, constructive feed back, and an atmosphere open to dialogue help to eliminate many misunderstandings in organizations. A Rank A-V Ltd. Production. 18 minutes. Black and White. Sale or rental.

Fault Analysis proposes 6 steps to efficient trouble shooting: collect and analyze evidence; locate the fault; determine and remove the cause; rectify the fault; check the system. A Rank A-V Ltd. Production. 14 minutes. Color. Sale or rental.

Who Killed the Sale? is a case study showing how everyone in a company can affect sales. A Rank A-V Ltd. Production. Sale or rental.

Count to Ten, a 26 minute film in color, is designed to teach people in public contact positions that they can maintain the goodwill of a customer even when they must stick to "company policy". Sale or rental.

PICTURE PARADE

Underwater Film Special Set for Chicago May 1

"Our World—Underwater", a day long symposium and film festival will be held May 1 at Chicago's Medinah Temple. Sponsored by the YMCA Metropolitan Council of Skin and Scuba Clubs, the main theme of the event is the maintenance of our natural resources and the spreading of thoughtful attitudes toward diving.

Philippe and Jean-Michelle Cousteau will be among many renowned experts on hand to share underwater films and exploits. The symposium will consist of two sessions: "Man's Adventures Beneath the Surface"; and "How Man Can Survive Underwater—How the Waters of the World Can Survive Man."

Included in the evening film showings will be the world premiere of Stan Waterman's adventure film *The Great White Shark*. Tickets (\$5.00) and information may be obtained by writing Our World-Underwater, P.O. Box 643, Wheaton, Ill. 60187.

ASSOCIATION-STERLING FILMS

Where Do We Go From Here? The struggle to help New York's aging subway and commuter railroad network

recover from decades of financial malnutrition and the planning and construction of 52 miles of new subway routes and other major transportation improvements are the subject matter of this 27 minute film produced for the Metropolitan Transportation Authority by Spectrum Associates. Free loan.

Kokoschka Paints Adenauer gives rare glimpses of the surprising relationship that sprang up between the impressionist painter, Oskar Kokoschka, and Germany's first postwar Chancellor when the elder statesman sat for the artist in 1966. This 13½ minute film in color is from the German Information Center. Free loan.

Camille, The Road Back, sponsored by the American Trucking Association, tells the story of the trucking industry's efforts to prevent the disaster of Hurricane Camille from becoming a catastrophe. 15 minutes. Color. Free loan.

Invitation to Taiwan encompasses oriental history and culture of what Portuguese explorers aptly called "Island Beautiful" (Formosa). Presented by the Tourism Council of the Republic of China. 26½ minutes in color. Free loan.

The Presentence Investigation Report . . . A Tool of Justice is a filmatic study of an important weapon in the arsenal of justice, the presentence re-

port. A CCM Films Presentation. 15 minutes. Color. Sale or rental.

Who Am I?, a CCM Films Presentation, is a training film concerning the role of correctional officers and personnel towards offenders and how they best function within a system designed to rehabilitate. 15 minutes in color. Sale or rental.

The Wonderful World of Wine, 20 minutes in color, presents the magic potion that has accompanied elaborate dinners of European royalty, been used for medicinal purposes and haute cuisine for centuries, and always been a pleasure for people the world over. Presented by the Wine Advisory Board. Free loan.

National Membership Contest

A concerted drive to bring professionals together for exchange of ideas, ethics, and practice is underway through the end of April 1971.

New applicants must be sponsored by a current member, either at-large, or a chapter member, and then they themselves become eligible to recruit.

A prize is offered for every new member obtained. Applicants must qualify and be actively engaged in the profession in some creative, technical, or managerial capacity. Disciplines include non-theatrical filmmaking, television, and multimedia audio visual specialists and communicators.

Members should check with either their chapter membership chairman, or the National Vice President Membership and Chapters East or West, P.O. Box 1470, Hollywood, Calif. 90028, for contest information and membership applications.

Need A Program?

Does your chapter, lodge, society, club, or service group need an outstanding program? IFPA has a couple of ideas for you: 1) Each year you may select a "Cindy Award Winning Film," of the cindy library. These films have been "tested, judged, and recommended" to provide entertainment and information of wide and general interest. Films are loaned with an inspection, mailing, and handling charge of \$2.50 each. 2) Reel tape or cassette recordings of lectures and presentations by leading experts and specialists in audio visual communication recorded at IFPA National Conferences can be borrowed for replay. 3) Reprints of major presentations for IFPA Conferences will be available April 1, 1971. These contain 15 speeches ranging from: "Ethics and Practice" to "Video Tape and Cassettes," and sell for \$10.00. They include both technical and creative information available only through this means. Write to IFPA "Cindy Library," or "Proceedings," P.O. Box 1470, Hollywood, Calif. 90028.

Do you have a place to put me?

I'm the new Norelco Synchronplayer.

I play cassettes. I synchronize slide presentations. Put me in a carrying case with a slide projector and you can have an audio-visual presentation anywhere. Or build me into a desk, table or study carrel and I'll be part of your furniture. I'm designed for training, selling, demonstrating. Either individual or group use. You'll find me very reliable, compact, easy to handle . . . and not expensive. But, remember, I'm a flush-mount component. You must have a place to put me.

For all the facts and information about what other companies are doing with the Norelco Synchronplayer, call us at 212-667-4400. Or write to us care of Dept. BS-1, 100 E. 42nd St., New York, N.Y. 10017.

How to project a better sales picture in 1971.

Let your salesmen carry the Bohn Benton Institor; an elegant, rear screen, Super 8, sound and motion picture projector.

It's light, only 17 pounds.

It's simple to operate. In less than 30 seconds, you can have it set up and running in broad daylight.

It's cartridge loaded. There's no film threading.

It's an attache case. Easy to carry. Just 4-inches wide.

And it's sensibly priced. \$300 for single units. Or as low as \$240 in quantities.

The Bohn Benton Institor. You'll be sold on the way it sells.

Bohn Benton Inc.
110 Roosevelt Avenue
Mineola, N.Y. 11501

☐ Send one of your salesmen. ☐ Send one of your new brochures. ☐ Send both.

PARADOX. In order to do outstanding work in the film industry, you must have a very strong sense of personal identity, and you must insist on doing things your own way, but . . . in order to survive long enough to get the chance to do something outstanding, you must lose a lot of smaller battles along the way, and give in to producers and sponsors whom you know to be mistaken in their judgments at the time.

At one time in my checkered career I had occasion to deliver a total of eleven babies in the line of duty, and I think I am reasonably safe in making the statement that no other film writer in our industry is also a registered male midwife. (There are a great many doctors writing medical films, of course.)

But although I have forgotten most of the births I attended, the first baby I ever delivered was a memorable experience, for the simple reason that it was the delivering mother who directed the proceedings. She had taken one look at me when she entered the delivery room and then said, "Don't be nervous, Sonny, I've had nine babies and this is my last, and I'll tell you exactly what to do when the time comes." She then grasped the leather strap at the top of the table, and proceeded to tell me exactly what to do. I think that was when I first began to respect expertise purely for its own sake, admiring the sheer technical performance of someone who is very good at what he does, regardless of what else about him is either right or wrong.

Another example that comes to mind is watching my mother make Hungarian strudel dough in her earlier years. She would start with a glob of dough about the size of your fist in the middle of a large table, and slowly lift and stretch it with her fingertips until it was as thin as tissue paper, and covered the entire table, about the size of a pool table, without a single rip, tear, or hole.

I was watching a real pro of a projectionist recently handling a multimedia presentation in the round I had written. It was beautiful to see him run smoothly through his procedure, anticipate equipment foul-ups, and then correct them when they occurred.

(I've also seen plenty of the opposite situation, when something goes wrong and everyone stands around wondering what to do next.)

Mechanical problems are sometimes difficult to solve, sometimes impossible, but with a technical problem you can at least figure out that you can't figure out the answer. Not so with creative problems.

Creative problems may or may not have answers to them, but the first tough job is to try to determine what the problem is, then whether an answer is possible, and finally what the answer might possibly be. It tries a writer's patience, if not his very soul, when neophytes keep coming up with the same tired ideas as if they were originals. They *are* original, of course, so far as the newcomer is concerned, but that doesn't necessarily mean they're equally fresh to everybody else. It's at times like these that you simply have to pull yourself together, draw upon your ego-identity strength and say "No, that's wrong. It won't work and it will ruin the picture."

Of course, that's very easy to say after you're established and have the respect of your clients and producers, so they'll listen to you. But if you talk like that when you first get *into* the film business, you're probably going to be *out* of the film business before you're out of your twenties.

But I draw a very sharp, clear distinction between having strong convictions and just plain stubbornness. (Lately I notice that other people are just plain stubborn more often now, whereas I have the strength of my convictions which comes from a secure ego.)

That last statement is something like the difference between gimmicks and devices. I decided years ago that "You gotta have a gimmick!" just wasn't true for me. In fact, I often say that other writers use gimmicks, whereas I employ devices.

I've had many assignments in that curious world of "financial public relations." And last year I had one of my toughest in that field. The client was a financial PR man who had been a writer in his early years, as is often the case with financial PR professionals. In fact, many of them still keep a typewriter in their office, sort of like engineering VPs, who keep slide-rules in sight on their desks. It's a way of

'showing the flag' or something, even though they may not have used a typewriter or slide-rule for years.

Well anyway, this *client*, (I can think of no other word for him,) kept pulling rank on us during the production of the picture. He added extraneous scenes, flustered the narrator during the recording, threw in new copy at the interlock to compensate for the silly scenes and the bad reading, and just generally acted like Peck's Bad Boy. We would fight with him almost all the time, trying to prevent him from inserting his sophomoric notions and print-media suggestions into the picture. Normally his reaction was, "Dammit, I'm the client, and this is the first motion picture our company has ever made, and this is going to be done the way I want it done!"

Needless to say, he got his way, and when the picture was shown to the board of directors they decided not to release it. Part of this decision was due to the depressed state of the stock market, but a lot of it was due to the fact that it was a simply awful picture. After the debacle of the answer print showing, he said to his company president . . . "Well, Jim, we got the best professionals money could buy, and still they made a mess of it. I tried, Jim, you can ask them, I fought them every inch of the way, but I just couldn't save it!"

I know what you're saying. Readers, you're saying to yourself, "So what else is new? That's the story of my life in sponsored films." Well, Friends, there *is* something new. I can now tell you of the story of another client, 180 degrees from the one above.

This also was a financial public relations picture, and they also were making their first image film, and

Fifteen reasons why the MPO Videotronic Super 8 is the best automatic portable projector for you.

Weight: 16 lbs. 8 oz. (3 to 5½ lbs. lighter than competition.)

Portability: Folds to brief case size, fits under plane seat.

Built-in Screen Size: 10 x 13". (Larger than competition.)

Additional Capabilities: Long throw, large wall picture without any attachments. Extension speaker or earphone jack. One hour capacity reel-to-reel capability. (50% brighter and sharper wall screen picture than competition.)

Film-Sound Advance: Industry standard SMPTE-approved 18 frame sound separation.

Magazine: 15 minute capacity. No threading. No re-winding. Non-slip large sprocket drive. Built-in film guide, indestructible nylon rollers and anti-set controls to safely handle even roughly slit prints. (The only magazine with all these features.)

Film Gate: Permanent part of projector, precision tooled and machined to eliminate film scratching. Built-in film scanner in the gate. (All competition uses inexpensive stamped-out gate in magazine.)

Film Propulsion Through Projector: Claw plus non-slip sprocket drive—no friction on picture portion of the film. (No rubber rollers to collect dirt and press on picture area.)

Rear Projection: Uses only one small mirror. (Competition has two or more. There's a 15% light loss at each mirror surface.)

Lamp: 150-watt—21 volt quartz halogen. (Almost twice as bright as competition—longer life.)

Amplifier: Solid State 5-watt. (Competition only 3-watt.)

Operation "Noise": 40% quieter than competition by actual instrument test.

Accessibility: User can quickly and easily reach any part of projector or interior of magazine for cleaning or inspection. (Other projectors require intricate disassembly.)

Guarantee: Full year. (Eight months longer than competition.)

Easy Payment: As low as fifty cents per day on long term lease plans. (No other projector manufacturer has the low-cost lease plans offered by MPO. Most trade-ins accepted.)

PARADOX:

they didn't leave us alone to go make them a picture any way we wanted to. They were available for script meetings, they were at the studio shooting, they checked the location dailies and the stock shots, they were at the music recording, the narration, the mix, the interlock, and the first answer print showing. And they exerted their controls at all of these key check points.

But . . . they listened to reason. They didn't try to impress us with their machismo. They didn't lean on us . . . they inspired us. And the picture that resulted is inspirational. Not just to their own people, but to people who never heard of them or their company or their product. It's a great picture. It will win every single festival it is entered into. And it will set new guidelines for excellence in financial public relations films.

The irony of these two pictures being made, both at the same time, for the same budget, and directed at the same audience, has not escaped me. I am proud of one of them and ashamed of the other. And I now think that I should have taken a stronger stand on the first picture and refused to make the changes, even if they called in another writer.

Over and over again we kept saying to each other . . . "Believe me, if it wasn't for the money we wouldn't do this." But humor can only help up to a certain point. The line between comedy and tragedy was never fuz-zier.

I admire people with integrity. I admire people who do their work well. I like to watch a good technician at work, even if I don't understand what he's doing or how he does it. I am fortunate to work with a great many people whom I can admire for all of these foregoing reasons.

There are many production people, sources, and companies listed in this issue of Business Screen. I am proud to know a lot of them personally. I have watched a good timer work on an answer print for hours without being satisfied although I can't imagine how he learns his trade.

I have sat in the next room making changes on a script while a good film editor goes back and forth on the moviola over the same scene thirty times, moving the voice, cutting the music, adding a frame of picture here and cutting two frames away there, and I find myself in awe of this insistence upon perfection. I try to emulate it whenever I can but I suppose that I fail more often than I succeed.

I only wish that I had some way of helping younger people who get into the film business at a level where they must accept bad suggestions from the people who pay the bills or sign their paychecks. I have no romantic notions about the young. I know how often they are wrong, but . . . I also think they deserve the benefit of the doubt whenever they come up with something really original.

I'm lecturing to two groups of young filmmakers this month, and although I will be talking to them as the "expert," I expect to learn as much from them as they will learn from me. Like that mother of mine I mentioned at the beginning of this column, I hope to give them the benefit of my own experience, so that they can go on with a sense of security to their own "deliveries" of the future.

First you have to know your business very well, and then you have to go on to take a stand for what you know is right or wrong. I didn't really want to get into the youth thing in this column, because I'm going to devote an entire column to that subject in another issue, but the basic point is that we can learn something from these youngsters with the strength of their convictions, but only if we're not too stubborn to change.

The Linguist.

Crashing through language barriers is a snap for the handsome, new Mastermatic® II 35mm filmstrip projector.

Ever try to make a sales point to a roomful of brokers with a filmstrip that talks Distributorian? Forget it! They talk languages as different as Latin is from Swahili. Or Elementary from High School Level English.

Imagine how great you'd feel walking in to give a presentation confident that the voice track on your filmstrip will talk in the idiom of that particular audience.

That confidence is what Mastermatic II is all about.

And Unipak™ is the heart of it. Unipak is the nifty little snap-in cartridge that holds the 35mm filmstrip (a continuous look of up to 200 frames), the audio track subcartridge (with a continuous loop of up to 30 minutes), and the prism mirror. And that's the whole

ball of facts!

Nice thing is that the audio track snaps right out so you can snap in the track that talks in whatever language or level your audience understands best.

And look, no hands! You never touch the film or the audio tape so both of them last as long as you have audiences to show them to. More?

Mastermatic II has all solid state, plug-in circuits so you can flip it on and go. Now No warm up And IC's for reliability And a big, bright 500 watt lamp so both front and rear projection is clear and sharp from any angle in the room And a frame lock to hold the picture where it belongs And separate advance and

hold frequencies for response and restart so you can program pauses to suit your presentation to your audience.

And a more efficient cooling system And a jack for optional remote control And, just for show, a really great looking slimline case that says a lot about your presentation before you even start.

And you thought our Mastermatic I had everything a 35mm filmstrip sound projector needed.

Write now for Mastermatic II specs. They'll prove our point. In your language. Optisonics Corporation, Montgomeryville, Pa. 18936.

THE MASTERMATIC II Projector is covered by issued and pending U.S. and foreign patents.

CLICK

Your sales veep's working on his traditional, "Now this chart (CLICK) shows...", slide presentation. Marketing wants a film. Now's the time to spring it.

A hyped-up slide show that takes the dull out with a fast-paced presentation. One they'll remember. One that has dissolves (from 3 seconds to super slow). Reverse dissolves. Fast cuts. Fadeouts. Animation. And up to 282 slides without sweating a tray change. The kind of things you think of only in terms of film.

You do it with our system. All solid state. Lightweight. Easy to maintain. Very durable. And darn good looking.

The system begins with the Dynamic Dissolve. Very dynamic. Nowhere else can you get anything so compact and versatile that'll do all ours can. Nowhere.

The dissolves are beautiful. There's no dimming on the screen. The brilliance stays the same. And the changes can be made from the dissolver, remote, or our Media Mix Programmer. And that dissolve unit will work with our Selectroslide projectors or Carousels. Whatever you want.

Oh yes. The system doesn't cost an arm and a leg, either. Find out all about it.

For all the information, ask your local S & S dealer or write Spindler & Sauppe, Inc., 1329 Grand Central Avenue, Glendale, California 91201. (213) 247-1610.

The best of both worlds.

Reela's
8MM facilities
aren't just talk.

We'll take care of your
needs right now.

Oh, really?

No, Reela!

How do you want your 8MM?
Super or standard? Color or
black and white? Optical or
contact printed? Silent or sound?
Magnetic or optical track?
Do you need complete lab
work or just loading?
How about titles? Music?
Optical effects?

Reela can do it.

Our facilities are the most
sophisticated in the world...
in layout, in equipment, in
techniques. To top it off,
all 8MM loading is done under

"clean room" conditions.

Send your first order now.
Or if you want further
information, write for our new
price list to Dept. 007

ECONOMICAL TOOL FOR BUSINESS IN THE SEVENTIES

By **MARVIN HODGES**
Director, Sales Development
MP&EM Division
Eastman Kodak Co.

The versatility and economy of Super 8 film combined with emerging product developments promise to make it a viable and important tool for various facets of your business in the years ahead.

By 1975, or even before, your company may be using a *complete super 8 film system*:

- ▲ To provide truly individualized training for your employees, whether they're teenagers learning the basics of production assembly, foreign nationals who don't understand English, or senior men who want to sharpen their job skills.
- ▲ To distribute thousands of short (two-to-three minute) super 8 selling films that demonstrate the features of your product anywhere, anytime—from the counter in a department store, to the private office of your biggest industrial customer.
- ▲ To document field reports covering any topic—from possible plant sites in Arizona (or Africa), to a competitor's latest display in a retail outlet.
- ▲ To produce a monthly "employee newscast," mailed directly to the home and played on the family's own projector.
- ▲ To function as your "complete

and tireless" salesman, especially in enterprises such as insurance selling, where an evening at-home call is essential; the super 8 film, in its own display mode, may even include a sound track that will record customers' questions for feedback to you, once they've seen your filmed presentation at their convenience.

Today, the super 8 film system—as a way to meet the wide range of applications in business communications—must be examined in terms of "potential" rather than "fulfillment."

However, within the next two years, we fully expect to resolve the remaining technicalities (e.g., cartridge system, expanded display modes, lab techniques for direct multiple release printing in super 8.)

The end-result: A super 8 film system that offers businessmen, for the first time ever, a truly flexible, viable, economical, miniaturized motion-picture format. In short—color, sound, motion, convenience, and cost effectiveness.

Let's look more closely at several

"Potential uses for supers is limited by imagination only ... Even literacy problems may be wiped out—learning individualized"

examples and see what these developments could mean to your company. Most businesses, at one time or another, are faced with the need to train employees, whether it's in basic production techniques, job upgrading, or in-plant safety. Experience has shown, again and again, that films enhance a training program by bringing reality into the classroom.

Yet, even today, we tend to limit the use of motion pictures because, under the current film-production system, we must be concerned about cost effectiveness. In many cases, we abandon our goal of individualized instruction and come up with a "large-group" approach in training films.

From this kind of setup—in which we lump all the learners together—we usually find that two or three people, from a class of 30 get the key concepts in the film; another two or three are completely befuddled; and the great majority absorb varying amounts of what we had hoped to teach them *in toto*.

Clearly, many company training departments have been forced to compromise, to offer something less than total success to the employees who are willing to learn, but who require self-paced instruction.

Learning experiences

The super 8 film system in training can change all that. Company instructors will be able to provide each employee with learning experiences in small film capsules, complete with the involvement and excitement that color, sound and motion—plus tireless repetition—can mean for every person in the class. And, at a price the company can afford.

In fact, a recent pilot project is underway at IBM, designed to offer self-paced instruction with super 8 film to newly hired typewriter repairmen. The "graduates" of this program, whose job records are being monitored carefully, turn out

to be better equipped and more skilled in their work from the very first service call they make.

The potential of this film tutorial system is practically limitless. In addition to the fact that each employee can pursue the training at his own pace—repeating a film sequence until he's mastered the technique or concept—there are also other advantages. Since the super 8 format is the first "professional" medium that's truly compatible with the "home market," a filmed course of instruction can be utilized in a variety of settings—for an employee to practice at home; for showings of relevant material to students in the local high school; as program events (and a public relations tool) for the job recruitment and community group meetings. There's *every* reason why the same pictorial content, with modified sound tracks, can be used with all three types of audiences—and more besides.

Ease literacy problems

It's obvious, too, that an economical super 8 film system can alleviate many of the literacy problems encountered by companies that hire the hard-core unemployed or the high school drop-out. In today's culture, even people who can't read or write at an elementary level, turn out to be sophisticated viewers when it comes to motion pictures.

In a similar vein, many companies are now looking to foreign labor markets for increased production capabilities. But the problem remains: What's the optimum approach for training programs designed for people halfway around the world? The answer is clear, it seems to me, with the arrival of individualized super 8 films; portable projection and display systems that can fit into a shoe box; plus sound tracks that can be recorded, and re-recorded, in any language under the sun.

The new employee at the plant in

India would receive the same, carefully structured, automated tutorial program as the new employee in Wisconsin or Florida or California—and at an acceptable cost to the company. The only difference would be the language on the sound track!

Let's move on to the area of sales as we explore the coming trends in super 8. If your company manufactures or promotes a retail product with important "technical" features—anything from water skis to pianos—no doubt you've already experienced the continuing frustration of relying on some unknown store clerk in a distant city to give the customer the salient facts at the crucial point-of-purchase.

Often, your company's brochures or hang-tags go unread in the store. A new sales person may be totally unfamiliar with the unique advantages of your product, or he may botch the in-store demonstration. In many cases, your equipment just can't be shown to the customer in its intended setting—skimming along the water, for example, or rushing down a mountain slope, or nestled in a rugged campsite.

Transport viewer

Again, potential customers, just like new employees, are sophisticated when it comes to motion pictures. What better selling tool could you use than a short (two-to-three minute) color and sound super 8 film in its own self-contained display case, right on the store counter? You can transport the prospect, usually, to any spot on the globe; you can show your product in action and even illustrate the "unseen" quality parts that you build in during key stages of manufacture. In addition, your message will come across the same way each time—just as you intended, with the same enthusiasm at any hour of the selling day.

The only requirement for the store clerk will be to press a button to start the film—and then to write

p the bill of sale!

Likewise, a counter-top film display can be a powerful drawing card for shoppers once they're in the retail outlet—even attracting people who had no idea they'd be interested in your product.

In a similar way, companies will be able to equip their salesmen for more effective customer calls with the super 8 film system. Just as in the retail setting, the motion picture can "grab" the attention of the industrial prospect, showing your product in the most favorable light, complete with color sound, and movement—as well as with unflagging enthusiasm.

This economical super 8 film can also be used to provide constant updating for your company sales staff so they are thoroughly familiar with new products and improvements in the line—whether their sales territory is in the next county or 3,000 miles from the home office.

Monthly updates used

Currently, I am meeting with representatives of a well-known company who want to send out monthly super 8 film updates to their worldwide sales forces. They reached their decision after discovering that the regular printed "bulletin" they mailed to their people went largely unread. One salesman even admitted that he had spilled coffee all over his latest "bulletin" and was unaware, for several days, of the significant design change that could have given him a competitive edge with key clients.

In contrast, a cartridge super 8 film-display system not only stands out in the salesman's incoming mail, but also provides permanent protection for the film message inside. And did you realize that you can mail 3½ minutes of super 8 film (that's 3,600 color pictures!) for 18 cents?

The potential for super 8 film is also emerging in another area: effective field reporting. One example that comes immediately to mind is the continuing search by the major oil companies to find and option land for service stations in key locations—for future development 5, 10, even 20 years from now. With disturbing frequency, however, management has discovered that a field reporter's glowing description of "gently rolling countryside" is, in

actuality, a parcel of wildly rugged terrain, unsuitable for the company's use. Now, the field men are being equipped with simple, easy-to-use super 8 movie cameras. They photograph a prospective site from every angle and then mail this objective, pictorial report back to the home office.

Food company values

The same approach is proving valuable for food companies, and others, who find they can best assess the impact of the retail display of the competitor's new packaging through the panorama of super 8 film, shot on-location. (In contrast to the field rep's three-page, hastily written memo, plus one sample, slightly crushed, of a torn-off label.) Similarly, a store manager's ingenious use of a company's own promotion materials, captured on super 8 film, can be reproduced and sent out to all the non-competing territories for the firm's salesmen to view and then to show to their own local retailers.

Clearly, the super 8 film production-and-display system holds tremendous promise in meeting business communications needs, whether a company has its own in-plant motion-picture capability or hires a professional outside production service. A businessman can get started today in film with a silent super 8 camera that costs under \$30 and shoot good, color, motion pictures. He can put together a basic production and sound recording system in super 8 for under \$700, especially if only one or two prints of the finished film are required. (Basic equipment might include Kodak's Instamatic Sound 8 projector and one of a long list of cameras.) For multiple release prints, a super 8 camera film can be enlarged to 16mm with fine results—and the 16mm prints run off in unlimited quantities. By the same token, a motion picture shot on 16mm can be reduced to super 8 if a company wants one or two prints to mail out to regional offices at minimum cost.

And it's compatible

The point is that while 16mm will remain the universal standard for film in the foreseeable future, the building blocks for super 8 film production are compatible with those of 16mm.

In fact, you may be pleasantly surprised at the many things that film can do for you . . . like the travel company that consulted with us and is now planning to equip more than 1,100 local agencies with projectors and a growing super 8 film library. The objective: to *show* prospective travelers a mini-film of a safari in Africa, or a gondola trip through Venice, or surfing in Miami Beach—you name it. As we have said before: Film *is* the nearest thing to being there and can many times be much more exciting.

Closed circuit use

Another novel approach will begin soon with several major hotel chains that have their own closed-circuit TV system in each room. Instead of the usual dog-eared brochure on the bureau, they will offer guests a visual preview of attractions in the city *and* in the hotel itself by means of a continuous-running super 8 film on a designated TV channel.

On the drawing boards, too, are film-display systems that allow the viewer to record his question or request, right on the film sound track, which is engineered so that there's no chance of erasing the company's prepared narration. There's also the existence of "the little black box" that attaches to the home TV set and enables the owner to drop in cartridge super 8 films and see them on his TV screen. In fact, a prototype model has already been introduced in Europe. That same cartridge of film, incidentally, can also be projected onto a large wall screen, offering the viewer almost unlimited display possibilities. And there's even talk of "disposable" super 8 film, mailed as a direct sales promotion to the householders in an area to introduce a new product or service—much as product samples arrive in the mailbox today at your home and business.

Potential unlimited

Exciting, isn't it? And I've given you just a glimpse of what lies ahead when we speak of the potential of super 8 film in every aspect of business operations.

You have a new and powerful tool at your command—and what your company does with film in the future is limited *only* by your imagination and enthusiasm.

Super 8 Spans the Seventies

Standardization still not set. Wide diversity
fits many A-V needs

Vidicom 8 "Private Eye" or Rheem 4600 weighs 2 lbs. and provide up to 4½ minutes of sound film. Continuous loop cartridge snaps into unit.

The A. B. Dick Model 60 offers up to five minutes of sound film with stop action and earphones. Projector weighs 11 lbs.

Bohn-Benton attaché case projector weighs 17 lbs. and will rear project up to 20 min. of continuous loop magnetic (125 A) sound film.

Fairchild Seventy-21 holds RCS MODULE System operates up to 30 minutes with continuous loop magnetic (18 cartridge film and sound A) film. It has a 9 x 12 in. tape rear screen and converts for front use. The unit weighs 17 lbs. and is 16½ x 14 x 7 in. when closed.

Jayark projector holds up to 30 minutes of continuous loop magnetic sound (38 frame retard) film and projects on pop-up rear screen. Unit weighs 20 lbs. and features 9 x 12 in. screen.

Technicolor Model 1300 offers 29 minutes of projection in continuous loop film. It weighs 29 lbs., has a 7 x 9¼ in. screen and has an 11 min. cartridge.

Confusion, debate, claims and counter-claims continue to surround the Super 8 arena. Despite the controversy still nagging it in terms of standardization and replication, Super 8 has come a long way since its inception just over six years ago.

Since Fairchild introduced the first continuous 8mm loop cartridge concept in the early 1960's, the idea of high-quality, low cost systems have mushroomed in the educational and industrial areas. And since Kodak's introduction of Super 8 in 1965, the variety of hardware to hit the market has become staggering.

Technicolor, which produced the first fully automatic cartridge (silent) in 1961, was quick to adopt Super 8 and in 1966 became the first company to produce Super 8, optical sound cartridges. 1967 brought one new silent and four new sound cartridge systems (Cameca, MPO and Fairchild with two were the sound systems). In 1969, Jayark and Bohn-Benton introduced their systems. The problem was that each was different, none of the cartridges were interchangeable and the sound tracks were entirely different, thus requiring a certain projector for a certain film or cartridge.

The incompatibility problem persists to this day, although there have been significant efforts at standardization. SMPTE and the American National Standards Institute have accepted the plus 18 frame for magnetic sound and 22 frame advance for optical. Two important developments foretold the adoption of these standards. One was the 1968 agreement by European manufacturers on the Easy Play cassette system which led directly to the development of the Braun silent Super 8 cassette and the Bolex silent Super 8 cassette system. The other was the announcement in late 1969 of the Kodak-Fairchild-Eumig projectors which featured a compatible and interchangeable cartridge.

As for now and the future of Super 8, particularly in industrial usages, it depends on who you talk to. One person told us he thinks the big surge will come only after the battle

Left: MPO Videotronic projects up to 15 minutes of continuous loop magnetic sound film. Projector weighs 18 lbs.

between Kodak and Bell & Howell is decided. Some people say the manufacturers couldn't keep up with market demands. Others say the manufacturers have been too concerned with establishing a place for their product with no concern to the needs of the market and users.

Throughout, however, the development and introduction of new and varied products has not ceased, or even diminished. While the consumer market has never taken strongly to the Super 8 systems as hoped, the business and industrial user has been wooed with an ever greater variety of systems. Most feel that the consumer potential never materialized because of the lack of a standard and the cost of prints.

Production

Along with the rise in Super 8 projection systems came several new Super 8 cameras offering a surprisingly high degree of sophistication at a relatively modest cost. Notable among these from a professional use point of view are the Beaulieu 4008ZM, the Fujica Z-600, the Bauer C-Royal, the Bell & Howell Canon, Nizo time lapse cameras, and more recently the Bell & Howell Filmsound and the Synchronex systems which permit sound filming via the use of a recorder which connects to the camera to provide the sound track. There are a couple of commercial production companies now which shoot original footage in Super 8 for specific jobs, although it is still more common to shoot in 16mm and reduce to the Super 8 format. Those who have done it report that it is preferable to use a higher than usual proportion of close and medium close scenes when shooting in Super 8.

Excellent results are now being obtained when copies are made from the original Kodachrome II film. Although, there may be some color variations which would not be acceptable for release prints. If necessary, an internegative can be made from the Kodachrome II in order to obtain release prints on positive dupe stock. The best performance and longest film life cycle is ob-

tained with positive dupe stock in preference to reversal stock.

Summary

In the final analysis it must be said that the standardization problems of Super 8 have hampered but not curtailed its growth and development. In fact, it may be this very thing that has led to the diversity of systems now available, each tailored to different needs and applications. Hand-held models at less than \$100 have brought the single concept idea to reality in just the past year. Each Super 8 cartridge, cassette or reel-to-reel system presently available has its own unique characteristics and therefore, applications. It thus is up to the individual user to determine which best suits his needs and plan to use it accordingly, foregoing the thought of universality of his presentation.

It is important for the potential user to remember only a few basic points:

—Sound systems vary (even among magnetic systems) and you must consider the ultimate use. Note: Labs now report that the magnetic plus 18 sound advance is accepted internationally in that the majority of their sound work going overseas is in that format.

—Silent and sound Super 8 projectors operate at different speeds, so if you anticipate sound films, be alert to the fact that the film runs at different speeds.

—Reel-to-reel cassettes offer the advantage of easy access to the film for repairs, while

—Enclosed (endless loop) cartridges keep the film cleaner and there is no need for rewind or a projectionist.

—Each system has its own particular maximum film length. Be sure the one you select will handle the needs you want it to.

If and until all manufacturers begin making compatible equipment to an internationally accepted standard, the user will have to make his selection of equipment from what is available that best suits his needs. And, there is a very broad and diverse selection of equipment presently available from which to choose.

Bolex Multimatic projects as many as six 50-foot cartridges consecutively. Automatic rewind with end of film never leaves cartridge.

Eumig Mark 510D uses cartridges fully interchangeable with Kodak and Fairchild projectors.

Kodak Ektagraphic 120 of several Kodak projectors features cartridge interchangeability with Fairchild and Eumig equipment.

Bell & Howell cartridge projectors use Auto 8 cassettes of conventional reels up to 400 ft.

To shoot this man and his family
for NBC, Gerry Feil and his
crew walked for six weeks through
the jungles of New Guinea.
Temperatures as high as 110. Annual
rainfall 200 inches. EF film.
Humidity had made the EF emulsion
so sticky that Cinelab had to
unwind the film rolls by hand. But
Mr. Feil exposed 50,000 feet
of film without losing a single frame.
His camera was an Eclair NPR.

Six weeks into New Guinea's un-
mapped rain forest, Cameraman-Director
Gerry Feil and his crew found what they were
looking for: a village whose inhabitants had
never seen a white man and whose style of
living was unaltered since the Stone Age.
Nobody knew how the villagers would react,
but it was obvious that, whatever they did,
they would do it only once. No retakes. No
waiting for jams or threading film.

The footage was for a 60 minute
NBC TV Special called "Patrol Into The Un-
known," produced by Capital Cities Broad-
casting; and this unrepeatable moment was
to be the climax of the film. Amazingly, the
villagers appeared neither terrified nor hos-
tile as the film crew walked toward them,
shooting sync sound as they approached.
Later, it became apparent that the villagers
were reassured by the presence in the film
crew of a woman — Mrs. Feil.

They weren't afraid; but they cer-
tainly were curious. Never having seen a
camera before, they were quite unselfcon-
scious about being filmed by the silent,
running NPR. But later in the day, when
Mr. Feil tried to get some candid non-sync
footage with his backup camera, its whirring
motor instantly caused everyone to freeze
and stare at the lens.

Since it was impractical to carry
more than one filmstock, Mr. Feil decided to
use high-speed EF film throughout, relying
on the NPR's variable shutter to cut down
exposure where the light was bright. EF
emulsion is relatively thick, and it tends to
swell and soften in hot weather; but Mr. Feil
had used it for the ABC TV Special on Africa
with no problems, despite the equatorial
heat encountered there.

Mr. Feil reports that the NPR's un-
obtrusiveness, together with its five-second
magazine change, made it the only camera
usable at the village, for both sync sound
and wild footage. "If the NPR had not sur-
vived its battering en route, or if the fan-
tastic heat and humidity had made the EF
emulsion jam the NPR, it would have been
a disaster," says Mr. Feil. But nothing went
wrong. Back in New York, Cinelab had to
load the exposed film by hand into the pro-
cessing machines. But the footage was per-
fectly OK — and fascinating; and historic.

Jamison Handy— Founder of Business Audiovisuals

In the conclusion of his interview with BUSINESS SCREEN, Jamison Handy explains his company's operating philosophies and it's formula for longevity in the A-V market.

Editor's Note: This is the second and concluding part of an interview with Jamison Handy which began last month.

We asked Handy how it was that the company he founded more than a half century ago has lasted so long and has constantly renewed itself so successfully.

"In the first place, we started out with a very broad, basic objective. Frankly, we had a social service bent, particularly to improve customer relations in business throughout the United States and to improve employee relations. It was a rather bumptious or presumptuous thing for us to undertake, but there certainly was a great need because we were still at that time in the Dark Ages to some extent.

"Insofar as employee relations are concerned, we were only a couple of decades out of shooting incidents and the use of machine guns turned on workers who refused to work—as in the Haymarket riots—a general national practice of 'Let the buyer beware'—'Caveat emptor'—neither of which seemed to be very good ideas. There were evidently things that needed fixing and in my long protracted adolescence, which was lasting into my twenties and still

lasts, doing something about this seemed a sensible life time objective, as well as a useful way to serve.

As our business progressed we were able to learn a great deal from the companies we served: the Harvester Company, H. J. Heinz, Delco-Light, Hart Schaffner & Marx, Standard Oil Co. of Indiana, Union Oil Co., Etc. This set up a new pattern in our operation for transferring from one successful company to another what we had learned that they could use, but never to any clients' competitors. When we take ideas we get from the experience of successful people, we don't simply superimpose them on another customer or client. We first penetrate very deeply our customer's business so that we know what the attitudes are at every level of that business from top management down to the customers. We know what the customer's field situations are, not what he has been told they are, but what they really are, so we can counsel objectively and candidly on the facts of life in that operation. That has continued because, just as we in The Jam Handy Organization are basically interested in the application of practical cost-cutting idealism in customer relations, employee relations and service relations, just so we are still interested

Jamison Handy...

in dissemination of good ideas and cross-fertilization. We aren't just delivering films or non-projected visuals.

"There was another factor, I would say. Our clients lead. We've made a practice of associating ourselves with leaders and helping them improve their lead position—or of serving people who have been worthy of leadership because of the service their product renders, because of the manner in which they deliver that product or service, because of the quality standards which they have set for themselves and have sought to maintain. Generally speaking, we have worked only for those who are leaders or who had some qualifications for leadership or wanted to stay leaders if they were already leaders, and that's been a help in making us long lasting.

"In The Jam Handy Organization we say we never do anything. All we do is help. We will do anywhere from 1% to 99% of the job, according to where our client wants us to begin and where he wants us to leave

off. There are wide differences of preference of that kind to which we are glad to adapt ourselves. I think that this flexibility has been quite a factor in keeping us in business over fifty years. Adaptability leads to a long life.

"Here's another factor that I think has given us some longevity and freshness and enabled us to keep pace with the fast development in the United States in business. I mean development not only in size but expansion in diversity of products and branching into new channels of trade. That is a fact that a lot of the innovative character of the businesses we've been associated with—introducing new things in this continually fast-changing world—had rubbed onto us. I'm speaking particularly of our readiness to change and the ability to keep in pace with their changes and developments as they have occurred—not only meet them on terms of equal enthusiasm for new things needed, but also in terms of innovations to help accomplish the new objectives and help introduce the new products and the improvements in those products from time to time.

"Of course, our young men who are carrying on are deep-dyed with the principles which govern our operations and particularly with our policies of innovation and meeting change with change. New times and new problems call for new approaches and new techniques. Everything moves faster these days, and don't we know it!

"Our clients have always had new styles, new methods and new improvements and they need fresh ways of doing new things. We have deliberately associated ourselves with innovative people. Living with these associations, we ourselves have been stimulated to introduce our own new techniques. That's how we came to go from simple devices like the flip-chart, in many forms, to 'rack sliders', making them larger, better and simpler and easier, new methods of projection, new processes in films and new departures in multi-media methods of our own origination for expositions and conventions and meetings of every character at every echelon.

"I would say that above all, perhaps, the thing that has kept us alive and kept our relationships with our customers alive through many years

with them, has been our ability to sit with them on terms of equality of understanding, of the need to get the maximum dollar value out of every dollar they spend on meetings and the implementation of meetings.

"It's been our practice to compete with our customer's department heads in the efficient expenditure of their budgets and get them more for their dollar. We strive even to excel, if only by virtue of our zeal for getting the results they need.

"We also save their time by keeping on a basis of at least equality of knowledge of what's happening out in the field as a result of their activities and being able to sit down with them and give them in some cases a quicker and more candid appraisal of just what the experience is out in the field with the instructional or stimulative meetings which we help design—what the reactions are—and then to come back with ideas for how to make the next one

better," he stated.

"A lot of the maxims that our customers have—the people we work with—have rubbed off on us and are *our* standards and *our* ideals—probably none better than 'Putting *you* first keeps *us* first'—the current slogan of Chevrolet for customer relations.

"These are in my opinion the causes of our business longevity; One, an underlying objective of social service, improving selling relationships and employment relationships, while multiplying the distribution of the conveniences and necessities of living.

"Two, a dedication to helping our clients accomplish their objectives by more lucid, emphatic communications in meetings at every level.

"Three, constant dissemination and transfer of successful ideas from one area of activity to another.

"Four, loyalty to our clients and to their leadership.

"Five, continuous innovations to meet change with sound change, and with the vision of the forward look.

"You have asked what the future holds for the business screen . . .

"It may well be filled with opportunities in what might be called an audio-visual after-market. The 'after-market' is the market that exists throughout business and industry, represented by companies large and small, who share common communication problems and who can be served most effectively and most economically by adaptations of materials by us after we have developed original specifics.

"We have observed that the com-

munication and training needs of business enterprises are alike, although quite different . . . with requirements that parallel those of other enterprises also active in the areas of engineering manufacturing, marketing and management. Whatever the load to be transported, you frequently find that the chassis and power train can be basically one . . . the body may differ but the bone structure is the same.

"Many of our people have had the experience of working on a project and realizing that it represents a universal problem—that properly adapted it could be made to fit any business. Through adaptation, we retain the basic universal idea used in the original, renew or subdue the specifics and come out with a new product for *all* business.

"The projects we adapt in this way—and we are already working on some—have whole new packages built around them. These low cost packages can be used broadly for the general market and they can also be worked into programs we solicit from selected prospects. They can be readapted—to bring them back to the specific, with the customer's own identity, for example, if that's what he wants.

"We need a constantly improved screening of what the dropped out experiences of others can teach us; and, above all, of how much progress there is to be made that hasn't been made. We have only a bridgehead on what needs to be done. Trainees need to get controlled behavior, controlled emotions and improved attitudes in this country. We need new presentations of old motivations when trainees are considered untrainable—and all of us are, to a certain extent.

"The future of this business lies in accepting and meeting these challenges on the mental screen of every person. Every progressive businessman is introducing or substituting the image which he needs—the customer needs—I'm talking about the customer's customer—needs for his own good, presented in terms of his own understanding with a minimum strain on his mentality, his credulity and his pocketbook.

"Well, that's about it. What's the future from here? It's more and better of the same thing. We know we've only "touched the hem of the garment."

Always an expert swimmer, Jamison Handy, now in his 80's still swims regularly and enjoys water sports.

Single Concept Comes of Age

The introduction of economical small-cartridge projectors like the "Private Eye" is bringing the long sought, needed single concept film idea to reality.

By CHARLES (CAP) PALMER
Executive Producer Parthenon Pictures

Extremely economical projectors like the Vidicom 8 "Private Eye" are bringing short, segmented single concept films to users on a highly personal and individualized basis.

Whenever an industrial trainer or a sales manager picks up a cordless "Private Eye" type sound-movie projector for the first time, usually he loves it . . . "At last, a movie theater you can hold in your hand, and for a cost amounting to peanuts." But then he often walks right into a common trap—"Boy! If only you could stretch that cartridge longer than five minutes!"

Well, we can, in practical effect. For one thing we can give him a set of several 5-minute cartridges, "chapter" films, which he can snap instantly from one to the other at natural subject breaks. In another approach, we can give him silent filmstrip sequences of his diagrams, maps, flow-charts, lists, spliced between the relevant segments of his sound movie. The viewer can hold these for ten seconds or ten minutes, thus packing several *hours* of real-time instruction into that so-called "five minute" cartridge.

"But," says he, "our movies always run 20 or 30 minutes."

Right. They do, and they always have.

But why?

Because to show a 16mm movie, the sales manager has had to locate a projector, find someone who knows how to thread and operate it, reserve a room he can darken, and make miscellaneous other preparations. Having gone to all this trouble, he can't show just two or three minutes of film to one waitress or mechanic or office worker; he has to make the effort worthwhile by gathering a larger audience. They, in turn have gone to their own trouble to gather to make it worth their while. Thus two or three, or five minutes of gut content must be pepped up with entertainment.

True, an occasional film subject does need length. Such films may be an aggregation of many facts (such as a travelogue) an attempt to change an attitude, (regarding drug abuse for example) to persuade (urging pollution control) or to explain something really complex, (as an illustration Gross National Product). Complex subjects like these generally need longer running time to be explained properly; and films about them are usually directed toward sizeable audiences. The showing environment under these circumstances encourages length, and the residual to be left by the film is a

general impression.

But when the industrial trainer- or salesmanager picked up that little hand-held projector, he was thinking about concrete objectives: to train, to sell, to teach. His job is to impart a specific understanding of a "hard" skill or method, or an operation, or a hands-on product advantage. As differentiated from absorbing an impression, the trainee or prospect or student must understand and memorize. The challenge to the viewer in this case is not so much a matter of concentration but of remembering. What is mentally taxing—is the "takeaway" load of hard material which the viewer is adding to his mental stock.

Granted the maxim that a picture—the *right* picture—is worth many words, a 20-minute sound film may deliver the equivalent of two or three hours of platform lecture. However, when the subject requires the viewer to remember and act upon concrete action and facts, the long film is trying to teach a full semester course in a single long lecture. No teacher would dream of doing this. Teaching has always been done in *increments*. Lessons must be presented one at a time in doses small enough for the recipient to assimilate.

So why have A-V people always constructed our films in "semester" lengths? Because, to repeat, the cost and clutter of conventional 16mm film presentation has limited the number of times we could get our group audiences off their jobs (or off their apathies) into our showing situation. If we're going to have only one crack at prospects, we are compelled to throw the book at them, and hope that some of it stays put.

Here is a piece of personal scar-tissue.

In a training film which my company made for telephone information operators, there was a motivational theme. The body of the content was a progression of twenty "problem" calls, in each of which the caller's situation and the operators' correct procedure was demonstrated. The situations were interesting, the actors were cute and smart, and for its secondary use of public relations showings the film created a favorable impression for the company. But our primary objective was to instruct the trainees in the correct

procedures for handling each of these twenty problem calls. Here we fell on our faces. The trainees would watch the first call, get the message, and channel it into their functional memories. They would watch the second call, ditto. But at the third or fourth call, even the brightest class member was trying to remember the preceding techniques while trying to acquire the new detailed instruction. By the twentieth call the result actually had become negative, with potentially happy operators now frustrated and confused.

It should be emphatically noted that at the time this film was made the sound-cartridge "personal projectors" did not exist, and we were compelled to go the 16mm one semester lecture route.

If we were to produce a *Now* version of this same subject material, we would break the twenty calls into a package of 5-minute cartridges. We would still be inviting confusion, however if we simply put scissors through the existing film at 5-minute intervals. We should rearrange the individual calls into clusters of four or five thematically related problems. Cartridge C might cover the deaf person, the person who speaks broken English, the slow thinker, the short-fused abuser, and the drunk. These callers all are alike in terms of basic problem and approach; each caller is "difficult," and each can be serviced by patience, and ingenuity in re-phrasing one's questions. With this short-film format, the trainees would study only one cartridge "lesson" per session, and after a participatory discussion (and hopefully an invaluable re-running of the short film) would leave with the *total* instruction now embedded in their functional knowledge inventory. And since there had been no complicated projection and screen set-up to arrange, probably three or four trainees at a time had walked only a few yards from their operating positions to the supervisor's desk, or the practice room.

In fact, one of the great advantages of this 5-minute format (and the new mini-projectors which make it feasible) is that it brings the training to the trainee, with a complete flexibility of choice as to time and place. On many subjects, properly structured software, built on the Triascope system, enables completely independent self-training,

and eliminates need for an instructor or class. Accessible in blocks of time; permitting the trainee to progress at his own pace, they are inexpensive enough to integrate into existing courses or training situations without strain.

Free from clutter of the threaded projector and the darkened room, and with visual-audio now as handily available as a book, the trainer can make short bits of film into a pamphlet-size lesson. He can use film strips to visualize the occasional point which needs live-action or animated illustration—the cartridges which come with a Home Study course often contain "segmented loops," instead of the conventional beginning-to-end non-stop film presentation. The reel contains several separated segments of a few seconds or a couple minutes duration, gleaned from the text or slide-film as needed to carry the progression forward. The short-film content will be utterly (and newly) simple, direct, and *visual*.

People have a perpetual tendency to jump off the cliff of the *Either/Or* prognostication. At the turn of the century the phonograph was going to drive out live music. Later radio was going to knock off the phonograph. Still later television was going to destroy movies. Today we have predictions that Super-8 will replace 16mm, and who knows what will become of us with the advent of the video cassette. All of the doomed media are prospering. In the next few years, it is my opinion we will see more 16mm releases, rather than fewer, to accomplish those large-group assignments of persuading and inspiring. In fact, the increased exposure of executives to the powers of audio-visual as a result of their vastly expanded use of the medium in the new 8mm cartridge-loaded self-screen projectors, will give executives a realization of the power of film. In all probability this awareness will result in an actual increase in their usage of the 16mm type productions.

But for certain vital aspects of communication, particularly individualized learning on an independent self-controlled basis, the 5-minute cartridge sound film promises to break through the traditional A-V barriers of cost and clutter to open up whole new worlds of effective communication.

Lots of people have great ideas.

We have one you can afford.

Take a pocket-size cartridge with up to half an hour of MotionStrip™ pictures and sound together—and a format fit for every producer.

Add a portable projector—with its own TV-size screen—that also provides wall-size images, operates fully automatically, or stops whenever you want it to.

What you have now is the RCS MODULE System. The most compact sound/film cartridge you can find. Anywhere.

And that's *our* great idea.

Well, perhaps not entirely ours. Some of its features have existed for years, scattered among many different systems—so many, in fact, that few people could make full use of audio/visuals.

But we've put it all together. And we've done it so very skillfully that we can sell it at half the price of any comparable system.

Any library of materials can be converted to our cartridge

format. Already, RCS has gathered rights to the largest sound/film library in the world.

In education, the low cost, efficiency and versatility of the RCS MODULE System make it suitable for individual use, for large group instruction in classrooms, for teaching crafts and hobbies, and for pre-school and adult education in the home.

In business and industry, our system is ideal for sales presentations, for displays in retail locations and at trade shows, for employee training and recruitment programs.

Ideal, yes. And ideally priced.

After all, what's so great about a great idea if nobody can afford to use it?

the rcs module system[™]

Film Chain Adaptor Transfers 8, 16mm Film, 35mm Slides

The model VCR-1 color film chain adaptor provides a simple, practical means of projecting motion picture and slide images into the Sony DXC-5000 color video camera for transfer to video tape.

The VCR-1 can be operated with most 35mm slide projectors as well as most 8 and 16mm motion picture projectors and has a separate telop input for 4" X 5" title cards. Because the color camera can be mounted on the film chain adaptor in seconds, it can easily double as studio camera and film chain camera with no modification. *Sony Corporation of America.*

IFPA JOURNAL

an official publication of
INFORMATION FILM PRODUCERS OF AMERICA, INC.
P.O. Box 1470, Hollywood, California 90028

R. B. Montague, President

I think the most important announcement I can make at this time is that IFPA can this coming year, realize its full potential in real service to its members and to

our profession. How come I say this now and not last year—last year when we stressed new members, new chapters, an increase in dues, higher film competition fees, book sales, advertising rate increases, film rentals—anything to make a buck?

I feel it's almost immoral for a professional Society to prostitute its high ethical and intellectual position by placing so much importance on commercial efforts, and alliances with fund raisers.

But 1970 was a year of decision. I knew full well what was ahead for me and the National Board when I agreed to become your president. The gamble was *this*, and the decision was *this*:

Could IFPA recover from a seemingly impossible financial abyss? And should I step in at this time, at the helm of a floundering ship, and could this administration dedicate itself to a year of personal sacrifice and such severe austere operations as to our personal, family, and professional life? In January, the apparent task was even more appalling than we thought it could be. We had one immediate resignation. Three months later, we lost another board member, but only after we had initiated the format for a financial recovery if the plans for the next 14 months could be realized in full. We set high goals, and objectives. We organized and delegated. We were austere and with hats in hand, asked much of others and ourselves. Your president asked for special powers and lots of faith. Our National Board members set personal goals and we achieved the most important ones.

I can state now, that although IFPA is not in the most ideal position financially, we *are in the black*, we *are solvent*, and we have had a *good year*, especially when you consider the economy and world affairs.

Now, perhaps, with this base to build on, IFPA can actualize and realize its full potential.

Here are a few of the things we hope to achieve in 1971.

1. We *must* continue to grow in membership.
2. New members-at-large should have the fellowship and opportunities of programs and exchange of ideas available through additional local chapters.
3. Continued practice of Regional Board Meetings and Seminars.
4. Expanded National Conferences, both EAST and WEST.
5. Published Papers, Speeches, and Proceedings of all Conferences.
6. Packaged Programs available for Chapter Meetings from the National Level.
7. A strong National/Chapter team relationship in areas of Program, Membership, Finance, Promotion, and Administration.
8. Better communications and understandings.
9. Expanded Scholarship and Apprentice Program.
10. A Public Relations program to build our National Image and increase Management Awareness of the potentials of audio visual communication in non-theatrical areas.
11. Alliances with other professional groups with like goals and objectives.
12. Establish a working placement service for those looking for qualified applicants, and members seeking employment or relocation.

We've met the "Challenge" of 1970, and now we can "Change" into what a National Board of Directors and Governors should be—a guiding body with long range plans, improved man-

agement and operating procedures, increased membership service, and implementation of the resources of talent, manpower, experience and information available.

Instead of special powers, this year I shall ask for volunteers and make certain that 1972 will be an even better year with continuity from the present administration.

Get behind your new officers at chapter level and demand better programs, a local seminar, and at least one social dinner meeting this year. Your chapter's Vice President will assist you—he's part of your team—use him. Good programs and proper funding will insure your successful operation this year.

We, as communicators will try hard to make this a year of communication. We have many ideas to share with you, and that's what IFPA is all about.

Others Look to IFPA

For years now, many associations and societies have looked to IFPA and its members for advise, assistance, and support in their endeavors that involve film and audio visual mediums.

IFPA has provided coordinators and juries for Wescon Science Theatres in both Los Angeles and San Francisco for the past several years.

In December, Sunset Magazine, through Ralph Hall Productions, enlisted the aid of the San Diego Chapter Members, along with Modern Talking Pictures and Hennessy Productions to judge their Third Annual Travel Film Festival.

San Diego Chapters categories were 1) "Commercial Travel" and 2) "Outdoor Sports" and involved two evenings. The film competition was held in conjunction with the Southern California Sports and Vacation Show, January 2nd through 10th at the Anaheim Convention Center across from Disneyland. The Awards Banquet was on the evening of January 6, 1971.

An outstanding contribution by IFPA this year will be providing the complete program of films for the

General Dynamics graduates flew to Waco, Texas in Convair 440 Metroliner to receive degrees in Business Technology. IFPA President Bob Montague is seen waving from doorway.

"Award Winning Film Theatre" at Photo Expo '71 in Chicago during the entire run of the show, the largest ever operated on this continent. The films will be selected from the winners of the most recent "Cindy" competition held at the 11th Annual National Conference of IFPA at Newport Beach, California in November 1970.

Dr. Frank Baxter Keynotes LA Installation Dinner

The Waterfall Room in the Sportman's Lodge was the location for the Los Angeles Chapters Installation Dinner, Friday, January 19, 1971.

In attendance were outgoing and incoming chapter officers, and several National Board officers including President Bob Montague and wife Elli, Vice President Mike Rye with wife Pat, Chapters Vice President Jack West with wife Molly, and Financial Vice President Lutz Winkler.

Incoming Chairman George Kent was prevailed upon to sing and accompany himself on the guitar. Speeches were at a minimum, and the music of a rock group "The Seeds" made the room "shake, rattle, and roll."

Miniature directors chairs were awarded to officers, old and new, and a special "Resolution of Appreciation" was presented to the featured speaker of the evening Dr. Frank Baxter, for his work in Frank Capra's *Homo The Magnificent*.

Dr. Baxter, Professor Emeritus of English at USC, is, perhaps, better known as a television personality. His breakfast time television broadcasts popularized Shakespeare for thousands. He appeared on a number of prime time network science programs

and many TV documentaries. Dr. Baxter's humorous approach to his subject matter makes his programs entertaining as well as instructional.

There was a Presentation of Plaques to two new Sustaining Members. Technicolor-Commercial & Educational Division was represented by Mrs. Terry Cervantes. The other new member is Newfilm Laboratory, Inc., Lampert Levy, president.

Another pleasant surprise was the table laden with donated door prizes which included two Super 8mm Projectors, many film cassettes, a clock-radio, directors finder, and so many other "goodies" that almost everyone

went home with a gift and reminder of a wonderful evening.

Monty Graduates

Bob Montague, IFPA national president, and Chief of Motion Pictures and Television for General Dynamics has, after a 30 year gap in his college education, finally graduated!

A drop-out from San Diego State College Liberal Arts Course in 1941, Monty was voluntarily drafted into the Navy as a Combat Cameraman. Down through the years he picked up units from evening college and University of California at San Diego. Then in early 1970, the opportunity to "tie a ribbon" around units accumulated by attending a concentrated program was offered in San Diego by Texas State Technical Institute, with its main facility on Connell Campus in Waco, Texas. A miniature campus was established in San Diego with an adjunct Vice President, a dean of registration, and six professors. By December, 36 managers and executives of the Convair Aerospace Division of General Dynamics had passed all their examinations and requirements for a Baccalaureate Degree in Business Technology. They flew in a company plane, with wives and professors to Waco for graduation ceremonies and diploma presentations. All graduates were made Honorary Texans by the Governors delegate Tom Truman, nephew of former President Harry S. Truman, and all wore western outfits including boots and white hats. Several, including your IFPA President, are already enrolled in graduate programs.

SUSTAINING MEMBERS OF IFPA

In the next issue, we will feature one of our sustaining members on this, their page. The story will be non-commercial and tell of the company's background, services, and latest innovation or product line. Sustaining members are:

The Viewlex Super 1600 stands out!

In less than one minute you can see why the Viewlex Super 1600 stands out above any other 16mm Sound Projector—because that's all the time it takes to put the show on the screen.

Swing the reel arms into position—They flip-up with one hand.

Thread it up—The unique safe threader zips the film leader through the entire film path automatically . . . and the threader never touches the film. Fast, safe!

Start it—A single function switch controls all projection operations, forward and reverse, and energizes the sound system. Easy, effective!

Look at the picture—The new Tungsten-Halogen light source delivers a brighter, sharper, color-true screen image. Never dims, lasts longer!

Want to hold a frame on the screen? Stop-on-frame switch lets you lock-in a single picture whenever you wish, and for as long as you wish.

Listen to the sound—Lifelike, room filling sound . . . the instant you turn on the switch.

And there's lots more too! Take a close-up inspection of the Super 1600. You'll find it offers the same craftsmanship and solid quality that distinguishes the entire stand-out world of A-V products by Viewlex.

For a free brochure or no-obligation demonstration write Viewlex, Inc., Holbrook, N. Y. 11741. Dept. 5

circle 112 on reader service card

Read about our fight against film pollution in Sixteen and Eight.

Dirt can ruin a film

And our business is printing and processing 8mm, Super 8mm and 16mm for motion picture release prints.

That's why we've put a highly sophisticated air-control system in our printing and processing rooms, cartridge loading room, and every room where your film is exposed to air.

In this laminar flow system, air comes from thousands of tiny holes

in the ceiling. It forces dirt and dust particles down to the floor level and out the exhaust exits.

That's why we've recently installed a unique pre-coat water filtration system in our processing department.

Unique because this system filters water to one-millionth of a meter. Result: Incredibly pure water.

Dirt.

We won't let it pollute your films.

HELP WANTED

SALES REPRESENTATIVE MOTION PICTURE LABORATORY

We want a highly motivated young man to represent our Filmmakers' Labs Division. Generous incentive compensation plan is available to man willing to work 12-hour days. Your territory will include Detroit, the Midwest and the East Coast for all professional Super-8 and 16mm lab services with special emphasis on high volume Super 8 reduction printing. You will be backed by over one million dollars of the latest equipment, including Bell & Howell printers and Treise processors. Filmmakers' Labs can print, process and load thousands of prints in a matter of days with emphasis on speed and quality. Volume production orientation allows us to quote the lowest price in the industry for Super 8 reduction printing. If you qualify send your accomplishments to: T. James Herrmann, President, Omnicom Corp., 3315 South Pennsylvania Ave., Lansing, Mich 48910

CORRESPONDENCE—When replying to blind ads, use the Box Number and send your correspondence to **BUSINESS SCREEN, 1 East First Street, Duluth, Minnesota 55802.**

CLASSIFIED RATES—35¢ per word. Minimum charge \$10.00. Bold face type words or words in all capital letters are charged at 45¢ per word.

BOXED OR DISPLAY ADS—\$20.00 per column inch. One inch minimum.

BLIND BOX NUMBERS—For any classified ad having a blind box number, a service charge of \$5.00 will be made.

TERMS—Rates are net and not subject to agency discount. No cash discount is allowed. CLOSING DATE—10th of the month preceding the month of issue.

CORRESPONDENCE OR PHONE: Pauline Davies, Ad Production Dept., **BUSINESS SCREEN, 1 East First Street, Duluth, Minn. 55802, 218-727-8511.**

...we do it all!

THE NOVO FAMILY of FILM and TAPE SERVICES

The Novo group of film and tape divisions have been providing physical handling services for the motion picture and television industries since 1933. As the demands of these industries have increased, our services have expanded and now include—short and long-term storage—35mm and 16mm distribution—computerized inventory controls—print procurement and distribution of television commercials—super 8mm video cartridge loading—film repair and restoration.

When we say "we do it all" we mean it.

BONDED FILM STORAGE BONDED PARK FORT LEE, NEW JERSEY

- The largest film and tape storage facility in the world offering engineered environmental conditions required for the preservation of film, video tape, audio tape and computer tape.
- An underground storage facility is available in Hutchinson, Kansas which is conducive to long-range storage and where extraordinary security provisions are required. Temperature and humidity remains constant through natural stabilization.

BONDED 16mm DIV. 535 WEST 46th STREET NEW YORK CITY

- A complete "under-one-roof" facility for the distribution of 16mm film to the television and other non-theatrical industries.
Services include:
 - thorough inspection of all prints
 - storage
 - shipping and receiving for TV stations and other non-theatrical exhibitors

BONDED FILM DISTRIBUTORS BONDED PARK FORT LEE, NEW JERSEY

- Providing receiving, distribution and storage services for the 35mm theatrical industry in the metropolitan area.

INTERNATIONAL FILMTREAT 250 WEST 64th STREET NEW YORK CITY

- The largest film restoration organization in the world offering a unique chemical process for the rejuvenation of damaged film. Services include:
 - thorough inspection
 - repair of bad splices and tears
 - elimination of scratches, dirt, abrasions and other imperfections
 - full-coat lubrication for new film performance
 - final inspection

GARDEN STATE DIV. 630 NINTH AVENUE NEW YORK CITY

- A "total service" organization for advertising agencies and industry including:
 - print procurement
 - post production services and distribution of commercials to tv stations
 - storage, inspection and distribution of educational and industrial films
 - computerized inventory controls

AGF FILMS 6509 DE LONGPRE AVE. HOLLYWOOD, CALIFORNIA

- The largest and most modern facility for the cartridge loading of 8mm, super 8mm film, and video tape for all projection systems. Other services include:
 - print procurement
 - patented AUDIO LUBE process preserves, prevents costly damage and provides trouble-free operation of cartridge-loaded film
 - offices in NEW YORK, CHICAGO and LOS ANGELES

SMPTE CONVENTION SCHEDULE

Here's your chance to team up with a beautiful movie star.

When a movie goes on the road these days, it rarely travels alone. Very often, it takes along an interesting sponsored film. And it works out beautifully for both of them.

You see, the major feature film producers aren't turning out Selected Short Subjects like they used to. Which means the chance to have your company film shown as an Extra Added Attraction is greater than ever before.

Your film can be right up there on the same screen with the big ones. It could play over 3000 theatres a year. And reach some 6 million urban moviegoers.

All it takes is a call to Modern. We'll tell you how easy and inexpensive it is to book your film into theatres all over the country. (We've been doing it for years.)

Better still, ask AT&T, Humble Oil, Equitable Life, Anheuser-Busch, or The New York Stock Exchange. They're just a few of the companies that are now playing with the biggest stars in town.

MICHELLE BENDER

The somewhat bitter irony of the cobbler who lacks shoes for his own family has an unfortunate parallel in the film laboratory and services industry. Repeatedly, spokesmen contributing to this month's BUSINESS SCREEN Roundup Report on page 21 mentioned (along with other current problems) the lack of communication among themselves and their colleagues—all professional audio-visual communicators in the industry.

The reasons for this situation are diverse and vary from one area of the United States to another. Nevertheless, the most frequently suggested obstacle to effective inter-communication was the intensity of competition between labs.

Instances in which price cutting had taken place at the expense of quality were cited. Under these market conditions, even if restricted geographically, it is unlikely that industry cross-fertilization or mutual help will occur.

We believe this is unfortunate—both for the industry as a whole, and for those utilizing its services—because the need for more cooperative communication is so apparent. Several spokesmen expressed a desire to regularly discuss new equipment, processes, and general ways of economizing. One individual suggested the establishing of a credit clearing house among film processors for laboratory clients who want work done extra quickly, or for COD accounts. Another respondent described an informal arrangement already operative within his market area among film music distributing companies; they have united to “catch” music users who do not obtain proper licensing, or who disregard copyright limitations. He hoped for an expansion of this communication channel.

To what extent such communication should be encouraged is a difficult and subtle question. The nature of the information exchange and the purpose for which it is used must fall within an acceptable range, to avoid possible violations of anti-trust laws covering restriction of trade and price-fixing.

Despite this qualification, we believe that a more cooperative local spirit among film lab and services people, comparable to that of an informal trade association, is a worthwhile goal toward which to strive. Its achievement would be beneficial to the industry, and ultimately, to the customers it serves.

**XEROX knows image quality; so,
XEROX uses Da-Lite® Slide & Movie Screens!**

The world-famous Xerox Corporation is no copycat! Originally, they installed one Da-Lite Electrol® screen . . . then ordered four more, all permanently installed.

In addition, Xerox maintains a "fleet" of five portable Challenger® models! Duplication? No . . . just good business!

For full information about the

complete Da-Lite line of electrically operated, remote control screens, in sizes from 50" to 30' square, call or write Dept. BS. We'll send you all the facts you need, plus the name of your nearest qualified A.V. Dealer.

Summer Film Production Workshop In New York City

June 28 through July 31

An intensive five-week workshop in the practical and theoretical aspects of film production.

- Sessions include film production, film editing, sound for film, and script writing.
- Practical experience in all phases of motion picture production.
- Expert faculty selected from the film industry.
- Professional cameras and editing equipment and air-conditioned facilities.
- Special sessions with distinguished guest critics, filmmakers and producers.
- All materials, processing, and printing are provided.
- Special film showings and critique of student work.
- Certificate program.
- Limited enrollment.

For complete program information and a registration application telephone (212) 598-2373 or write Mr. Raymond Zelazny.

Feedback

Thank you for bringing out an idea in print that I have felt quite strongly about for some time. I only the United States manufacturers of equipment and hardware in the Super-8 projection field and in video cassettes would adopt specific standards for cartridge configuration, they would benefit, and so would the user.

With the availability of so many different systems and cartridge loading requirements per system on the market today, it is difficult for companies to move into this field, knowing that their methods and systems are not fully adaptable to each other . . . Why is it we all want to go our own way strictly for the sake of doing so?

I hope February's editorial stirred some thinking in the engineering and marketing organizations responsible for the production of this hardware and software to get together and adopt realistic standards for sound, size, and cartridge configuration in the emerging cassette field.

MARSHALL WAYNE
Director, Audio Visual
Department
Armour and Company

Just a note to thank you for the very nice write up you gave our "Video Tape Production & Communication Techniques" in Reference of the February issue of BUSINESS SCREEN.

BUSINESS SCREEN

109th SMPTE Technical Conference Program

From Sunday, April 25th to Friday April 30th, the Century Plaza Hotel in Los Angeles will be buzzing with the activities of the 109th Society of Motion Picture and Television Engineers Convention.

General areas of interest to be discussed will be sound recording and reproduction, television systems, motion picture systems, theater presentation and projection, and small format films.

Two of the many highlights of the technical conference and equipment exhibit will be sessions on television systems which 15 papers will be presented, and a two-day symposium on "Motion Picture Film and Videotape Color Production for Theatrical and Television Presentation."

Equipment will be exhibited throughout the conference until Thursday, April 29th, when the SMPTE Exhibit Award will be announced.

Information may be obtained and advance registration completed by writing to the Conference Manager, SMPTE, East 41st Street, New York, N.Y. 10017.

For our readers' convenience in planning their schedules, BUSINESS SCREEN has reprinted a complete schedule of events as it was available at presstime. ■

SUNDAY, APRIL 25

REGISTRATION—12:00 to 5:00 p.m.

MONDAY, APRIL 26

LABORATORY PRACTICES I—Morning (Concurrent)

Application of Solid-State Electronics and Stepping Motors to Optical Inter Drive Systems; Electronic Tools for the Optical Printing Laboratory; Shutter Calibration of Optical Soundheads; Video Pan-Scan System; A Review of Cordless Camera Drives; Continuous Reduction Printing and the Picture-Size Standards; A New Automatic Sensitometer.

PIE SECTION I, Session I—Morning (Concurrent)

Papers on cockpit displays and command-decision displays.

NET-TOGETHER LUNCHEON—Noon

Guest Speaker: To be announced.

PIE SECTION I, Session II—Afternoon (Concurrent)

Papers on specialized cathode-ray tube photography.

SMALL FORMAT FILMS—Afternoon (Concurrent)

Super 8 in the Teaching of Film Production; The 8mm "Personal Projectors"; A Super-16 System Developed to Maximum Benefits for Several Formats; A Survey of the Super-16 Format.

EXHIBIT OPEN HOUSE—Evening

TUESDAY, APRIL 27

LABORATORY PRACTICES II—Morning (Concurrent)

Continuous Operation of a Step Printing Process for Making Color Reversal Internegatives; A Photometric Probe for Measuring Exposure Level and Uniformity in Continuous Color Printers; Processed Film Lubrication; Measurement by Paper-Clip Friction Test and the Importance to Projection Life; Development History of a Precision Intermittent Film-Transport Mechanism Built Into the Aperture Plate of a 6-mm Camera; A Comparison of Silver Recovery Systems; A New Regeneration Method for Ferricyanide Bleaches; Report of the Xenon Hazards Meeting

PIE SECTION II, Session I—Morning (Concurrent)

Papers on computer display recording such as interactive displays and full color recording.

MOTION-PICTURE SYSTEMS—Afternoon (Concurrent)

One Reproduction—The Key to Film Quality; Color Temperature, Facts and Fiction; The Protection of Special Effects Electro-Explosive Devices from Premature Firing; A New Self-Blimped 35mm Production Camera.

PIE SECTION II, Session II—Afternoon (Concurrent)

Papers on specialized microfilm techniques, including computer animation recording

TELEVISION I—Afternoon (Concurrent)

Subjective Effects of Differential Gain and Differential Phase Distortion in NTSC Color Television Pictures; Subjective Effects of Delay Difference Between Luminance and Chrominance Information of the NTSC Color Television Signal; Image Unsteadiness in 16mm Film for Television; A Systems Approach to Linear Integrated Circuits for Color Television Facilities; A Telecine Facility for Film Systems Evaluation; Color Television Film Recording From a Shadow-Mask Picture Tube; Color Laser-Beam Recorder; Single-Line Pulse Distribution System; Spatial Feedback Techniques for the Alignment of Television Raster.

WEDNESDAY, APRIL 28

EQUIPMENT PAPERS AND DEMONSTRATIONS—Morning
TELEVISION II—Afternoon (Concurrent)

Electronic Editing With Videotape Recorders; Automatic VTR Program Editing System; High-Speed Duplication of Videotape; A History of Television Recording; The Automation of Small TV Stations; Network Utilization of Super-8 Newsfilm; World-Wide Television.

THEATER PRESENTATION AND PROJECTION—Afternoon (Concurrent)

Presentation of Motion Pictures in Theaters; The Front Projection Process of Composite Photography; Flicker Perception in Motion-Picture Projection.

SOUND—Afternoon (Concurrent)

Magnetic Sound Transfer for Super 8; A Phase Comparison Cross-Modulation Test Instrument.

COCKTAIL PARTY, BANQUET AND DANCE—Evening

MOTION-PICTURE AND VIDEOTAPE
PRODUCTION TECHNIQUES SYMPOSIUM

THURSDAY, APRIL 29

SESSION I—Morning

Panel: The Changing Scene in Production and Release; The Synchronization System; Mobile Production Techniques.

SESSION II—Afternoon

Production Management of Film; Production Management of Tape; New Developments in Lighting Equipment; Experience With a Computer-Controlled Lighting Control System.

FRIDAY, APRIL 30

SESSION III—Morning

Color Production Problems for Film and Tape; Electronic Production Techniques; Random-Access Video Editing System.

SESSION IV—Afternoon

Sound Recording Techniques; New Techniques for Producing Visual Effects; Transfer Techniques; Formats and Standards in Broadcast Television.

customer service is a CAPITAL idea!

**Don't take
Their Word
for it, but...**

Read the recent comments below from some of the top professionals in the film business:

... "It's always a pleasure to work directly with people who really make a personal effort to get impossible things done."

... "We could not have met our show date without the enthusiasm and professionalism of your customer service department."

... "The deadline that we had was bad enough, but to expect a really good print from material that had exposures that wandered all over the place was a little too much to ask. However, that's exactly what I got."

But . . . don't take their word for it. Call our professionals in Customer Service . . . and find out for yourself.

Stop borrowing the Bolex

Running at 64-frames per second, the Bolex would have been perfect for that slow-motion study of that high-speed machine. With a 400-foot magazine and constant speed motor, the Bolex could have given you 12-minutes of shooting capacity for that film about the assembly line.

You could easily have attached the Bolex to the microscope for that sequence in the research film.

And the Bolex, with its wide range of lenses and easy one-man operation would have been the perfect choice for that worldwide public relations film. It could have handled the arctic and tropic sequences without getting frostbite or sunstroke. And done the sync sound portions, as well.

But you won't be able to borrow the Bolex this time. It's being used to do a time-

lapse study of the construction of the new plant. And it's going to be tied up for awhile.

Maybe what you need is another Bolex.

A Bolex makes as good a second camera as it does a first. Because with Bolex you can get exactly what you want in a camera. You never have to buy more capacity than you need.

You might start off with a compact 100-foot Bolex and later extend your system to include a 400' magazine with motor drive for sync sound shooting.

If one of our zoom lenses (with or without automatic exposure control) will do the job, fine. If not, Bolex also offers extreme wide angle lenses. Telephoto lenses. Macro lenses that focus as close as 1". Lenses as fast as $f/1.1$, with pre-set di-

aphragm. Whatever you want. And never more than you want.

Whatever Bolex you choose, you'll have a camera capable of turning out films of professional quality—rock steady and sharp. A camera whose built-in features can produce fades, lap dissolves, double exposures and many other sophisticated effects.

Below are suggested Bolex combinations for various uses.

For a free 32-page catalog, Industrial Bulletin and list of Bolex dealers near you, write to address below:

**How
Equitable
salesmen
learn
the facts
of life.**

February 15, 1971, The Equitable Life Insurance Society started using cassette TV to help train their salesmen in the facts of life insurance selling.

The system: CBS Electronic Video Recording. The only cassette TV system in production; a system which is compatible with those already manufactured and distributed under CBS license in the United Kingdom, France, Germany, Italy, the Scandinavian countries and Japan.

According to Mr. Thomas Hatcher, The Equitable's Director of Experimentation and Evaluation, "EVR will give us, for the first time, an effective and economical method of putting training informational materials in the hands of every one of our 8,000 salesmen located anywhere in the United States."

The Equitable is only one of several leading organizations that are rallying around the EVR standard for their training and informational needs. All are attracted by EVR's low initial cost. Players are less expensive than either videotape or 16mm movie playback devices and low distribution costs (EVR Cassettes can be produced, stored and shipped for less than per videotapes or 16mm film of comparable running time).

EVR is also easy to operate. Cassettes read themselves automatically when placed, on phonograph records, on any EVR Player.

The player connects directly to the antenna terminals of one or more ordinary TV sets, and provides pushbuttons which permit instant replaying of any scene, the "freezing" of single frames without flickering and rapid advance or rewind of the entire cassette in seconds.

To learn more about EVR and how you can convert your training programs to this low-cost cassette TV system now . . . mail the coupon now.

CBS ELECTRONIC VIDEO RECORDING

51 West 52nd Street, New York, N.Y. 10019

Horizontal Editing Catches On

European favorite
becomes popular in U.S.

One user tells why

Some editors resist change

■ Geography often plays a major role in defining the methods individuals or entire industries choose to accomplish similar ends. In the case of film editing techniques, a clear-cut difference has been apparent between European and American filmmakers.

In general, those abroad have consistently preferred the horizontal or flatbed editing machine. This type equipment throws the picture (or pictures) via a revolving prism onto a screen (or screens) at the rear of the table. Large footages of film can be run through the machine with picture and sound reels running either separately or in synchronization. The film travels from "feed" plates at the left, through a drive system, to the prism and sound reproducing head in the center, and then to take-up plates at the right.

In contrast, film editors in the United States have consistently opted

for the standard "moviola" (although a brandname, it is often used generically, at it was the first of its kind). This upright machine projects the image through mirrors and a simple lens onto a ground glass screen. Picture and sound can be run synchronously or independently. Preference for this type equipment has been almost unanimous in the United States—until relatively recently.

Irving Oshman, president of Vision Associates in New York, is one American film editor who has made the switch and is quite pleased with his decision. "The flatbed machine makes the editing room a much simpler place to work in," he noted.

Describing the factors that led him to make the investment, Oshman explained that during the last ten years, a tremendous increase in technology in the motion picture industry has taken place. Everything has become mobile and portable, and the result is that producers complete movies more quickly.

"The only area in the motion picture industry which did not see equivalent technological steps—at least in the United States—seemed to be the editing room," said Oshman.

Nevertheless, costs in this area of production, like costs in other facets, kept rising, and this was a major factor influencing Oshman's investment. "I was looking for a faster way of doing a better job," explained Oshman. "Cost was a factor, not competition."

When Oshman was evaluating available editing machines, only two brands—Steenbeck and Kem—were readily available in this country.

Kem modular horizontal editing machine offers Irving Oshman, president of Vision Associates, speed and efficiency.

since then (Oshman bought his machine in April, 1970), however, Magnasync/Moviola, makers of the standard upright machine, has displayed a horizontal editing table.

"The Steenbeck was an efficient machine," said Oshman, "but it was limited in its capacity to hold more than one picture. I'm involved with A and B camera work. The Steenbeck could handle three elements—one picture and two audios."

It should be noted that this is no longer the case, according to William A. Engstler, President of General Enterprises, Inc., distributors of Steenbeck equipment in the United States. The Steenbeck ST 6000 six-plate machine is a case in point. Engstler said that there are more than 30 different Steenbeck models, adding, "If you're a busy filmmaker, it often pays to have two machines."

Having chosen the modular Kem Universal, Oshman explained that with the proper extensions, it could handle four various elements—one picture and three sound tracks, two pictures and two sound tracks, or three pictures and one sound track.

"And the beautiful part was that the modules were literally interchangeable within 60 seconds," Oshman praised, "It gave me the flexibility I need."

Although there were initial problems to be overcome, the new editing machine has saved the day more than once for Oshman. He cites as an example a film that Vision Associates did on an exceedingly tight schedule for Eastern Airlines. The day on which the answer print had been promised for screening was moved up two weeks, and the photography was late in being completed. By the time it was finished and developed, and the sound synchronized and coded, Oshman had less than 17 days to edit 40,000 feet of film.

Under normal conditions, he explained, after screening all the material, he would divide it into scenes. With an average of 40 scenes per 1000 foot roll, the result would be 1600 rolls of films. Each then would have to be carefully cataloged for scene retrieval.

Using horizontal editing, Oshman did not have to approach his footage this way. He could find any shot in seconds, as the Kem runs film up to 1000 frames per second.

"No shot is more than 40 seconds away from screening," Oshman explained. "The editor can easily expend that time locating the shot on the rack. You're never looking for trims or outs. They are always on the same roll they were on initially."

He commented, "The breakdown process alone on the moviola (upright editing machine) would have taken the better part of a week."

Instead, working from one week-end through the next, Oshman was ready for his client to view the film when he needed it. Nine days later, the corrected answer print was ready.

"Given the same conditions and using the moviola, we would never have had the answer print ready on time," noted Oshman. "On that particular experience, I figured I expended 40 percent less time than I would have on the moviola."

Despite the Kem's versatility and speed, Oshman did have difficulties with it initially. Mechanically there were problems, he explained. Although it never went out completely, there were times when it lost one of its four elements.

"I think we have them licked now, however," said Oshman. "It was a new design and with all new designs, there are certain shake down problems. Maybe I bought it a little too early."

There were, and are, other problems regarding horizontal editing in general, but these are psychological in nature. "You have to be prepared to spend some time re-thinking working procedure," he said. "You cannot think moviola and apply it to horizontal. You just have to change your work habits and patterns."

Many long-time editors are unwilling to make this change. The hangup is still there, according to Oshman. "I've had guys that've worked with moviola that just refuse to get involved with this machine," he emphasized.

Sometimes they protest that short film lengths of four or five feet cannot be handled on a horizontal machine. Oshman noted that working with such small rolls is not necessary, as there need be no separate trims or outs with horizontal editing.

The lack of flexibility in editing approach may be one factor accounting for relatively slow acceptance of horizontal editing in the United States. Bob Rowen, Vice

Other flatbed machines available in the U.S. Top: Steenbeck—first to be imported to United States. This St 6000 is one of 30 models. Bottom: Moviola—when available—will be first horizontal machine made in U.S. Moviola will continue manufacture of upright editing machines, also.

President of Kem Electronic Mechanic Corporation, was among those suggesting this theory. "Standard moviola was the typical machine in the United States, and was used by editors and assistant editors . . . It was kind of a locked-in thing," he said.

However, horizontal editing has been accepted gradually in the United States. Garey Lundberg, of

Continued on page 16

ADVANTAGES OF HORIZONTAL EDITING

(As outlined by Bob Rowen, Kem Electronic Mechanic Corp.)

- * Because the film rests on its edge, it is protected against scratches and other possible damage.
- * Because cores, not reels, are used, space used for film storage is less.
- * The track always moves with the oxide side in and the shiny side out. As a result, the editor can mark on the back without causing dropouts.
- * Higher speeds offer faster retrieval of a particular shot.
- * The prism system in the horizontal machine eliminates claw-type movement of film.

HORIZONTAL EDITING *Continued*

the Film Editing Division of Magna-sync Moviola, Inc., explained that because of the expense of making films in America, many young producers were going abroad to shoot a picture, and were taking the standard upright moviola with them as luggage. Abroad they were exposed to horizontal editing.

"Many experimented with flatbed

editing and returned to this country with mixed emotions about it," Lundberg said. Accordingly, he explained, his company did not move toward horizontal editing equipment right away.

"We were basically the leaders of film editing equipment for, say, the past 50 years," he noted. "So, we sat back and watched to see

whether (and when) horizontal equipment would become more widespread in the United States."

By 1968, with the Kem and Steenbeck fairly well entrenched, Moviola's dealers were encountering growing demand for flatbed equipment. Accordingly, Moviola began research and development plans.

In October, 1970, the company exhibited a prototype horizontal machine at the SMPTE convention in New York and at the Photo-Kino Show in Cologne, Germany. Certain initial "bugs" had to be ironed out, however, so that the moviola horizontal equipment is not yet available for purchase, but will be shortly.

To some film editors, cost may be an obstacle to investment in horizontal equipment. "They're very expensive," noted Lundberg. "For the price of the three major machines—the Kem, the Steenbeck, and the Moviola—in the most sophisticated models you can buy three of the series 20 upright moviolas."

Oshman also noted the cost as a serious consideration. The Kem Universal, one picture, two sound model without extensions costs \$9755; the Steenbeck St 6000 costs \$10,550; the Moviola flatbed will cost roughly \$7500. Each machine, of course, has its specific merits, modifications, and resulting price variations. Compare this, however, with an upright moviola with one picture and three track units for a total cost of \$4500.

Oshman quickly added that his investment in a horizontal machine will amortize its cost in approximately two years because of the labor saved.

John Carter, president of John Carter Associates and editor of the newly released theatrical film, "Taking Off," concurred with Oshman's enthusiasm for horizontal editing. "If there's any doubt about horizontal editing, it's in the theatrical film, not the business film area," he said. However, with the advent last year, of "Woodstock" which was horizontally edited on a Steenbeck and, now, "Taking Off" which was edited on a Kem, perhaps this film area may also move toward flatbed editing, as American business film editors are doing. ■ MB

We want to hand it to you.

And we can easily because Audiotronics' attractive new PVC series video cameras are the most compact, lightest-weight, lowest-cost professional quality cameras on the market today.

The 2 1/2 inch professional with 1/50 second resolution produces incomparably sharp, crisp pictures. It has an excellent gray scale, and built-in, automatic sensitivity circuits compensate for a wide range of illumination changes. Internal sync is provided or the cameras can be driven from any external EIA source.

Model PVC 808 features a three-inch electronic viewfinder with self-contained light shield and picture crisping circuits. Model PVC 818 is a self-contained camera (non-viewfinder type) but the viewfinder stays for instant action on an optional feature. Both models are designed to handle a wide

variety of fixed focal length and zoom lenses.

When you decide on a PVC series camera, we will hand it to you... for your wisdom in choosing the most compact, lowest-priced, most attractively styled video camera available anywhere—from Audiotronics—naturally!

Write today for more information on the PVC series video cameras and the name of your nearest Audiotronics Video Systems Representative. We will be happy to send you both.

INSTANT EVERYTHING

(the next-best thing to instant success)

Most moviemakers will agree that the difference between good footage and great footage goes beyond talent and luck—it's the little things that often make the difference. Little things like extra mobility, to follow fast-moving action. Or a few extra dB of silence on the set. Little things... like the fleeting moment of news, captured because of a minute saved in set-up time. Or an unusual camera-mount that produces the "different" point of view you need. Little things *do* mean a lot. And, for many of those important "little things," cinema professionals turn to Cine 60...

Instant Power

Wherever you go, whatever the shooting situation, Cine 60's exclusive power "Blimp" gives you the power to run every professional camera on the market. It has the all-important mobility to go where the action is. Available in voltages from 6 to 30V (and up to 7 amperes-hours), it features rechargeable nickel-cadmium cells, sealed design and an automatic overload safety switch. With built-in charger and plug-in coiled power cable, it is one of the most widely-used power sources available today.

Instant Quiet

Silence is golden, yet relatively inexpensive with the Cine 60 battery-powered fiberglass Blimp for Arriflex cameras. Only 19 pounds, the blimp permits shooting in even the most restricted spaces—with all standard lenses (even 18mm, without vignetting!). Inside, the camera is securely mounted, yet isolated acoustically from its surroundings. On the outside, a new, gear-driven mechanism permits smooth, accurate follow-focus via large, easy-to-use knob. All other controls and connections are conveniently placed on a rear control panel.

Instant Camera Pod

Our single universal shoulder pod ("unipod") is a lightweight shoulder mount that accepts all cameras. Easily removable between takes, it keeps the camera in the ideal shooting position while offering the maneuverability of single-shoulder construction. Used with the Uni-Eclair Mount (detailed later), this is the only practical pod for the Eclair NPR-16. (By the way, we also have an excellent double-shoulder pod as well.)

Instant Camera Platform

Wherever and whenever you need a stable camera platform, chances are our Vacu-Platform can provide it. This rugged suction-actuated device can be positively fastened to any smooth surface (car-tops, floors, etc.) without marring. A flick of a lever on its extra-large suction mounts does the job. Especially useful for low-angle work, it mates with standard tripod heads.

Instant Camera Mount

If you've ever watched a good shot pass you by while trying to thread a camera onto a tripod or shoulder pod, the Cine 60 Snaplok is your answer. Combining rapid, fail-safe operation with the ruggedness and precision alignment needed for day-in, day-out use, the Snaplok features light weight and high rigidity. One section mounts on the camera; the other on tripod or shoulder pod. A single pushbutton instantly separates the two. The base unit of the Snaplok is compatible with standard 1/4" and 3/8" sockets.

Instant NPR

Our Uni-Eclair Mount is just what the name implies—a universal mount for the Eclair NPR camera. Rugged, yet surprisingly light, it may be left on the camera at all times, ready for hand-held operation or shooting with a tripod or shoulder pod. And, it makes a handy camera rest between takes.

Instant Zoom

If you own one of the fine Angenieux zoom lenses, you can have smoother, more consistent zooming with one of our electric zoom drives. Available in four sizes (for the 9-95mm, 12-120mm, 12-240mm and 25-250mm), these units feature a precision gear assembly which mounts securely and directly to the lens barrels. The gear assembly, in turn, is rigidly coupled to a high-quality DC motor via a flexible shaft. The motor is powered by a transistor-regulated nicad battery pack featuring directional push-buttons and a smooth, variable speed control—all contained in a convenient, palm-sized case—with built-in recharger. (We also make an instant-mounting, collapsible rubber lens hood for the Angenieux 25-250mm zoom.)

Instant Rentals

Cine 60 also enjoys an excellent reputation for its line of top-quality rental equipment. All thoroughly maintained and delivered on-time. We'd appreciate the opportunity to fill your rental needs.

Instant Information

Whatever your filming needs, all you need to know for "Instant Service" is one name and one number:

CINE 60
INCORPORATED

Film Center Building/630 Ninth Avenue
New York, N.Y. 10036/Tel (212) 586-8782

Arthur Florman, President of F & B/Ceco Industries, Inc., accepts one of 37 Arriflex camera outfits in the

Why F&B/Ceco bought \$200,000

Says Arthur Florman, President of F & B/Ceco Industries, Inc.—one of the world's largest motion picture equipment rental houses:

"This is the largest single order we have ever placed for this equipment. The current economic decline was no deterrent to a \$200,000 Arriflex purchase; in fact, it was one of the incentives since, as the backbone of our rental departments for so many years, Arriflex cameras have proved themselves reliable, trouble-free and simple to maintain.

These 37 new Arriflex camera systems supplement our present inventory of over 150 Arriflex cameras, and is a start in a total equipment replacement program. The new equipment has been distributed to our New York, Florida and California rental departments, so that professionals in all parts of the country can capitalize on the increased availability of brand new, first-rate equipment. Our main concern is, of course, the satisfaction of our customers."

The rental house is the most demanding proving ground for any camera. It requires the camera to be prepared for daily operation, by many different cameramen, working under widely varying

Camera rental room from Bruce E. Harris, Executive Vice-President of Arriflex Company of America.

* worth of Arriflex equipment

conditions on all kinds of assignments. It demonstrates a camera's ability to accept a long, busy day, with a minimum of downtime. And it reveals the popularity and universality of the camera's features, for, despite mechanical excellence, cameramen will not accept a tool they do not feel at home with.

Arriflex cameras fulfill these requirements today, as they did 30 years ago when ARRI produced the first mirror-shutter motion picture camera. Arriflex ruggedness and reliability are taken for granted, their maneuverability and creative capability unmatched. For the private owner, the production house and the rental house alike, these characteristics are the most important considerations in a camera purchase. That's why Arriflex has become the number one line among professionals. That's why Arriflex sales volume is substantially greater than that of all other makes combined.

This 4-inch attaché case turns any office into a movie theatre in less than thirty seconds.

It's the Bohn Benton Institor; an elegant, rear screen (also front screen), Super 8, sound and motion picture projector.

It's light, only 17 pounds.

It's simple to operate. In less than 30 seconds, you can have it set up and running in broad daylight.

It's cartridge loaded. There's no film threading.

It's an attaché case. Easy to carry. Just 4-inches wide.

And it's sensibly priced. \$300 for single units. Or as low as \$240 in quantities.

Write today for our new brochure: Bohn Benton Inc., 110 Roosevelt Avenue, Mineola, New York 11501.

Call for new market attitude

Speed yes, but quality must rule

Looking over 1970, BUSINESS SCREEN wanted to discover what that year meant to film laboratory and production service people. Was the economic slump sufficient to affect sales volume? Did the economy limit new equipment investment? Which equipment was bought despite the tight money situation? What was the rationale behind these invest-

ments? How did 1970 affect competition between film labs? What problems and new developments arose specific to 1970? And finally, what is the outlook for the rest of 1971?

To obtain this information, BUSINESS SCREEN contacted a number of film processing labs throughout the country. Their replies to our queries are in the following report.

"On paper we're in good shape, but people are either not paying their bills or they're slow payers..."

—Larry Lippman
Design Effects

"You never know when you're selling them, whether they have an account or they're submitting a pilot."

—Milton B. Kaye,
General Manager
Musicues Corp.

REASONS FOR OPTIMISM

Sales volume of labs and services during 1970 was diverse. A number of companies reported comparative increases from 1969, ranging from 10 to 50 percent. Others felt the full impact of the recession, and called 1970 "a disaster."

In some markets, although business had fallen off, volume continued to flow from other sources—and in a few cases, it matched the previous year. One laboratory operator reported that in an effort to become more competitive, he had reviewed costs, and subsequently

solved his problem by eliminating a third shift.

On the other hand, VPI Services, a laboratory in operation less than three years, described 1970 as "fantastic." The company's sales volume doubled that of the previous year.

The year was also a good one for Consolidated Film Industries, who reportedly did more feature pictures than ever before, while the number of industrial non-theatricals they produced remained about the same.

Business remained at an equilibrium throughout 1970 until the last

quarter of the year, reported an audio sound company spokesman. During that period and the first month of 1971, he estimated, an increase in volume took place of from 15 to 20 percent.

Thirty percent of the laboratories responding to BUSINESS SCREEN's survey described 1970 as "lousy" and "a disaster." To them, the 1971 outlook appeared grim, with any future increase in business coming as the direct result of political opportunism or a shift in the economy.

This group was outnumbered, however, by an optimistic 70 percent. The majority of companies were enthusiastic about the outlook. Basing their opinions on an upturn in business in January, their reactions ranged from "things are virtually back to normal" to "everything is becoming wide open."

CONTINUING INVESTMENT

Despite slower volume and poor cash flow, film laboratories have necessarily continued to invest in equipment.

As one lab spokesman indicated,

"You can't take old equipment and speed it up because it will shake itself apart."

Raising investment capital, however, has become a major challenge

for most labs. Some have utilized long-range financing at high premium rates. Yet, unless business improves considerably, this may only perpetuate a bid situation.

In addition to problems of raising capital and receiving slower payments, laboratories have experienced the rising costs of re-equipping.

"It's a great deal more expensive to update equipment than it was

"In the not too distant future, we ourselves should be in tape duplication... we think tape is going to be a stimulant for the total visual market."

—Neal Keelin,
Vice-President
De Luxe General, Inc.

"Competition forces you to have the best product at the best price."

—Byron Roudabush, President
Byron Motion Pictures

"We expect an avalanche of business from educational sources."

—Alfred Bruch, President
Capital Film Laboratories, Inc.

"Everyone in industry is getting a video tape center, audio visual center where they make sales training films, presentations and commercials."

—Thomas J. Valentino, Jr.
Vice-President
Thomas J. Valentino, Inc.

"In January '71, things were virtually back to normal, or a trifle under."

—Melvin Gold
President
Manhattan Audio Co.

10 to 15 years ago," explained Frank McGeary, of Motion Picture Laboratories, Memphis, Tennessee.

Norman Lars Bebell, president, Bebell & Bebell, New York, concurred. Reporting on recent capital investments, he said, "We borrowed \$300,000 . . . and spent \$450,000. There is no such thing as building a small lab. You just don't buy a machine for \$20,000 or \$30,000."

"But competition forces you to have the best product at the best price. In order to give customers the best quality, we must have the finest equipment at the best price," said Byron Roudabush, Byron Motion Pictures, Washington, D.C.

Realizing this necessity, laboratories have continued to invest in equipment, much of which is related to the film industry's growing activity in 8 mm and super 8 mm gauge film.

This activity is evidenced by Alfred Bruch, president of Capital Film Laboratories also in Washington, D.C. "We're all geared up for

it," he said. "We expect an avalanche of business from educational sources."

Also concerned with 8 mm film processing equipment is Reela Film Laboratories, Miami, Florida. The company has just added their second 16 mm-to-super-8 mm optical reduction printer. The demand, according to Ted Sack, for super 8 mm commercial reprint has been sufficient to warrant adding this equipment.

"The new equipment we're looking to has to do with 8 mm magnetic sound, so that we can speed up the transfer of sound tracks to 8 mm prints," added Frank McGeary.

A Super-8 mm printer is scheduled for purchase in early 1972 by Cine Magnetics Film Laboratory, but this year's purchase will be a second 16 mm printer.

Although the trend toward the wider use of 8 mm film—along with the processing equipment entailed—bears watching, some film laboratories have planned investment in

other types of equipment.

Videotron, Glenview, Ill., for example, plans to install a 3-M Color Transfer machine this year. According to Jack Cook, the new equipment will double volume.

High speed equipment—a new 16 mm-to-8 mm optical reduction printer, a magnetic sound transfer system for 8 mm, and a new Eco 3 color processor—has been added by Calvin Laboratories, Kansas City, reported President William Hedden.

Jamieson Film Company, in Dallas, manufacturer of processing machines, plans to add the 35 mm color negative-positive capabilities it currently does not have, reported Bruce Jamieson, president.

New York's Manhattan Audio Company recently implemented two electronic post sync systems in its sound studios.

It appears, then, that throughout the United States, film laboratories have found that continued equipment investment is a necessity, despite a slower economy.

SPEED VERSUS QUALITY

The race for speed and quality in film lab production is growing more acute. At times, one factor seems to be working against the other. As one spokesman for a major lab in New York City put it, "I believe that some of the business we've lost is due to sloppy work."

Another lab representative emphatically states that his company

has refused to install new equipment that provides only more speed. "We want the quality as well, or else the investment is self-defeating," he added.

The need for speed has become increasingly more pressing. Film producers demand it to meet client pressures. It's the element over which infighting becomes highly

competitive.

Some labs have met this demand for speed, without regard for quality. In other words, they cut corners to obtain business during tough economic times. However, labs taking this route may have cut off their noses to spite their faces.

Other labs claimed that both ends—speed and quality—are achievable through investments in the right kind of equipment. Such investments have been made recently by some of the nation's leading firms.

Cine Magnetics Film Laboratories has added a high-speed super-8 continuous reduction printer which, management maintains, has totally revolutionized their lab. In 14

months, the equipment has been out of operation less than a total of 10 hours. The quality, according to Fred Wells, exceeds the lab's finest non-continuous step reduction.

At Motion Picture Laboratories, upgrading equipment meant adding a panel printer, new processors, and an analyzer. "The analyzer has im-

proved the first print capability by a couple hundred percent," said Frank McGeary.

Consolidated Film Industries in Hollywood has invested in relief printing machines that print 300 feet per minute, to save time during all editorial phases of the picture production.

At Manhattan Color Laboratory in New York, increased production necessitated the installation of processing machines with maximum capacity of 3,000 feet per hour. Their high-speed printer has a capacity of 750 feet-per-minute, a potential far exceeding their original printer's output of 100 feet-per-minute.

PROBLEMS: PEOPLE, PROGRESS

In the film world, as in every other industry, new technical developments have resulted in new problems to be solved. That most often mentioned among lab personnel is the lack of standardization in equipment and procedure.

In processing, for instance, a number of lab operators felt the industry was going in too many directions. "For industrial and educational processing, there are about 26 different processing methods," noted Bernie Barnett, VPI Color Center.

"If six different labs handled a job, each could come up with something different, and none could be used on the same projector," he added.

Lack of consistency among 8 mm projectors is another aspect of the problem. One laboratory spokesman indicated that of the many projectors on the market, each had some small variation—not only in sound separation, but in cartridge configuration. "A complete hodge-podge," he said.

Evidently, many users are unaware that projectors do have different sound and picture separations. Lab personnel's most consistent cry seemed to be that their customers frequently neglected to provide adequate information—including the projector and film to be used.

Another problem related to projectors was voiced—the difficulty of

finding one that can withstand constant use. Many lab spokesmen indicated they were forced to use stationary projectors in a price bracket of \$1000 upward.

These difficulties, along with the growing use of videotape and cassettes, account for the fact that laboratories have been actively trying to predict the future impact these two media will have on the film industry. Few film labs currently are equipped for servicing them, so opinion is somewhat divided.

Larry Lippman of Design Effects noted that tape is making inroads on the film industry. However, he reassured, "I think there is room for both. They are compatible, despite the fact that both have their good and bad points."

Some laboratories are considering expanding their facilities to be able to deal with the new developments. For example, Neal Keehn of De Luxe General, said, "In the not too distant future, we ourselves should be in tape duplication. But on the whole, we think tape is going to be a stimulant for the total visual product market. Whichever way it goes, we will go."

Similarly, at VPI Center, top officials indicated that the future of video tapes is very much on their minds. "We feel there is going to be a marriage of electronic tape and television, and we are investigating the video tape and cassette. Audio-

visual techniques are leaning more and more on cassettes," they said.

Some industry leaders, however, were less receptive to either cassette or videotape usage. They described the cassette as an industry "frill" that in eight years might become a ten dollar business. This, too remains an open question.

Decisions regarding such new developments, as in other areas, is to a large extent a function of management attitude. Management outlook was cited as the source of another difficulty that is present in the film industry.

Neal Keehn cited his own company as an illustration of the point. "When G. Carleton Hunt became president five years ago, much of the equipment was old. The lab handled the equipment lovingly, and it turned out beautiful prints. Laboratory morale was a factor."

He added, "Essentially, every lab has the same equipment. What makes the difference is attitude. Two labs can have the same equipment, but getting out the same amount of work in three days will be normal for one, while the other will take three weeks."

A somewhat related industry complaint is that not enough formal lab technician training is available. High schools and colleges offer creative training in educational and industrial films, so that they turn out many capable producers. However, technical lab skills are developed only by apprenticeship in the industry.

One lab has dealt with this situation by instituting a rotational training program. Participants are moved every six months from processing, to printing, to timing, until they are

adequately skilled. Then, they are moved upward in rank.

Perhaps the most fundamental industry problem currently, is the price war. Increase in the number of laboratories, the difficult economic slump, market changes, have all contributed to competitive pricing pressures.

Attempts to offer more than the competitor offers have been varied.

As discussed, a number of labs have installed equipment to emphasize speed. One lab has offered a complete package to industrial clients that includes shipping of films and storage facilities, thereby removing responsibility from the individual film user.

Nevertheless, many film people expressed the opinion that another approach might be most effective for

the industry as a whole. Because of the similarity in the pricing problem and the existing competition between all labs, a closer, more cooperative relationship between them might establish a minimum standards. Such an action would result in a quality war, rather than a price war. In addition, it could lead to the resolving of some in-house inefficiency.

MONEY PINCH

The slow payment pattern reportedly is indigenous to the film lab industry and a condition the industry has permitted. It takes 60, 90 and 120 days to turn an account around. Yet, for some, the prompt payment of bills in 1970 meant the ability to survive while business was down.

Approximately 500 small production companies have sprung up, according to Milton Kaye of Musicues Corp. in New York. These companies are composed of people dropped from production departments in large advertising agencies.

"You never know when you're selling them," said Kaye, "whether

they have an account or they're submitting a pilot."

Larry Lippman of New York City's Design Effects conceded, "On paper we're in good shape, but people are either not paying their bills, or they're slow payers. If a man owes me \$10,000, I'd be happy if he would send me \$1,000 so that I can split it with my suppliers."

To handle this problem, many labs have become very selective and overly cautious of the people with whom they will work, and many have hired full time credit men.

CHANGE AND CHALLENGE

Nineteen seventy brought both challenges and changes to the film industry. Tight money and fierce price competition were among the financial difficulties that confronted film laboratories. Although a few reported an increase in sales volume during 1970, most firms were at least moderately affected by the economy's slowdown.

Nevertheless, equipment investment continued. Many of these investments were made to enable laboratories to offer customers faster on-target service. However, equipment for processing 8 mm and super-8 mm film was also stressed.

The entire industry was eyeing the development and growth of videotape and cassettes. Differences of

opinion existed regarding the extent to which they will be used in education and industry. Some labs were contemplating expanding into this area of enterprise; others were resisting the new influence. However, all agreed that the two media would bear close watching for future effects on the film industry.

Lack of equipment standardization was stated as a problem that confronted film people. Particularly observable in the numerous types of projectors that are available, the situation at times resulted in confusion between film user and processor. Often, the customers' failure to indicate the type equipment being used resulted in less efficiency.

Attitude in the lab was of impor-

tance to film processors in 1970. They indicated that this was a prime influence on speed and quality, factors that distinguished labs with essentially the same equipment.

Speed and quality were also mentioned as the ideal criteria for competition between labs—not price. Some spokesmen suggested that a more cooperative relationship between labs be sought, as the entire industry was affected by common problems. If a minimum standard could be established, labs would be in a better position to emphasize quality.

In general, the outlook for 1971 was optimistic. Many laboratories expected an upswing in the economy. Many—although not all—were anticipating the growth that the new technological advances in tapes, cassettes, and super-8 would make possible. All things considered, film processors were meeting problems and changes as challenges, not as obstacles.

Automatic Filmstrip Cutter and Canner

New, fast economical way to break down filmstrips from bulk roll to container in single fully-automatic operation. Let us tell you about this revolutionary piece of equipment in our free brochure.

Cutting and canning services also available—please let us quote especially for your needs. Tool-Tech Engineering can also design your special equipment and save you money.

MUSIC AND SOUND EFFECTS:

Essential tools of the professional
Film Media Producer

"MAJOR" offers you a full 73 hours of background production music for titles, bridges, background—for scoring, editing, recording and dubbing music for you:

- DOCUMENTARIES • COMMERCIALS
- TV FILMS • FEATURE PRODUCTIONS
- SLIDE FILMS • INDUSTRIAL FILMS
- ANIMATION • SALES PRESENTATIONS

"MAJOR" specializes in sound—you get exceptional technical know-how and beautifully recorded original music on LP records or 1/4-inch tape, or on 16 or 35mm Mag. Tape ready for a mix.

IMPORTANT: "Major" owns its own copyrights on all production mood music in its library. World rights available to you on a completely sound legal basis. Re-recording rights on a "per selection" basis or "unlimited use" flat fee arrangement.

The World's Finest for Color Release Printing . . . PETERSON COLOR ADDITIVE BI-DIRECTIONAL PANEL PRINTERS

Helping a growing list of leading film laboratories to achieve new standards of excellence as well as cost economies, the PETERSON COLOR ADDITIVE PANEL PRINTER was specifically designed for high volume color release printing. It was built for use with the standard one-inch 8-hole tape system.

Join the leaders like ALLIED FILM • BYRON MOTION PICTURES • DELUXE GENERAL • MGM LABORATORY • MOVIELAB • NAVAL PHOTOGRAPHIC CENTER • AND TECHNICAL-COLOR who have recently acquired one or more of these superb machines.

The two main concepts of the printer are (1) complete interchangeability with existing color additive printers. Any negative or program tape now in your vaults can be put on this machine without additional negative or tape preparation. (2) Minimum handling of picture and sound negative. In this bidirectional printer, the negatives need to be threaded only once.

Good SHORTSmanship!

In hundreds of top theaters the "added attraction" these days is THEATER CAVALCADE, a 10-minute sponsored "newsreel."

This unique public relations concept—created by Association-Sterling Films—gives sponsors an unprecedented opportunity to reach theater audiences in full-color on the wide screen, at very low cost. For that matter, most sponsored segments in THEATER CAVALCADE are adapted from existing 16mm films—re-edited and blown-up to 35mm. Sponsors pay for *exposure only*. We assume all costs for editing, narration, music and effects, and prints. If you would like to see your present film become a "selected attraction" in first-run theaters in major markets—our current issue played three weeks on Broadway with the latest Elliott Gould comedy—contact us today. The next issue of THEATER CAVALCADE is on the boards for an early release.

THEATER CAVALCADE issues have included Clairol, Ford, Florida Citrus Commission, South African Tourist Corporation, General Dynamics, Sears Roebuck and Co., A. T. & T., and the American Trucking Association Foundation.

Concerto for NPR and Orchestra

Shooting a hundred-man symphony orchestra that is getting paid by the hour, you obviously need to use multiple cameras, arrange to stagger the film runouts and hope to avoid retakes.

For the Bell Telephone Hour "Sounds and Sights of Chicago," Director of Photography Andrew Costikyan used three NPRs to cover the Chicago Symphony in a special concert for the show.

Two of the cameras were placed in the audience for wide-angle shots of the whole orchestra, for cutaways of the audience and for telephoto closeups of the players and the conductor.

But the director needed some shots of the conductor from the players' point of view, and some wider angle closeups of the players themselves, to provide the feel of being right in the orchestra.

So Mr. Costikyan put on white tie and tails, and sat right in the orchestra with an NPR. This meant that, for the other two cameras, he was right in the shot!

But the NPR is an unobtrusive camera, so it worked. If you saw the show on NBC-TV, did you notice that one of the performers was playing an NPR?

For an NPR brochure, write Eclair Corp. at 7262 Melrose Avenue, Los Angeles, Calif. 90046; or at 73 S. Central Avenue, Valley Stream, New York 11580. Eclair International: Paris 20, France.

Andrew Costikyan is the man holdin t

eclair

photograph. He is a member of the IATSE Chicago local 666 and has been a first cameraman for 22 years.

If you can't come,

Projection Systems International
Dept. BS-M71 305 E. 45th St.
New York, N.Y. 10017

I can't come, so rush me your new A-V catalog.

Name _____ Title _____

Company _____

Address _____

City _____ State _____ Zip _____

write.

We created these new audio visual facilities especially for you. Here you'll find the most sophisticated equipment available today; everything from rear screen projectors to closed circuit television systems. Loaded with film or tape and ready to operate. But if you can't come, write for our new catalog.

Besides representing most of the leading manufacturers of A-V equipment, we have one of the largest rental inventories of projectors anywhere.

You can rent from us by the day, the week, or the month.

Or you can buy from us.

In either case, we brief you on the available equipment. Familiarize you with the way it works. Assist you in selecting the projector best suited to your needs. And put the entire package, film and projector, in the hands of your salesman.

Visit our new A-V facilities and get the complete picture.

But if you can't come, write for our new catalog.

THE ONE AND ONLY'S

A.V.E. 35MM STUDIO PROJECTOR

2,000 ft. optical/magnetic interlock on pedestal with xenon lamphouse. Easily adaptable to any selsyn interlock or sync system. Requires little floor space. Ideal for interlock previews, sound studios and forward and reverse back-up projection. Also available with incandescent and Marc 300 light sources.

A.V.E. CANARY-TV 16MM PROJECTOR

A telecine projector for both broadcast and closed circuit television. Portable small package featuring optical/magnetic playback, forward and reverse and a solid state sound system. Excellent registration. Also available with repetitive loop attachment, 2½ to 4 hour reel capacity, record amplifier and remote control.

A.V.E. 16MM INTERLOCK PROJECTOR

Runs up to 2,000 ft. 16mm separate picture and magnetic track in perfect sync. Can also be used as magnetic playback dubber. Interlock attachment allows conventional use of sound projector as well and is adaptable to other magnetic playback projectors. Available with xenon (shown) and quartz light sources and record amplifier.

Exclusive from A.V.E. Corporation, the *one and only's* have a unique quality that is strictly A.V.E. Each has been specifically engineered to include features long needed by today's professional market. Each has been designed for simple operation and heavy use. Each is competitively priced and is available for direct purchase or on a lease-against-purchase plan.

Stop the motion... Study the action.

The new DeJUR Cordless Remote Command® combines motion picture and film strip action in a single projector.

Use it as a Standard 8 and Super 8 movie projector. Then, with just a flick of the cordless remote control switch, convert it to a filmstrip projector, pulsing it frame by frame. Point up a missed signal in sports; stop at a complex technical feature; stress a sales point. Then go right back to movie mode.

The Remote Command is the ONLY projector that allows you to combine both movie and single frame projection on the same film and still retain full brilliance on stop action frames without burning the film. Other features include fully automatic threading, frame-by-frame advance, reverse projection, fast rewind, room-light outlet, zoom lens, slow motion and variable speed control.

Write now for full information and the name of your dealer.

**DeJUR Remote Command®
Model 86ZR Dual 8mm Projector. Less than \$220.00**

DeJUR®

DeJur-Amsco Corporation, Dept. AV2, Northern Boulevard at 45th Street, Long Island City, N.Y. 11101.

January 29, 1971

Mr. Albert Amateau
Foreign Language Service
Company
7046 Hollywood Boulevard
Hollywood, California 90028

Dear Al:

The old maestro has done it again!

Walter Welsh telephoned yesterday from Oakland to report on his first Kaiser showing of the Spanish version of "FAHRENHEIT 3300." He screened it at the Kaiser Center auditorium for a group of about a dozen Spanish-speaking people from Mexico and various countries in South America. The reception was very enthusiastic indeed; everyone thought the film was great, both from informational and entertainment viewpoints. And though they were gathered to watch for anything that might make it unsuitable for any particular Spanish-American country they could find nothing to criticize.

And Walt added that he himself likes the Spanish version overall even better than the original English-language picture.

So, congratulations to you and your organization on a job well done.

As always, it has been a real pleasure to work with a thorough professional like yourself.

With warm regards,

Sincerely,

ack J. E. R. McDougall
J. E. R. McDougall
Vice President

Some important capabilities of

CFI

a. Eastman Color Processing

35mm and 16mm. Including release prints and processing and printing Eastman Color Reversal Intermediate (CRI).

CFI

b. Blow-ups

16mm to 35mm—with programmed effects and liquid gate.

CFI

c. Optical Effects

Everything from Anamorphic to Zoom. Quality controlled by the Eastman Electronic Color Analyzer.

CFI

d. Titles

Creative design—theatrical, TV, and non-theatrical.

CFI

e. Work Print Duplicates

35mm and 16mm. Better quality, lower cost, speedier service than older methods.

CFI

f. Super 8mm

"State of the art" quality. Magnetic and optical tracks or silent.

CFI

g. Filmstrips

Major laboratory control for assured quality; includes availability and processing of 35mm ECO film for original photography.

CFI

a. 16mm Color Reversal

Ektachrome commercial film (ECO) and hi-speed Ektachrome (EF) film processing.

Send for catalog of our complete capabilities and one of our handy film/footage/time calculators.

Now we have it altogether...

Complete post production film laboratory services for motion pictures, Super 8 mm and filmstrips...

Under one roof...

... supervised by one group of technical specialists
... and one customer service department

VPI COLOR CENTER is an in-line, one-line operation from start to finish—fully integrated technically. The extraordinary diversity of today's audio-visual techniques has made scattered post-production facilities obsolete. It is no longer practical to ship your pre-print and original material from one place to another, often to be duplicated on incompatible equipment.

Your requirements may change — from slide and filmstrips to motion picture lab services in 35mm, 16mm and 8mm film formats; titling to optical effects; Technicolor Super 8mm cartridge to final printing and distribution. Now VPI COLOR CENTER does it all.

Send for our 17 page Post Production Price List.

MOTION PICTURES

35mm and 16mm production and contact printing including Hazeltine timing and complete finishing facilities.

SUPER 8 MM

Contact and reduction, optical and magnetic printing including all types of cartridges. Authorized Technicolor cartridge licensee.

You Sure Can SCORE with

Musicues

The sole distributor in the U.S.A. of the Chappell Recorded Music Library consisting of over

200 HOURS OF ORIGINAL

DIVERSIFIED BACKGROUND MUSIC from religious to rock, from continental to contemporary, from pastoral to powerful. Always being updated with new releases.

"In the few months since we have added the Chappell "Musicues" service, it has proven to be a most valuable addition to our music library. This is especially true of the modern rock scores, which have been in much demand. The quality and sound of all the Chappell music is excellent." Kaleidoscope Films Ltd., N.Y.

now there's a choice choice.

The Royal 16mm Manual

Models from \$650.00

The Royal 16mm Self Threader

Unique features on both projectors:

HIGH POWER LAMP

TWICE AS BRIGHT

Newly designed General Electric or Sylvania EJL200 W, 24 V Halogen lamps produce double the screen brightness of 1000 W Tungsten lamp. Won't blacken during entire 25-hour rated life, yet generates less heat than standard lamps.

MAINTENANCE

TWICE AS EASY

Fewer moving parts. All major parts (amplifier, film pull-down mechanism, and motor) are modular units which can be quickly replaced with simple tools. Full year warranty on parts and labor. Royal projectors cost much less than competitive equipment when true Total Life Cost (purchase price plus 5-year maintenance) is figured.

CONVERTIBLE

TWICE AS USEFUL

Standard Royal projectors convert to special power source and Marc 300/16 lamp or Colorarc 300/16 in minutes. The classroom projector can produce auditorium brightness for special shows, then go back to work in the classroom with the standard Halogen lamp. Conversion kit can be purchased with the projector, or added any time in the future.

CLEAN AIR CLEAN WATER

Read about our fight against film pollution
in Sixteen and Eight.

Dirt can ruin a film.

And our business is printing and processing 8mm, Super 8mm and 16mm for motion picture release prints.

That's why we've put a highly sophisticated air-control system in our printing and processing rooms, cartridge loading room, and every room where your film is exposed to air.

In this laminar-flow system, air comes from thousands of tiny holes

in the ceiling. It forces dirt and dust particles down to the floor level and out the exhaust exits.

That's why we've recently installed a unique pre-coat water filtration system in our processing department.

Unique because this system filters water to one-millionth of a meter. Result: Incredibly pure water.

Dirt.

We won't let it pollute your films.

AN NOW TO BE "ON LOCATION" FOR ONE OF THE . . .

1971 FILM PRODUCTION WORKSHOPS

. . . IN THE GIANT REDWOODS OF NORTHERN CALIFORNIA

THE ONLY INTENSIVE TWO-WEEK COURSE IN PROFESSIONAL FILM MAKING — TAUGHT BY PROFESSIONAL PRODUCERS, DIRECTORS, CAMERAMEN, SOUNDMEN AND EDITORS.

"hands on" course, where students "learn by doing" — working with professional production equipment under the close guidance of experienced film makers.

EMATOGRAPHY, SOUND RECORDING, LIGHTING, EDITING, DIRECTION for all types of 16mm films: Television, Educational, Industrial, Travel, Documentary, etc.

12 days, 10 hours of training each day — 120 total hours. All equipment, film, room and board included in the low tuition fee.

WORKSHOPS THIS YEAR! JUNE 1-13 AND SEPT. 8-20, 1971. TOTAL COST: \$495.00. Write or call now for details and enrollment application. Film Production Workshop, CAMP LOMA MAR, LOMA MAR, CALIF. 94021. Phone (415) 879-0710.

circle 130 on reader service card

before you buy any
color processor,
ask yourself these

5 questions:

How long does it take to warm up?

Normally it takes most processors 3 to 4 hours to get from ambient 70° to the required 100-110°. With a Treise Color Processor, warm-up takes only 20-45 minutes. (Think how much valuable time you save!)

Once on temperature, does it stay on temperature?

Treise Processors feature a unique "proportional control" system that maintains a close watch over the temperature and provides just the right amount of heat to maintain it at all times. There is no "stop 'n go," no wide fluctuations of temperature. Thus a Treise Processor is more economical to run than any other processor.

Does it provide consistent quality?

No other processor can assure you such unvaryingly consistent quality and performance — end to end, side to side, roll to roll, day to day! This is the kind of performance you should demand . . . and can take for granted when you buy from Treise.

Does it "cut corners" to feature a "cut-rate" price?

Treise Processors meet or exceed all film manufacturers' specifications. All chemical solutions are pump recirculated and filtered. All moving parts in the drive system run on ball bearings. All components are the finest that money can buy.

How easy is it to maintain?

When it comes to maintaining a Treise Processor, there's frankly very little of it. When necessary, however, you'll find that it has been designed with service in mind. For example, the film racks are removable without the use of tools and without disturbing thread-up. Moreover, all pumps, filters, etc., can be easily inspected and replaced in a few minutes, instead of the usual 2 to 3 hours delay!

Write for catalog on our complete line
of Color and B&W Processors!

Paradox

STANFORD SOBEL

PARADOX: If you want to be hot commercially, you have to stay cool creatively.

This month's column begins with the above golden rule, which at one time was on my wall along with several other equally choice gems, known collectively by my colleagues as "Sobel's Cynical Selling Rules." These included such masterpieces as these:

The bigger the talk, the smaller the budget.

The more entertaining the salesman does, the less the chance of getting the job.

And my own favorite:

Your best verbal guarantee is the solemn, moral commitment of a client you trust implicitly, accompanied by a written purchase order.

Almost every producer who ever stepped into the office and read these rules on my wall wanted a complete set for his own office walls. At one time, I thought I would put them together as an ad, offering them free to readers. But then I realized there would be so many requests for copies, I would have no time for script writing.

Like all writers, I have some periods of intensely busy writing activity, and others of comparative idleness. Because there is no predictable pattern to these cycles, it is difficult to plan vacations, turn down scripts you don't really want to write, or manage cash flow in a sensible manner.

This point was brought home to me recently when I met with my accountant, and learned to my astonishment that I had had a very good year. Retrospective analysis established what had happened. Early in the year, anticipating difficult times to come, I had taken a great many small, low budget jobs of the kind that in good years I

often bypass. Then, for no reason that I can determine—even in retrospect—I also received my usual number of assignments. The incredible result? A very good year financially.

One reason that I expected a bad year and accordingly, started taking smaller, less profitable jobs early in the year was that I had competed for a couple assignments on which I had lost out. In both cases, good friends received the assignments, and in both cases, the producers went into Chapter Eleven, leaving the writer holding the bag for those big, high budget scripts. At the time, I was chugging along on a low-budget training series writing a slide film a week for twelve weeks, and being paid for each script as it was delivered.

None of this proves that I am terribly smart—just lucky, at least in this case. I was so depressed by not getting a big script assignment that didn't trim my grape vines in February, and as a result, our wine turned when we tried to cask it last fall. Now you know how badly I wanted those assignments I was fortunate enough not to get.

I mention this business of good fortune because usually it is difficult for the average person to evaluate, and for the writer, it is absolutely impossible. Most things that have been blessings for me professionally have arrived in the guise of calamity. I could write an entire column on the subject of calamity, and another, on depression. I think the reason most professional writers have difficulty recognizing good fortune is that they are depressed so much of the time—be it either good or bad, reasons.

Writers are depressed, obviously when they want a job and don't get it, but they are equally depressed when they don't especially want a job, and they do get it. Then they must write something they didn't really want to write in the first place.

Writers are depressed also when they get jobs with short deadlines, because it means they have to work nights and weekends to complete and hand in the job on time. It means also that they have to scrimp on quality to deliver the script by the deadline. On the other hand, writers are equally depressed when they get jobs with plenty of time to do the writing, because it means they won't be paid for a lot

me, and will have to stretch their money and manage it frugally until invoicing time rolls around.

Depression hits writers when they write a TV pilot and it isn't sold, because it means they won't be getting those nice big regular checks. But it also hits them when the TV pilot is sold because it means they will have to grind out those formula series plots, abandoning other accounts to be picked up by other writers, because they're too busy to service them properly.

Writers are depressed when they get the contract for a complete five day sales conference because it takes so much time out of the year, but they're even more depressed if a sales meeting they wrote last year goes to someone else this year because the client or producer wanted a change of attitude, approach or writing style. As you can see, I understand all these kinds of depression, and I've learned to cope. Strangely enough, however, it seems to me that the worst kind of depression comes from success.

One depression-inducing situation I've experienced many times, but I don't really understand it, despite the fact that it's familiar and recognizable to anyone who's been through it. This is the feeling at the end of a successful meeting—especially a long one, such as a five day sales conference. Everything has gone well; the client is delighted. The equipment has worked, and if it failed, it was repaired quickly so that the audience did not realize. The last member of the audience has ragged out, congratulating you as he leaves.

Now the producer, the writer, the stage manager, and the crew are sitting together in a circle listening to the last reel of walk-out music. It plays through the machine, the sound man clicks off the amp, and everyone suddenly is silent. A strange pall of exhaustion and satisfaction settles over the group. It's time to pull down the greens, strike the sets, roll up the ripfilms, re-wind the movies, take make-up off the cast, but the group just sits there in silence. Absolutely everybody feels absolutely devastated or absolutely no reason at all. It's a shattering experience.

I have learned that the best thing to do at that point is to offer to buy a round at the bar, but somehow, that doesn't help. There is no other situation quite so deadening—except one: the experience of depression when your play closes after two performances and bad reviews.

For a long time, I puzzled over this curious paradox that both success and

Paradox continued

failure produce the same kind of deep depression. Finally I found a clue from the two experiences. In a play, you give up a year of life, and when it folds you watch that year go down the drain. I think you should get your stage failures out of the way when you're young because you still have no appreciation for just how precious a full year of your life can be. It's twice as important at thirty as it is at twenty-five, and ten times as important at forty as it is at thirty.

The arithmetic works that way for sales meetings, too, I think. If you write a good movie, the print exists afterward; you can show it, getting pleasure and a sense of success from it long after the premiere showing. With a good song, you can play it repeatedly. A book can be read again and again, and with each reading you recreate the experience of success.

But with a sales meeting, it's somewhat like a play. When a play closes or a sales meeting ends, that's it—my friends—it's over. No record remains. Even if you tape the meeting, it's still "Goodbye Columbus" because no sane man will sit down to listen to five days of tapes to recreate a feeling. You can't take pictures during a meeting, and even if you publish a newspaper afterwards, it's only a partial record of the event. It helps, but it's not enough. In a sense, no matter how successful a sales meeting is, it is still a failure; it cannot be brought back to life again.

This paradox is true also for traveling shows. When the last show is over, the last trunk closed and the last truck driver dispatched, you then look at each other and say, "Well, that's it. Now what?" The following Monday you find yourself in your office pushing paper from one side of the desk

to the other, remembering how exciting the show was. Boy, do you ever feel rotten!

By a craftily executed *aria da capo* we have returned to my original thesis: that it is very important to keep busy. When you're really busy, you just haven't the time to be depressed; at least, you haven't the time to be depressed right now. It all has to be bottled up and preserved for a time when you have leisure and can afford the luxury of depression.

If you want to stay hot commercially, you have to keep cool creatively. That really means that you have to do the best job you can on each job, whether it's one you wanted or not, whether it's high budget or low, whether it's interesting or dull. It means also that you can't try to read the future. I've had some of the wildest and most unpredictable years, in terms of work-load and material content, with absolutely no logic or reason behind them.

For several years, I was doing film on engines: two cycle versus four cycle, diesel versus gasoline, selling the advantages of two-cycle diesel, showing how to service the engine, *ad infinitum*. I became a flaming expert on engines, and it kept my children in nursery school.

Two years ago I had a sudden inexplicable run on films about kidneys. No kidding. In my books, 1969 was "The Year of The Kidney." I did a professional medical film on cancer of the kidney, a lay film on the artificial kidney, a professional film on renal insufficiency, and a lay film on kidney transplants. No two of these pictures were at all related to each other. They were not for the same producer, for the same audience

ended by the same organization, or sponsored by the same agency. Yet, they all came in the same year, and none of the sponsors were aware that the other films were being made, let alone that I was writing them. Try to predict the future? Who, in 1968, would have predicted that I would write four kidney films in 1969?

It isn't always so haphazard and illogical. When I received the assignment to write the introductory film for ICR's new Century series of computers, I was told at the first client conference that I had been selected because they liked the introductory film I had done for the IBM 360 several years before, but that doesn't usually happen. If that's the real reason, usually the client conceals it. He feels intuitively that it gives him some kind of psychological "edge" on you to keep you in the dark regarding his reasons for having you write the script. Oh, well, everyone has his own little games he likes to play—including writers. After all, games are just another way of keeping your creative cool, and you already know why that's important for a writer—or for anyone.

Paradox is a regular column on the film scene, from the special viewpoint of the writer. Stanford Sobel is a professional scriptwriter for both television and film productions).

circle 139 on reader service card

*when you bring your dailies in at 2 a.m.,
a "skeleton" won't meet you at the door*

We think that when you stay up to all hours completing a day's shooting, you deserve the same quality service as someone who shoots during more conventional "banker's hours." That's why we decided that our customers wouldn't have to put up with "skeleton crews" or "limited service schedules."

24 hours a day, 'round the clock, Cineffects Color Laboratory is manned by three complete staffs of skilled laboratory craftsmen, including supervisory and maintenance personnel. Day or night, we provide the best in additive color printing and processing. Day or night, your film has access to our Hazeltine Color Analyzers and experienced timers. Day or night, we'll blow up your 16mm film to 35mm with the proficiency we're noted for. Day or night, we'll give you the fastest service on quality processing of your 16mm and 35mm color negatives or your release prints. Day or night, your Color Reversal Internegative will be printed on our liquid gate optical bench... a Cineffects process that gives you a **VISIBLY SUPERIOR INTERNEGATIVE**.

So when you bring us your film at 2 a.m. and want it ready by 8 a.m., you needn't be scared to death it will be at the mercy of a skeleton crew or restricted service. While you're getting some much needed sleep, Cineffects Color Laboratory will be working to meet your deadline with the most complete line of 'round-the-clock services in New York.

Kalart Victor Introduces Multiplex TV Film Chain

The monochrome Multiplex TV
Film Chain has Maxi-Media capa-
bility in that either 16mm movies,
35mm filmstrip, or 2" × 2" slides
can be projected for television from
its three input stations.

The fourth station is for the TV
camera. In use, either of its inputs

can be "on line" instantly. Optical
transfer time is 175 milliseconds
maximum. Audio transfer is accom-
plished simultaneously with the pic-
ture. *Kalart Victor Corporation.*

Low Cost Gooseneck Microphone For Fixed-Mount Installation

A low cost unidirectional gooseneck
microphone has been designed for
use in areas where suppression of
background noise is desired. The
Unidyne B Model 515SB-G18
made for virtually any fixed-mount
installation.

It offers 70 percent greater work-
ing distance pickup and rejects am-
bient noise more efficiently than a
omnidirectional microphone. It
maintains its uniformity of pattern
throughout its 80 Hz. to 13,000 Hz.
frequency range.

Sales Training System on Tape

Sales managers are offered a brochure describing Close Productions' "Sales Training Tape-of-the-Month Club". This program enables sales personnel to improve their own selling techniques by individual self-help instruction while sales managers receive month-by-month reports on the salesman's progress.

This concept for motivating and training salesmen is based on cas-

sette tapes which are mailed each month, "Quick Quiz Cards", professional grading of the cards and monthly reports. The sales manager builds his own program from a selection of more than 140 tapes. *Close Productions, Inc.*

what has
yellow wings,
weighs
29 lbs.
costs \$342.00,
and shines
around
the world?

Colortran's Mini-Pro Kit!

It features three of our versatile, rugged Mini-Pro lights. Draws only fifteen amps at 120 volts. Plug them into any household circuit. Use them anyplace in the world (30, 120, or 220 volt lamps available).

Then we've included three of Colortran's new Pro-Stands. They have the exclusive extendable base legs for positive stability.

What's more there are two barndoors, a set of scrims, one 25' extension cable, a handle, and three 600 watt, 3200°K lamps.

All of this packs into a rugged carrying case, weighing just 29 lbs., only \$342.00.

The yellow wings?
We were
only kidding.

Analytical Features Now Available for 35mm Cinefilm

An analytical projector for 35mm cinefilm features "flickerless" slow motion, stop motion and instantaneous reverse. It is cart-mounted for portability. In projection, the lid is closed and the image, emerging through the glass window, is transferred to the screen by a system of mirrors.

Currents

TWA's "Nzuri" Wins Sunset Magazine Film Festival

TWA's East Africa film entry *Nzuri* barely beat the South Africa Tourist Organization's *The Peace Game* to win the 1971 Sunset Magazine Travel Film Festival.

Held in conjunction with and co-sponsored by H. Werner Buck's Sports, Vacation & Recreational Vehicle Show in Anaheim, the festival drew 112 entries this year representing 40 countries.

Other winners in the competition included *Utah Color*, produced by the Utah Travel Council in the government agency category; *The Peace Game* produced by John de Silva in the foreign destination category; *The Wonderful World of Ohio* produced by The Film Group for Ohio Bell Telephone in the domestic travel category; *World Cup Skiing*, produced by Canada's Chetwynd Films Ltd., in the outdoor recreation cate-

gory; and *A Way Out*, produced by Warren Miller Productions for Revcon, Inc. in the recreational vehicle category.

Nzuri, produced by Summit Films of Denver, promotes travel to East Africa. *Nzuri* is actually a Swahili word for beautiful, used in the film to describe the whole of East Africa.

Holt, Ealing Sign Joint A-V Product Marketing Pact

Holt, Rinehart and Winston, Inc., and The Ealing Corporation have agreed to the distribution in the U.S. and Canada of the Ealing audiovisual product lines by Holt and the distribution of certain Holt products by Ealing in other parts of the world.

The agreement joins the world's leading library of 8mm short films for schools with Holt's fast growing line of A-V material, part of one of the largest non-book product lines in publishing.

Both companies expect substantial sales increases as a result of the agreement, which also calls for future joint development of new A-V products.

Acme Film Labs Installs Improved Transfer Process

A new film transfer process, called Acmechromatek, which improves resolution fifteen to twenty percent, as well as causing a reduction in video noise level, has been put into operation at Acme Film and Videotape Laboratories, Inc., Hollywood, California.

The new unit, an electronic innovation for color as well as black and white film transfer processing, attaches to film recording units.

Mel Sawelson, Acme President, reported that there will be no extra charge for the use of the new unit and Acme will continue to give the same normal services.

Edutronics Forms "Custom" A-V Program Division

Edutronics Systems International, Inc., has formed a Custom Production division to specialize in producing audiovisual packages for

companies and organizations with specific instructional, training or educational requirements.

Heading the new division is Robert L. Hyskell, formerly with Walt Disney Studios where he helped pro-

duce *101 Dalmations*, *Sleeping Beauty*, *Our Friend the Atom* and *Man in Flight*. He also was previously a vice president at EMC Corporation.

Agfa-Gevaert Opens New Glendale (Cal.) Lab

More than 250 guests attended the recent open house marking the opening of Agfa-Gevaert's west coast lab at 1049 Flower St. in Glendale, California.

The opening of the new processing facility marks a significant expansion for Agfa-Gevaert, whose east coast facilities are located in Flushing, N.Y. The 20,000 sq. ft. modern building is located in Glendale's Grand Central Industrial Park.

Manager of the new plant is Rudy Celano, formerly at the Flushing plant. The new plant will process both Agfacolor color print and Agfachrome CT18 slide films.

Put a professional in your projection room

The new Norelco FP-16mm projector brings big theatre performance to any auditorium because it's built to the same rugged standards of performance demanded by professional motion picture theatres. Provides a brighter, clearer, steadier screen image.

Lots of other features, too:

- Packs a 2½ hour film on one reel
- Available with 9 different Norelco lenses including new zoom lens
- Uses Xenon or carbon arc light sources—or can be purchased with 500 W. ozone-free Xenon lamp house
- Optical or magnetic sound
- Runs forward and reverse
- Adapts to automatic operation and remote control

MANHATTAN HAS EVERYTHING

you'll find in any film/sound studio in the U.S., but...

MANHATTAN HAS MORE!!

✓ Check and Compare!!!

✓ MANHATTAN'S TWO Award-winning Magna Tech Electronic POST SYNC SYSTEMS . . . the first and the most in the U.S.A.

✓ "KEPEX" . . . another MANHATTAN "first" . . . to reduce or eliminate leakage and other unwanted background sounds from your soundtrack.

✓ DUAL 35mm PROJECTION . . . with Xenon lamps, solenoid back-up gates . . . and the capability of continuous projection with 8-track interlock on each machine.

✓ THREE acoustically perfect matched ISOLATION BOOTHS for perfect voice recording.

✓ 35mm FOUR-TRACK RECORDING and PLAYBACK.

✓ Transfer and Mix of 25-frame — 50 cycle recordings to 60 cycle . . . and vice versa.

✓ Composite and interlock PROJECTION — 16mm and 35mm in every studio.

✓ Forward and Reverse REMOTE CONTROL from every CONSOLE.

✓ PICKUP RECORDING . . . 35mm and 16mm . . . also 16mm EDGE TRACK and CENTER TRACK recording.

✓ LIMOUSINE or Taxi Service to and from studio.

Then, of course, there's the "PAD" . . . and the miracle of "SONDOR"!

Shouldn't you be using MANHATTAN SOUND?

Our plastic reels, cans and cases all landed major Hollywood roles.

(And our brother-in-law isn't even a producer.)

A number of major Hollywood studios are using Plio-Magic plastic reels, cans and cases. Almost exclusively.

Why? Because our Plio-Magic plastic protects better than metal. Highly resilient, it can withstand impact that metal can't. There's no bending. No denting. No damaged film.

Hollywood liked that.

They also liked our four positive locks. To keep the cases securely closed. And our foam packing. To keep the reels from rattling.

Hollywood, you might say, has gone plastic. Can the rest of the country be far behind?

We make a complete line of quality accessories for film handling. Write us for our catalog.

Plastic Reel Corporation of America,
640 So. Commercial Ave., Carlstadt, N.J. 07072.

PLIO-MAGIC®

Someday, you'll wind up with plastic.

Holiday Inn chain burgeons and with it audio-visual use

We operate 30 of the busiest loan offices in America.

Just check the records. Last year we made over a million loans all over the country.

In fact, the way these men, women, and children borrow from us every year, you'd think our loans were free.

And you'd be right.

Because Modern specializes in loaning films. Business sponsored films. And we do more of it than anybody else in the world.

Our success didn't happen by accident. We know that the easier we make it for people to see your film, the more people are going to see it. So we operate the largest number of film libraries. Thirty of them in key urban areas that are within easy access of 80 million people.

What does this do for your film? It helps it

circulate faster to business and community organizations, schools, women's groups, resort airports — whichever audiences you want to reach with your message. Result: you get

much more exposure for your dollar.

Want to know more? Call one of our friendly sales offices. Their advice won't cost you a penny.

New Eclair ACL: half the size and half the weight!

Sync sound and silent running in a camera that weighs 8½ pounds and is less than a foot long.

When Nelson has made a short documentary film with an ACL. "In the past, I've always looked around for a place to rest the camera between shots," says Mr. Nelson. "But with this new one, I found it didn't occur to me to put it down."

With its 200 foot magazine and without a lens, the ACL weighs less than 9 pounds and measures 11½ inches from front to back. Half the size of its competitors. Less than half the weight.

This is the most inconspicuous camera on the market. It's completely silent, of course. Hand-held, it's much smaller and lower than your head, as you can see. The bat-

tery weighs about a pound and fits into your pocket.

And the ACL is *fast*. You can change its clip-on magazine in less than five seconds. No threading; no need to touch the film at all. Film maker Eric Saarinen says: "This is the first silent camera that you can run with."

The ACL has a crystal-control motor. Sync sound with no connection whatever between camera and tape recorder. Fantastic accuracy. Sync error is less than ½ frame in one *continuous* 200 foot take. That's 8,000 frames.

What else? A universal lens mount that lets you use any lens

with any mount. Extremely bright and precise reflex viewing, with a viewfinder that rotates 360 degrees. And a price that's considerably lower than the competition.

For more information, ask us for our free ACL brochure.

How to project a better sales picture in 1971.

Let your salesmen carry the Bohn Benton Institor; an elegant, rear screen, Super 8, sound and motion picture projector.

It's light, only 17 pounds.

It's simple to operate. In less than 30 seconds, you can have it set up and running in broad daylight.

It's cartridge loaded. There's no film threading.

It's an attache case. Easy to carry. Just 4-inches wide.

And it's sensibly priced. \$300 for single units. Or as low as \$240 in quantities.

The Bohn Benton Institor. You'll be sold on the way it sells.

Bohn Benton Inc.
110 Roosevelt Avenue
Mineola, N.Y. 11501

MICHELLE BENDER

WE ARE IMPRESSED by the striking parallel that exists in the audio-visual trends of both education and industry business, despite the sentiment of some in the audio-visual fields, that because business and industrial audio-visual sales volume is currently surpassing that of education, only the former is "where it's at" for audio-visuals. Judging from broader trends, we do not believe the situation is so narrow in scope.

It is true that business may use audio-visuals in more varied applications than education—point-of-purchase displays, sales presentations, in-house closed circuit videotape systems for meetings (although lectures and programs in schools are also given this way), public relations and promotional films, to name just a few.

However, it is also true that the role of audio-visuals in both areas are similar—to inform, to influence, to educate; and the needs are similar—to communicate information in a graphic attention-keeping way, and to store and retrieve it easily. Accordingly, the trends of business and industry audio-visual applications are reflected in those of education, and vice-versa.

The parallels were quite noticeable at the American Educational Communications and Technology Convention in Philadelphia recently (see page 22 for wrap-up report). Film and videotape, for example, are still vying for dominance in usage, and the problems of standardization exist for both industry and education.

Another illustration is the growing strength of super-8, as sight and sound cartridges become widely utilized. Business is using them for sales presentations and employee training, while education uses them for individualized student instruction. Super-8 is also widely used in filmmaking courses, but 16 mm is still the film format most prevalent for both educational and industrial motion pictures.

Even the contents of some films indicate a sort of overlap in the business and education communities' applications of audio-visual. Recently, as judge for films competing in the semi-finals of an industrial film fair, we saw cinematic techniques and experimental approaches that could rival those of the most avant-garde educational or general interest filmmaker.

The relationship of the business/industrial film and the educational/general interest film is a bit like that of the chicken and the egg. Chronological order is unimportant, but the close kinship—in equipment trends, in problems and sometimes, in cinematic approach—should not be underestimated.

Feedback

BUSINESS SCREEN IDENTIFIES Howard Zuckerman, author of "Videotape Cassettes: the end of the beginning" (Feb. 1971) as "an outspoken missionary of videotape in all its diverse forms."

The description is apt. His article reminds me of nothing so much as a tub-thumping evangelist on the hallelujah circuit warning the great unwashed that they had better be saved before it is too late.

But let's slow down the flow of rhetoric long enough to analyze some of the unqualified assertions about the glories of videotape vis-à-vis what is portrayed as an all-but-forgotten medium, motion picture film.

The article predicts that videotape will replace chemical photography in many of its basic applications on a widespread scale within three to five years. This claim has been flying about for at least ten or twelve years. I remember being warned against buying a film camera in 1962 because it would soon be obsolete. Hundreds of thousands

of feet later, it was traded in on a new camera—again, I'm afraid, an obsolescent film camera.

Let's put the prediction of the demise of films down for a call-up in February, 1974, and again in 1976. To be on the safe side, let's put it down for 1980.

The article states that everything done in magazines can be done right now with videotape. I don't quite know what that means or what its significance might be, but how about comparing videotape not with magazines (or hieroglyphics) but with a comparable method of communication, films.

I recently completed an industrial documentary on the subject of solid waste disposal. It was filmed at fifteen locations in ten states in ten shooting days, including travel, by one cameraman, with three additional locations covered by others.

Could that have been done using videotape? Not done well or inexpensively—just done?

Proponents of videotape talk of speed in processing. But how about

the speed of transporting a color videocamera and recorder up a narrow ladder to the top of a five-story copper reduction facility in Utah, then onto an airplane and into the seat of a bulldozer at a Los Angeles landfill on the same day?

They talk of economy. Having worked in both the videotape and film media, I find that, when all costs are taken into account, the advantages are on the side of film.

The article mentions "computerized editing . . . a simple one-push-of-the-button affair." Beautiful. After the crew returns with the tapes from fifteen locations, I'd love to see which magic button is pressed to put all the bits and pieces in the proper sequence.

As for the market for videotapes, many persons seem to share a dream in which Americans will pay billions of dollars to have little program gems all their own to play over and over again on their own TV sets (equipped with a tape playback costing more than a 16 mm film projector).

I would ask: what shows are so desirable that they can generate that kind of market?

Getting back to that film on solid waste disposal, it is now being distributed (fifty prints) to television stations for public service showings. Track records for the *Industry on Parade* series of which it is a part indicate about 200 showings may be expected. Two hundred showings on TV, then unlimited circulation to clubs, schools and other non-theatrical outlets.

Can the cassette people offer something better? What are their outlets? Which type of playback equipment is universally available? What specifically are the costs? In short, just how do I distribute my industrial via videotape to achieve results better than those that can be had with film? I don't want to hear about future possibilities—this film has to be distributed now.

Arthur Lodge
Chappaqua, N.Y.

Editor's note: Mr. Lodge is an independent film producer. Next month, we will carry Mr. Zuckerman's reply.

PLAN NOW TO BE "ON LOCATION" FOR ONE OF THE . . .

1971 FILM PRODUCTION WORKSHOPS

. . . IN THE GIANT REDWOODS OF NORTHERN CALIFORNIA

THE ONLY INTENSIVE TWO-WEEK COURSE IN PROFESSIONAL FILM MAKING — TAUGHT BY PROFESSIONAL PRODUCERS, DIRECTORS, CAMERAMEN, SOUNDMEN AND EDITORS.

A "hands on" course where students "learn by doing" — working with professional production equipment under the close guidance of experienced film makers.

CINEMATOGRAPHY, SOUND RECORDING, LIGHTING, EDITING, DIRECTION for all types of 16mm films: Television, Educational, Industrial, Travel, Documentary, etc.

12 days, 10 hours of training each day — 120 total hours. All equipment, film, room and board included in the low tuition fee.

TWO WORKSHOPS THIS YEAR: JUNE 1-13 AND SEPT. 8-20, 1971. TOTAL COST: \$495.00. Write or phone for details and application information. Film Production Workshop, CAMP LOMA MAR, LOMA MAR, ALB. 24621. Phone: 415-879-8710.

Film Scholarships Offered

Six scholarships to encourage students in the pursuit of careers in film production, writing, teaching, history, aesthetics, or criticism will be awarded by the University Film Association in August, 1971. Winners will be chosen on the basis of film or written work submitted. Information may be obtained from Professor Howard Suber, UCLA Motion Picture Division, Los Angeles, Calif. 90024.

St. Louis Firefighters Use A/V to Win Pay Increase

In an effort to win equal pay with city police officers, fire fighters in St. Louis sought public support through all communication forms, but the most unique was a 23-minute sound/slide presentation. Brought to hundreds of public meetings, the presentation was placed also in neighborhood taverns throughout the city. The campaign was successful.

Skyjack Detection Devices Do Not Harm Film

Screening devices used by some United States carriers for detecting potential skyjackers will not adversely affect raw or exposed photographic film, according to Mason R. Maddux, manager of security for United Airlines. The SD-2 Surveillance System (magnetometer) used by the airline operates on a low magnetic field and is incapable of erasing or damaging films. He added that x-ray and sound wave screening equipment may be harmful, but is not used by airlines in the United States.

USC Gets Historic Motion Picture Devices

The University of Southern California Performing Arts Library has recently acquired the Mervyn LeRoy-Sol Lesser collections of historic motion picture devices. Included are early examples of the "magic lantern" projectors, professional and amateur motion picture cameras and home projection devices.

Ad Agency Liable In Bootleg Record Case

In a recent decision, a U.S. District court in New York recently ruled that an advertising agency can be held liable for royalties due music publishers if a client is found guilty of bootlegging musical recordings. It also held that radio stations carrying advertising for bootleg products and mailing houses that distribute them can be held responsible under the copyright law.

AFI Receives Ford Grant

The American Film Institute has announced receipt of a matching grant of \$800,000 from the Ford Foundation towards support of the Center for Advanced Film Studies. The grant is for two years ending June 30, 1972.

AAVS Celebrates Anniversary

The Aerospace Audio-Visual Service, with headquarters at Norton Air Force Base in California, recently celebrated its 20th anniversary. The AAVS has 41 units throughout the United States, South America, Europe and Asia, and provides professional products and services to the United States Air Force and Department of Defense agencies.

Fortune Offers Features on Audio Cassettes

A continuing monthly seminar that explores problems and opportunities confronting American businessmen is being offered on cassette tapes from Fortune Magazine. Each month, conversations with executives, consultants and economists cover topics of inflation, interest rates, specific industry problems, new products and processes. The series is available on an annual subscription basis for \$80.

We've taken audio/visuals out of the dark ages.

Remember where automotive transportation was before the Model T Ford came along?

That's where audio/visual communication was.

Until today.

Until the RCS MODule System.

A pocket-size cartridge that holds up to half an hour of MotionStrip™ pictures and sound, together. With a format fit for every program.

Plus a portable projector—with its own TV-size screen—that also provides wall-size images, operates completely automatically, or stops whenever you want it to.

They add up to the most compact sound/film cartridge and projector you can find. Anywhere.

Some of its features have existed for years, scattered among many different systems—so many, in fact that few people could afford to make full use of audio/visuals.

But we've put it all together. And we've done it so skillfully that we can sell it at half the price of any comparable system.

Any library of materials can be converted to our cartridge format. Already, RCS has gathered rights to the largest sound/film library in the world.

In business and industry, the RCS MODule System is usable for sales presentations, for displays in retail locations and at trade shows, for employee training and recruitment programs.

In education, the low cost, efficiency and versatility of our system make it ideal for individual use, for large group instruction in classrooms, for teaching crafts and hobbies, and for pre-school and adult education in the home.

A system every producer can program for—a system everyone can afford.

the rcs module system™

A-V TAKES A HOLIDAY

Exclusive Business Screen Report
by Ott Coelln

Holiday Inn chain burgeons . . .

Sight and sound a primary asset . . .

A-V used in many ways

IF SHEER GROWTH were the only standard by which the Holiday Inns International System be measured, business analysts would agree that this worldwide motor hotel operation is a smashing success.

On August 1, 1952, the first Holiday Inn opened its doors in Memphis, Tenn.; within less than 19 years, the system has grown to 1,292 inns, as of March, 1971. Nearly 190,000 guest rooms are available to business and vacationing travelers, and the future goal calls for 3,000 inns with 400,000 guests' accommodation by 1990.

"The name Holiday Inn means a low-flung two-story brick building on an Interstate Highway, a high-rise complex in large urban centers, or simply a happy family vacation," comments founder-board-chairman Kemmons Wilson.

The vision of a better place to enjoy an overnight stop enroute brought about the first inn in Memphis. Today, that vision has been realized in each of the 50 United States, Canada, Mexico, and far beyond in Africa, Australia, Central and South America, the Middle East, Pacific islands, and 19 countries of Europe.

The Holiday Inn story, however, is much more than physical assets. If there were a secret ingredient for its evident success, it would not appear on a balance sheet. It is management's relentless and undeviating adherence to its "first principle".

Technological and economic resources, organization and structure, innovation and timing are transcended by the unity of an organization whose individuals believe strongly in its basic precepts and faithfully carry them out.

Instilling that belief and faith, while employee totals are constantly increasing and growth continues, is a task that really challenges those using the communication media. How Holiday Inn has accomplished this goal and what the company plans for tomorrow are discussed on the following pages.

A-V TAKES A HOLIDAY

■ "God was smart when he made man. He made four holes in the head for information to go in, and only one for it to come out."

With that observation, Wallace Johnson, Vice-chairman of the Holiday Inn chain, comments on his company's success. "I think we have a way of communicating . . . that has been one of the reasons for our success. We have been able to communicate with the people working for us, and to communicate to those we work with."

How does Holiday Inn's management reach nearly 108,000 employees around the globe? How does it instill among the 20,000 people on its home office payrolls the company philosophy of sound assured guest comfort and convenience, and a belief in fair play and the profit motivation? This challenge of communication is being met by a far-reaching concept of total education/training responsibility exemplified in the current construction of the \$4 million Holiday Inn University.

Scheduled for completion on its 150-acre site nine miles south of Memphis early next year, the university facilities include two resident halls of 206 dorm rooms, six lecture rooms, four seminar classrooms, and an amphitheatre that accommo-

A-V director Eugart Yerian (left) is glimpsed "on the move" as he checks out a recent promotional assignment.

dates 200 people. The administration building will provide offices for operating and instructional staffs, and house a 10,000-volume corporate library, reception and conference facilities. All classrooms, lecture halls and dorm rooms are being interconnected by closed-circuit television.

This major educational facility is comparable to those of other industry leaders—General Motors and IBM, with training centers, and Pepsi-Cola with a management institute. Its construction emphasizes Holiday Inn's goal: to provide adequate training for all types of Holi-

day Inn people, from the franchise holder to the yard man.

"We have long realized as one of our greatest challenges, the satisfactory procurement, motivation and education of all employees to serve our customers," comments board chairman, Kemmons Wilson. . . . "We are greatly concerned about developing their skills and building a good Holiday Inn attitude."

In this frame of reference and within the university structure, Eugart Yerian, the Inns' assistant vice president and director of audio visual communications, serves the entire system. The former director of the Memphis Little Theatre (for 21 years) joined the company in the early 1960's when the parent company had only 135 home office employees and fewer than 150 inns. He remembers those first informal months well, having been hired to free lance Holiday Inn's first film strip, *Welcome Cousin*.

Its overwhelming success launched Yerian into a new career typified by Kemmons Wilson's comment at the time, "Oh, yes, you're also the official photographer for us."

Yerian is still the "official photographer," but Holiday Inn's audio visual communications department now has a staff of 22 who research, write, illustrate and photograph process and produce the extremely wide range of media tools needed.

H.I. President William B. Walton is at the rostrum as rear-screen above him shows data at a recent national conference.

for every kind of conference, meeting, training and related communications responsibilities. Audio-visual communications have become a truly total corporate service facility.

"It has grown around the abilities of our people to accept whatever came their way," says Yerian.

That might well be a credo for any corporate audio-visual facility. At Holiday City, the company's 10-acre headquarters complex in Memphis, the phrase "whatever came their way" covers a lot of territory.

Basic among Holiday Inn's audio-visual activities are the sound filmstrips for training company personnel regarding specific facilities and services. Currently, 35 of these programs are in the audio-visual li-

ford, Conn. Pressings of sound discs which accompany each program (except those taped for overseas use or for other LaBelle users) are made by Plastic Products, a company associated with the Holiday Inn system.

Sound motion pictures, with a wide range of topics, are another basic audio-visual tool used by Holiday Inn. *At Your Command*, for instance, is a 30-minute sound/color film which interprets the nationwide Holidex Reservation System and its computer-center in Memphis. It backstops a training manual and recording on this subject. *Man Alive* is a BBC documentary on the men who pioneered Holiday Inns.

Many special motion pictures are

Production studio of A-V communications at Holiday City where all types of audio-visual media are created to serve training and meeting needs for 1,292 Inns.

raries, that are mandatory at every Inn. Throughout the year, new subjects and titles are added. They include such diverse content as job preparation for waitresses, (*You Are the Star*) and *Care and Control of Swimming Pools*.

In most U. S. and Canadian Inns, DuKane and "Micromatic" sound filmstrip projectors handle the showings; optional for inn management purchase (and also widely used) are LaBelle "Tutor 16" projectors with slip-in Compax tape cartridges. These have been especially useful for taped-sound versions produced in dozens of tongues for overseas inns, from scripts translated and recorded right at Holiday City.

Processing and duplication of the more than 1,500 copies of each new Holiday Inn filmstrip release is done by Color Film Corporation, Stam-

ford, Conn. Pressings of sound discs which accompany each program (except those taped for overseas use or for other LaBelle users) are made by Plastic Products, a company associated with the Holiday Inn system.

All extensive 16 mm motion picture editing, dubbing and printing for Holiday Inn is done by Motion Picture Laboratories in Memphis. Yerian attributes "extremely satisfying results" to Frank McGeary and his associates there.

Preparation of all kinds of sight and sound tools for Holiday Inn convention and meeting use is an important responsibility of the audio-visual communications depart-

At right: sequence from two of the 35 sound filmstrips currently in the training libraries of Holiday Inns.

A-V TAKES A HOLIDAY

ment. Films, charts, slides and recordings help make such events as the national Franchise Holders' Conference—an annual affair at Memphis—and the six or more conferences for inn-keepers more effective.

Material for the three traveling field training crews (of ten persons each) is also an audio-visual responsibility. The department's schedule includes media and material for resident training at Holiday City, which all inn-keepers must attend, but is optional for restaurant managers.

Finally, there are special tools serving inn hosts, who typify Holiday Inn's emphasis on maintaining standards of courtesy, comfort and convenience at every inn. These hosts serve as roving trouble-shooters and public relations representatives, as well as official "greeters."

On occasion, the audio-visual department has been involved in company decision making. To illustrate, the Operating Division requested a film about credit cards. The audio-visual department, believing in "the right tool for the right job," recommended that the task of informing and keeping inn employees aware of key points would be more effectively accomplished with a large brochure to be kept behind each inn desk.

"So it fell to our lot to design, write and get the brochure printed," remembers audio-visual chief Yerian.

Every Monday morning, Holiday

A-V communications' crew at work during recent Holiday Inn's national conference where motion pictures, filmstrips and tapes were among audiovisuals used

Inn's Executive Committee meets at Holiday City. Meeting its presentation requirements may entail preparing maps or altered sections of maps, charts and other tools to visualize information. The audio-visual department prepares these aids for top management people who want facts "put before them quickly, clearly, and concisely" as the use of visuals can accomplish, reports Yerian.

The "official photographer" role is now all-encompassing. Holiday Inn's photographic personnel have a busy schedule—from ordinary requests for ID and passport photos, to daily requests for news service and VIP photos for publication in the world's newspapers and magazines, as well as in *Holiday City Times*. Architectural photography has also come to the forefront to

"show innkeepers the facilities at other inns and to demonstrate the outlook for prospective franchise holders."

The range of assignments using a combination of photos, art and special design has burgeoned. One recent assignment was a large-scale pictorial menu card that visualized (in color) dishes created by a famous chef. The cards were to serve as examples to local inn chefs for emulation of the fare.

Sound recording activities are "special" too at Holiday Inn. The audio-visual department's top-quality Ampex and other recording equipment provide all tapes of background music for players throughout the inn system.

In addition, the department has set up and currently directs the "Dolly Holiday" nighttime radio

Multi-media presentation at typical Holiday Inn's national conference requires well-trained staff of technicians.

music show, which is programmed into markets throughout the United States. The scope of this program is indicated by its millions of nightly listeners, who are offered a full five hours of classical/popular music 365 days of the year.

The audio-visual department's sound engineers, along with Yerian, are helping to design public address systems for the inns. Recently, they shipped equipment to five locations at once.

The division chief has reached back into his long years of theatrical production experience to design stage lighting and controls for various inns. Lighting apparatus recently was shipped from Memphis, to inns in California and Rochester, N.Y.

"We get more nearly what they need, and put it together less expensively," explains Yerian.

He muses, "As you sit inside this organization and watch it blossom, you realize that this whole A-V operation is based on a kind of common sense approach to problems as they come along . . . and thus, we contribute to our worldwide growth in our own way."

But these audio-visual people aren't sitting on their laurels. They know that the tools being produced must accomplish results.

Accordingly, they sponsored a recent mail test of training film users; examinations devised on a typical subject were accepted by 19 of the first 20 inns contacted. The results showed genuine understanding of the basic material.

Comparable future testing will be done by Holiday University personnel. Carman Robinson, the company's vice president for education and training is the operating chief of Holiday Inn University, and Dr. Andrew Holt, retired president of the University of Tennessee, is chancellor/educational consultant.

Nearly all that has been discussed is only a prelude to Holiday Inn's acceptance of the role of communication, and has related largely to its internal usage—serving personnel training and convention/conference groups. Still other and vastly important sides to this communication story are the external aspects—meeting facilities available at each of the 1300 worldwide inns—and the far-reaching potential of the

A-V communications sound engineer and staff busily check plans for new \$200,000 color television studio being built for Holiday City University.

190,000 guest rooms already in occupancy, or soon to be occupied.

The audio-visual department, preparing to meet these challenges, already has a Holiday City television facility moving well along. In addition, it is active in making the Holiday Inn's meeting facilities as nearly perfect as possible. The 1300 DuKane and LaBelle sound film-strip projectors used for training are also available for external meeting use. A DaLite screen is available at every inn, along with chalkboards, lecterns and public address systems with extra microphones inputs for speakers.

Standardized meeting facilities provide business leaders with a unique, fairly complete, dependable, and extremely convenient and economical site to schedule meetings. International needs have been met through the taped-sound filmstrip

equipment present in every overseas establishment.

By extremely simple electronic magic, the 190,000 television sets in each inn guestroom can receive videotaped packaged programming fed from the front desk through closed channels. The size of the Holiday Inn potential is reflected in the recent order for an additional 40,000 Motorola color television sets. These were acquired by Holiday headquarters' contract sales department to help complete the company's changeover from monochrome.

Discussions are in progress for the sponsored use of this unique influential audience through videotaped programming. In addition, there are implications for EVR application throughout the domestic United States and Canadian segments of the system.

Among other sight and sound tools, Holiday Inn uses this production, projection and reproduction equipment:

- * 16 mm Grafflex mazda and arc projectors are in constant use for meetings and conventions.
- * Kodak Ektagraphic slide projectors serve that medium.
- * DuKane and LaBelle sound film-strip equipment are described as "standards" for field training use and in local meeting rooms.
- * Spindler & Sapppe dissolve controls are used in all major meeting programming.
- * Kni-Tron Xenon arc slide projectors are also favored.
- * DaLite screens hang in nearly every inn meeting room.
- * The Ampli-Vox lectern is another "standard."
- * Shure 565-S and Model 330 microphones, plus Shure microphone mixers are also Audio-Visual Division favorites, along with
- * AKG 202 mikes and EV 647 lavaliere types.
- * The Turner 251 paging microphone is widely-used, backstopped by
- * Rauland 35 amplifiers and 10W amplifiers (with mike mixer).
- * University sound columns and
- * McIntosh "275" amplifiers crop up for conference and convention use.
- * Altec and Bell portable speakers are used.
- * CPE's large (9'x12') rear screen is used at all headquarter meetings.

A-V TAKES A HOLIDAY

The traditional entertainment movie has not been overlooked by Holiday Inn. Automated theatres have been contracted for installation at a number of locations. Some of the Florida-based inns show two-reelers in their lounges; others run a babysitting service using films for the younger set, shown in the well-equipped meeting rooms.

Indeed, the future of audio-visuals is bright at Holiday Inn; thirty or more subsidiary companies are headquartered at Holiday City. They are represented in part by the multi-storied Institutional Mart of America, a virtual "treasure house" of furnishings and equipment used by Holiday Inn, and other hotel and motel builders, hospitals, nursing homes, college dormitories, apartment structures and other institutional buildings.

Holiday City extends far beyond its Memphis boundaries, as component divisions include a carpet mill

at Phoenix City, Holiday Industries at Hernando, Miss., King Cotton Meat Products in Memphis, Artes de Mexico, headquartered in Mexico City, and many others.

"Their operations are also related to the kinds of things we are doing," says Yerian.

Yes, growth has to be an important factor. When a system with the scope of Holiday Inn expands at the rate of two or three new inn openings each week—from 150 inns in the early 1960's to nearly 1,300 by 1971—somebody has to be both farsighted and flexible.

Through its present wide-ranging search for the best of the new audio-visual tools for a better job of communication, Holiday Inn's audio-visual department at Holiday City constantly reviews and tests new equipment. It gives high marks to the potential of EVR for cassette programming of company instructional material, as well as for guest-room use. (See box, page 17, for some of Holiday Inn's favorite pro-

Computer-operated drafting machine shown drawing a room layout, is used to design the many hundreds of meeting rooms now available—worldwide.

duction, projection and sound reproduction tools.)

To the person with the audio-visual administrative responsibilities in his own company, there's food for thought in Eugart Yerian's words

Eugart Yerian (left) discusses an art job with Holiday press art director Dev Kinney and one of field salesmen.

A-V art director Fred Peterson, who brought a lifetime of experience to this growing audio-visual activity.

concerning how he tries to do his job.

"This A-V setup grew out of the now-how available to it," he says. All sorts of experience can apply to help you do that job a little better."

He summarizes his own background, "I had early background as a chemical engineer, veered over to theater and theatrical production, but meanwhile had grown up in the building business. My first job entailed teaching math in Los Angeles high schools. I wrote for the school papers and earned my way through college as an embryo architect . . . All of these experiences have helped me to encourage our A-V people to take on almost everything that comes our way.

"Management, when reviewing our activities when we were gathered under the Holiday Inn University 'umbrella' was frankly astounded at the scope of some of the things we have been asked to do. This involved such items as our picture-framing facility and our helping the Architectural Division with its meeting room designs. I thought we had a pretty good answer.

"People wander down our way trying to get their work done and we have developed a reputation around this place 'if you can't get it anywhere else, try the A-V department. That once included a fellow who just needed a 2' x 4' board, eight-feet long, which he got from us, naturally."

Holiday Inn's president William H. Walton puts the A-V Division's primary responsibility into closer focus:

"The Audio-Visual Division is an invaluable asset to our company. By viewing their training films, our personnel at all of the Inns can really know what we expect of them. In turn, the traveler is assured of consistently good service at any Holiday Inn, anywhere in the world."

presentation controls at Lectern are typical of those which aid meeting leaders at nearly 1,300 Holiday Inns . . .

Ready to serve sales and other meeting-site requirements throughout the world at more than 1,292 Holiday Inns are typical facilities pictured on this page.

All Holiday Inn meeting rooms are equipped to show many types of audio-visuals.

Video keeps romancing audiovisual users. At AECT Show, Panasonic sported its new deluxe studio monitor with horizontal resolution greater than 600 lines.

The threat of video as a business screen A-V tool has sparked new competition for the full spectrum of audiovisual beneficiaries . . . the users.

A-V: The battle grows

Projectors keep in the competitive arena with innovations such as this Singer Graflex Instaload 16. Orange dots mark channel for film easing loading.

Rear view self-contained projector units are getting a new lift from units such as the RCS MODule system featuring cartridge film and sound tape in one unit fully synchronized.

Arm chair television viewing is possible with this unit built into a futuristic chair. The goal is personalized training in livingroom comfort.

ROOM FOR ALL...

More innovations give projectors a reason to grow. This 35mm unit from Buhl features "superwide" short-throw lens.

Portable electronic classroom features versatility and economy from Visual Educom Inc. Unit allows individualized instruction to many students.

Video tape-to-film transfers are growing in demand. Video Tran showed results of such transfers offered by its system using 3M electron beam equipment.

A-V: THE BATTLE GROWS

The audio-visual industry has almost doubled in volume in the past decade rocketing from \$600 million in the early sixties to almost \$1.3 billion last year, according to Hope Inc., consultants for the industry.

Volume includes that generated from industry, business and education combined. According to Hope Reports, business and industry audio-visual volume gains are outdistancing education, accounting for more than 30 percent of the total volume. Hope predicts that the trend to business use of audio-visual will continue to grow at a faster rate than education. However, both will show gains in the '70's.

His predictions are based on many factors, but one of the most interesting is the upsurge of audio-visual installations in skyscraper buildings being constructed. As illustration, Sears will build the

Everything in one is feature of this Dolly-Lite tv unit with camera, monitor, mike mountings, videotape recorder and accessories. Completely portable.

*Wrap-up of AECT Show in Philadelphia
Trends and Directions for A/V*

tallest retailer headquarters building in Chicago, equipped from top to bottom on every floor to accommodate audio-visual equipment. Several other buildings of large size are treating audio-visual in the same manner.

Meanwhile, education is not standing still as the audio-visual boom continues to generate new interest. At the recent Educational Communications and Technology National Convention, Philadelphia's Civic Center, convention goers displayed keen interest and enthusiasm over the new developments in audio-visual and its applications to education.

Although the number of exhibitors at the show seemed smaller than the year before, crowds were just as great—almost elbow-to-elbow during peak show times. The trends unfolded at the show run almost parallel to those in business audio-visual in

Enthusiastic crowds at AECT show look for many things beside free films. High on list was new equipment offering versatility at a price.

somewhat different proportions.

- The battle between film and video is intensifying.
- The competition in rear view projectors is growing sharper.
- Front view projectors are beginning to compete head-on with the new developments accented by more flexibility and greater ease of handling.
- Super-eight mm is gaining strength as sight and sound cartridges gain wider use. However, most don't count 16 mm out for a long time to come.
- Miniature audio-visual devices are coming up strong. Even the video tape equipment is joining the trend to miniatures.
- Not to be counted out is the impact of video tape. New models at the show indicate new impetus and versatility.

Despite romance and drama of video tape as an audio-visual means of business and educational communications, most predict its impact will not be felt for some years to come. Standardization, conversions and equipment costs are some of the reasons standing in the way of rapid industry expansion. Regardless, video still draws wide interest at the shows and labs; production firms and distributors are keeping a close watch. One firm that stores and distributes film is already installing tape cartridge conversion equipment to handle the business when it comes.

The problem is not in the software; it's in the hardware. Conversion equipment for existing TV sets must be sold before the software can be moved. Standardization of some sort must be developed to create mass markets, or else conversion equipment must be made available to create flexibility.

At present, video seems at a standstill until these barriers are hurdled. Those who are resisting the immediate influence of video are quick to note that its eventual, though uncertain future, will keep the entire audio-visual field alive and competitive.

With predictions of volume increases during the '70's and a competitive scramble in the marketplace, AV users in both education and industry are certain to benefit. AV equipment will be more flexible and functional.

Miniature rear view projectors operating from tape offer another challenge to video. A-B-Dick is showing these compact units.

A-V: THE BATTLE GROWS

Three screen remains another sharp contender for attention. The Command Performer System on demonstration at the AECT promises computer controls.

Super-8 will be able to perform as many stunts as a circus clown with many equipment makers claiming that motion with Super-8 can be attained at eight frames per second. Some Super-8 film cartridges are now able to convert to several languages, cut out certain portions of a visual presentation, go back, stop action and much more.

The flexibility that can be reached through the newest audio-visual devices is certain to save money in the long run for end users. Film producers will be able to deliver more message in a more effective way utilizing each of the 3600 frames in a 50 foot roll of Super-8, for example.

There's little question that sound and sight cartridge combinations stole the show at the AECT. This is the photo action as BUSINESS SCREEN saw it through its exclusive camera eye.

Another entry in the V.T.R. field is this AKAI unit billed as lightest portable 1/4" video tape recorder. Weighs only 20 pounds; has 3-inch monitor tv.

Ampex unit emphasized the instant feature of its video system. Here it's demonstrated to AECT show-goers.

IFPA CHAPTERS ARE ON THE MOVE

Bill Blume, IFPA Vice-President for PR, Colonel Alterio (Gallerani), Commander AAVS, and Captain Paula Kerns seem to be getting some words of wisdom from Father Emory Tang, St. Francis Productions, and honorary chaplain for IFPA.

That's IFPA President Bob Montague on the monitor giving his 1971 inaugural address in the studios of the Television Division of the Air Force Audio-Visual Center, Norton AFB during recent national board meeting.

The IFPA National Board of Directors and guests in action. L-R in picture Ralph Hall, Jack Smith, Jack West, Phil Newhauser, Mike Rye, Lutz Winkler, Bob Montague, Jackie Stillwell, Mitch Rose, Bill Blume, Dan McGovern, Don Bjoring, Jim Halverston.

Lt. Ken Baehr guides IFPA group in tour of AF Film Depository. Holding amount to 86 million feet of historical film.

National Board Meeting is Keyed by Optimism

The IFPA Board began its 1971 term with an initial meeting held at the Headquarters of the Aerospace Audio-Visual Service at the Air Force Audio-Visual Center, Norton Air Force Base, Calif.

The meeting hosted by the Inland Empire Chapter and its Chairman Col. Don-ell Bjoring, Deputy Chief of Staff for Operations, AAVS.

Returning for a second term as President, Robert Montague of General Dynamics, San Diego wielded the gavel over

a board composed of some holdovers and several new members.

The 1971 slate of officers supporting Montague include: Executive Vice-President Mike Rye, well known narrator; Financial Vice-President Lutz Winkler, Naval Electronics Lab, San Diego, California; Editorial Vice-President Charles MacCrone, Hoxley Inc., Hollister, California; Public relations Vice-President Wilbur T. Blume, Hq AAVS, Norton AFB, California; Membership and Chapters Vice-President West Jack West, Deluxe-General, Hollywood, California; Membership and Chapters Vice-President East Art Rescher, Byron Labs, Washington, D.C.; Recording Secretary Jackie Stillwell, Ralph Hall Productions, Hollywood, California; Past President Mitch Rose, Det 3, AAVS, Los Angeles, California, and Chairman of the Board of Governors Robert S. Scott, Aerospace Corporation, Washington, D.C.

President Bob Montague spoke optimistically about IFPA plans for 1971 from the growth that the organization has experienced in the past year.

A new membership drive is being planned for 1971 leading up to the 12th Annual Conference scheduled for San Diego in October. A regional meeting is also planned in April in connection with Photo Expo in Chicago, where a CINDY Theater will feature Cindy Award Winning films.

The board and other members and guests toured the AAVS facility prior to the Installation Banquet in the evening at the Norton AFB Officers Club, attended by 100. Don Adams of Eastman's Hollywood office performed as Master of Ceremonies and Everett Baker, Senior Producer, Naval Ordinance Test Station, China Lake, California gave a slide presentation on his experiences at Expo 70 in Japan.

Father Emory Tang, St. Francis productions conducted an Audio-Visual invocation with some of his Telespots. Earlier in the day the board named this popular member as Honorary IFPA Chaplain.

Inland Empire member Ray Ussery, AAVS producer added some nostalgic melody to the occasion with his barber shop quartet group. It turned out to be a day of hard work and accomplishment and some good fellowship that promised another year of growth and service for IFPA.

In his inaugural remarks, President Montague prophesied that the day was near when the audio-visual communicator would enjoy the same respect now afforded the most select professions. "Our task," he said, "is to continue to work hard at our professions and deserve the confidence that is placed in us."

Chapter Chatter

BY

WILBUR T. BLUME

Public Relations Vice-President

IFPA Chapters have been active all over the country during the first three months of 1971. Following are a few examples of programs conducted; I think you'll agree they represent great diversity and imagination.

SEATTLE:

This Northwest group got a running start in January with a full evening at the Mercer Island Eastman Facility. The program included several international film festival award winners and a special demonstration of the Eclair ACL Camera.

Jim Friedman, General Sales Manager of the Eclair Corporation of America was on hand to assist local dealer Al Morse with the demonstration. Members rated

this one of their best programs ever, and the enthusiastic crowd stayed on after the meeting for informal discussion.

The February meeting was held jointly with the National Academy of Television Arts and Sciences local chapter members. Following last months look at the Eclair ACL Camera, the newest Arri BL camera was demonstrated by Lee Collins, Western

We Need Public Relations

Designer/film-maker Don Tartak (left) goes over a story board with public relations executive David Simon. In the article, Simon tells how film and public relations people can help each other and do a better job for the client by working together.

By DAVID H. SIMON, President
SIMON/Public Relations, Inc.
Los Angeles, California

Ask many information film people about public relations and they'll tell you it is somebody else's bag; they don't use it, are not involved in it, and don't need to know much about it.

The fact is, though, that they do need to know about it. And depending on how you define it, they are already involved in it. In its broadest sense public relations deals with communications as it relates to all of the various publics of interest to a given corporation; therefore everything the film man turns out, no matter for what audience, is in effect a public relations tool. Whether a report to the military on the status of a contract, a training film for employees, a sales film, or whatever, its object is to influence one or more of the corporation's audiences.

In addition, the industrial film is—in itself—a tool which the public relations expert can use to generate visibility through the press, employees, financial analysts, customers and the plant community.

—For example, a well thought out industrial film is of broad interest to service clubs at a weekly program. And the press will cover such events.

—It can be used as a briefing for visiting financial analysts from brokerage houses. And they may use quotes from the film in their market letters and bulletins to brokers.

—How one company solves a pollution problem might be portrayed on film and shown in other cities to governmental and community leaders. And again, the press will cover such events.

—The making of a film itself should result in a press kit with stills from the movie and where appropriate, it should be distributed to suppliers and customers—who may want to include pictures involving their products in their house organs or press kits.

Thus, whether he reports to the Public Relations Director, the Marketing Manager, or directly to top management, the film man is dealing in public relations.

Furthermore, the free lance film man, or those attached to smaller organizations, may be able to broaden their own horizons and make more substantial contributions

to the firms they serve if they consider incorporating other aspects of public relations in their activities.

One way to do this is to add a PR specialist to an existing staff. But in many cases a more practical way is to utilize the services of a competent outside PR counseling firm with a program specially tailored to your firm's particular needs. Free lancers can offer such services in association with their own by bringing in the PR counsellor when they find a client who needs one. If the PR firm does a good job for the client, it is sure to reflect well on the firm that recommended them.

And there is another, more subtle advantage: since the PR firm deals with the client on a continuing basis over a long period of time, he is likely to know as soon as the client is contemplating the next film—in fact, he may be the one who suggests to the client the need for another film. And when that time comes the PR counsellor is surely going to remember how he happened to get the program in the first place. Thus, although the film man cannot camp on the doorstep of every client he's served in the past, he has a "friend at court" who sees the client on a day-to-day basis—and who will assure that he get first crack at the next film requirement.

For the film man on a company staff bringing in outside counsel may well increase the scope—and the level—of his responsibility, presumably with the ultimate reward of increased title and compensation. And certainly with increased management recognition of his contribution.

Because his scope in communications is broad, the public relations expert may see ways of reworking 10 or 20 percent of film to create a new movie for a completely different audience. And certainly, PR people are adept at getting full mileage out of the film once it is produced by considering such projects as articles and new releases in appropriate magazines and newspapers about the film.

What kinds of activities are involved in a public relations program? There are a many answers as companies since ever good counsellor carefully designs each program to meet the needs of the company. Target audiences can include employees, shareholders and the financial community, customers and potential cus-

Technical Rep. for the Arriflex Company of America. This latest model "APEC" (Arri precision exposure control) and a 12 to 120 zoom with built-in, one-hand operation. Another great program idea for you other program guys!

SAN JOSE:

In February, this chapter in Northern California held a prestigious showing of the Lee Mendelson Film Productions 16mm color film "I'm 17, I'm pregnant and I don't know what to do." The film's producer-director, David Crommie and his wife, Karen who was associate producer participated in a discussion and question and answer session pertaining to the film after the showing.

The film was produced under a grant from the James Irvine Foundation to the Children's Home Society of California and is available to local TV stations for a half-hour showing on public service time.

The film presents with sensitivity and feeling the problems of single girls who have the alternatives of a forced marriage, abortion, or keeping the child versus

adoption. These problems come into sharp focus in a series of confrontations between different girls working out their solutions to the same problem.

Children's Home Society workers and prospective adoptive families portray themselves in the film, while the girls are played by young actresses who developed their characters from actual case situations in the agency's files. Most of the dialogue was improvised.

SAN FRANCISCO:

Also in February the Northern California Chapter held an evening of archives and beer entitled "How To Do Your Own Type Film With Someone Else's Money" as filmmaker Bob Charlton discussed his recent film for the Olympia Breweries. The Pacific Film Archives and curator Sheldon Renan also were hosts for the First meeting of the year held on the campus of the University of California at Berkeley.

Mr. Charlton's film was made for the 75th Anniversary of the Olympia Breweries and "blended" the progress of the company with the historical events of that period. It contains a refreshing approach to the typical documentary and should

add to his list of film honors. Bob was winner in the latest IFPA "Cindy" award with his film entitled "Entertic" made for the Bonneville Power Administration.

Sheldon Renan discussed the Pacific Film Archives' many programs to the public, its role as study center for student and information center for filmmaker. He was followed by a computer film called "Matrix" by John Whitney and the IBM Corporation.

CHICAGO:

The Midwest Chapter ate roast beef at their February dinner meeting and saw McDonald System, Inc., latest training film "New Dimensions." This multiple image production, conceived and scripted by Jan Ware Davenport and produced by Jack Tilles, is being used at McDonald-Hamburger University in Elk Grove Village to train managers to look at the business from the customer viewpoint. So effective and promising are early reactions to the film that many other uses are being anticipated. Jan Davenport and Ralph I. Nelson, manager of creative services for McDonalds, were on hand to describe the current production and use of the film. Hamburger University, already well known for its effective audiovisual programs.

omers, the general public and others. Projects can include analyzing the company's image with any of these audiences; preparing a program to correct misconceptions held as determined by the analysis; counselling management on changes needed within the corporation; organizing and conducting press conferences; recognizing subjects for and researching, writing and placing feature articles; arranging and conducting press interviews . . . and the list goes on and on.

Does such an activity usurp some of the authority of the film man? Not at all: in fact, at the very time that some film men find jobs in jeopardy because of limited funds, broadening one's usefulness to the corporation might even spell the difference between a job with less scope and one with added responsibility.

For the film producer working at a

studio instead of in a corporate environment, the public relations firm can also be an important assist. He can help set up programs to communicate the company's successes, awards, capabilities and film-making philosophies to a variety of audiences which may be potential purchasers of films. Aggressive use of PR can give "visibility" to a firm, bringing them out of the pack by making their distinctive qualities recognized by more people. It can perform a valuable service to the producer's clients by assisting in the promotion of the film—thereby enhancing the value of the film company to his client.

Advertising is another tool used to promote a film company's capabilities—but remember, when editorial coverage on a company or a film appear in print, it is in effect a third party reporting on the good job you have done.

FEATURING OUR SUSTAINERS . . . WE LOVE 'EM!

THIS MONTH . . . BROWNS MOTION PICTURE LAB

Much has been said about the vast and wonderful capabilities of today's Motion Picture Laboratories. Without them we would be out of business, or at least, so deeply involved with this demanding phase of the business, our other efforts may suffer.

There are large, centrally located labs serving thousands of customers in person and through the mail, and then there is the small custom service lab that usually now all their customers personally, and serve a rather regional area. It is to these labs I would like to give thanks and to recognize in particular the one in my home town . . . Browns Motion Picture Lab., San Diego, California.

Bill Brown has had a lab in town as long as there has been a television station here. He grew up during the past sixteen years with the TV and film industry here.

As producers came and went, Browns kept growing and serving those who survived. The lab has moved three times, progressively adding services and capabilities which now include complete 16mm

and Super 8mm services such as black/white negative and positive, reversal, and color processing, color and B&W printing and forced processing of Ektachrome EF films to ASA 2000.

No one man shop, Browns Lab Manager Jess Mininger for nine years has promised to "do the best we can" for those who have needed special services and extra special care. Retired from the Navy, Jess can give us the benefit of over thirty years in the photographic field.

The front office is efficiently, intelligently and attractively managed by Mrs. Schnedler.

Large or small, quality control is the ingredient which will determine whether or not you'll be in business beyond tomorrow. Chemistry supervisor Raul Chavez has been watching the "ph" and replenishment system for eighteen years, many of these with Bill Brown. Bill proudly lists all the major industrial firms, motion picture producers, TV stations, colleges and universities as clients. We're thankful you're there to be on your list, Bill. I know! (I've been on his list for years!)

R.B.M.

SAN DIEGO:

Following last years successful plan, the meetings are opened by showing one of the Cindy award winning films, minutes of the National Board read (a practice that would answer many of the questions of members that write for information!) a short business meeting, and the introduction of new members and guests.

Mr. Bill Hansard, Vice President, General Manager of Front Projection Company spoke on the techniques of front screen projection with the use of live action in the foreground. He discussed the technical procedures for shooting the background plates to scale for any production requirement. Most interesting was the high reflectance-narrow viewing angle screen material that is used.

LOS ANGELES:

The meeting notice read we have a doubleheader for you! First members met at the facilities of Acme Labs., specialists in video-tape to film transfer. Continuous runs of fifteen members each got a behind the scenes look at just how it is done.

As each group completed the walk-through, they then walked south—a short way—to Bill Morrisons I-M Studios for

the meeting scheduled promptly (Ha!) at 8:30. Here, a panel of experts brought authoritative information from their professional fields. Mel Sawelson, of Acme Labs spoke on video-tape procedures. Matt Hill, of Audiographics cassettes and cartridge loading, and Arman Paul of Technicolor Corporation discussed latest film procedures.

BOSTON:

The new year started off with a social hour, dinner, and then the meeting which featured the installation of new offices elected in December, and a business meeting setting the stage for a vigorous and determined effort to bring into the fold, all Boston area filmmakers, professionals and students alike.

The program portion of the meeting was presented by Mr. Charles Wyckoff who discussed his development of extended range films.

January in Boston is not exactly shirt-sleeve weather and in spite of the fact that the heating conditioner at the Town House failed just as the presentation began, the audience was very attentive and a lively question and answer period followed.

February's meeting was hosted by the Honeywell Computer Company, Chairman

Call for 12th Annual Cindy Film Competition Entries

Awards Chairman for the Cindy film competition, Hal Reavely, has announced the dates, schedules for judging, and new rules and regulations for the Twelfth Annual Contest to be held in conjunction with the Annual National Conference this year in San Diego, California, October 14-16, 1971.

The competition is now open and entry forms, rules and instructions may be obtained by writing to the National Office IFPA for complete details. Entry fees are the same as last year, however there have been some changes in the procedures and the management of the judging.

Entry forms with fees are first sent in to the Chairman. You will then be advised where to ship your film.

All entries will be acknowledged and certificates of entry awarded.

Entrants will be advised if their film has been selected for the finals and the balance will be returned to the senders with regrets.

The awards banquet will be televised and videotaped for loan to TV stations in other cities. Color film clips will also be made available to winners and their companies.

Winning films will be invited to become part of the Cindy Film Library for the 1971-1972 season for use among chapters, at special theatres such as the Cindy Awards Theatre at Photo Expo '71, and Television distribution.

CALL FOR PAPERS

The 12th Annual Conference of the Information Film Producers of America will be held in San Diego, California: 13-16 Oct 1971.

As a feature of this year's conference, papers on technical, production or application developments are being solicited. Conference chairman will be D. David Bash, ITV, San Diego. Papers may be addressed to him at 3061 Marquette St., San Diego, California 92106.

Mark Ford opened the meeting, dispense with minute reading and other matters except the financial report and got immediately to the program presented by the Host Milt Levy, Chief of Audio Visuals at Honeywell, Wellesley Hills.

WASHINGTON, D.C.:

(Editors Note: These boys are really on the ball and steamboating along. They have plotted the entire years program, and published a six page notice, detailing the March, April, and May Meeting programs, speakers, locations with maps, and in so doing, greatly assist members in reserving and planning ahead to BE THERE! Peter Scott, young'un of Bob, brings this innovation to IFPA and others should follow his new, fresh, enthusiastic approach to programming, don't you agree?)

DALLAS-FORT WORTH:

Hey! You Texans . . . you're not that far south! We know you're busy but we need to know what you are doing. Put Bill Blume on your meeting notice list and Monte too! We would like to be able to publish all chapter meeting dates for the benefit of our traveling members. We'll start the next chapter news with Texas in the June Issue.

National Scene

BY
R. B. MONAGUE
IFPA National President

I wrote an address to the Boston Chapter.
As I shuffled up here tonight I thought to myself—If I were a Boston Chapter member, what would I expect to hear—or want to hear—from the visiting national president?

Would it be a statement about the National Board?

Would it be a financial report?

Or the story of a new conquest in the area of chapters, membership, or publicity?

Well, perhaps so, BUT I would rather hear about . . .

What does 1971 look like, from the National level, for the Boston Chapter and me, as a member, in terms of—

- Ideas to help me in my job.
- Plans for our young people.
- My image and prestige by belonging to IFPA.
- Ways in which I can develop professionally.

So, I'll touch briefly on the expected items:

- We have great Board of Directors.
- We are solvent.
- We are gaining chapters, members, and publicity.

Now, what you want to hear!

The National Board is very pleased with the way chapters are bringing together the professionals in the various sectors of the United States, and we are proud of the Boston Chapter as well. You, each individual, should be proud too and display your membership certificate. Get ahold of our new Code of Ethics. Frame and display it also.

These credentials mark you as a professional, as does the Physicians oath, the attorneys creed. Integrity in information is as important as it is in architecture.

You must read to keep up with what others are doing. The Newsletter, the IFPA Journal, and Industrial Photography are part of your membership package.

Plan your meetings to present some useful, informative material. The exchange of ideas is what IFPA is really all about.

Because of the concern and ideas expressed to your president from Ed Shaw and Mark Ford, the National Board, last month, slashed the student membership rate in half!

This makes it attractive for young people to become associate members of IFPA, to mix, socialize, and learn from you the technical, creative, and some knowledge of the local business climate.

They will receive all benefits, documents, and publications you do. They get exposure to you, their future employers. They don't get to vote, but do get to join you in every other way, including the coffee and refreshments.

Further, we are suggesting that each Chapter, in addition to judging a "Cindy Awards" category, hold a student film competition in its area. The grand prize winner from a final national judging will receive a "Mini Cindy" at the 12th Annual National IFPA Conference and "Cindy Awards"—October 14th through 16th, 1971 in San Diego, California. These young people are also eligible to apply for the E. C. Keefer Scholarship Award which last year totaled \$2,800.00 in cash and services.

You will also be hearing how your company can help a Cinema Student with an appropriate research or work experience program.

Now about Image and Prestige:

You've got to help yourselves—but we can help you with these ideas.

- Do a story about yourself, your group, or your company. We'll publish it or get it published. (Example, Biz Screen features, Newsletter feature, I.P. cover and story, P.M.I., American Cinematographer, Technical Photo, etc.)
- ENTER FILM COMPETITIONS—specially ones like the prestigious "Cindy Awards." That plaque can mean a lot to you and your BOSS. (give him a copy!)
- You've got to look professional, act professional, and BE a real pro. Don't compromise yourself or your product. It's hard work to make a good film so don't sell it short by squeezing by. As Astronaut Gus Grissom said to the workers who build space boosters for manned exploration—"Do Good Work"—It's that simple!
- And finally—you never should stop the learning process. An engineer five years out of college, is already obsolete if he hasn't con-

tinued to learn the new technology and disciplines that explode in this decade of information.

If you haven't learned anything new in the past six months you are fast becoming obsolete! Learn from your young people—they have the time to experiment! Learn from seminars and symposia—they do the research and the work of gathering new information! Learn from reading—then put it into practice, where you can, and even sometimes where you can't!

IFPA plans to bring the action to the East in late 1971 or at the latest, 1972. We've made a modest start in 1970—three regional national board meetings. In 1971 three more plus a splash in Chicago at PHOTO EXPO '71 with a booth, a "Cindy Awards Theatre" running continuously for 10 days, and an Open Meeting, HOSPITALITY NITE, and Lounge in the exhibit area.

You've got a real challenge ahead for you! a) Cindy and Student Film Judging b) a Membership Contest, c) a publicity program customized to you! d) And an Image to Build and Improve.

SCHOLARSHIP APPLICATIONS OPEN

The Information Film Producers of America, Inc., is pleased to announce that applications are now being accepted for the Eugene C. Keefer Memorial Scholarship for school year 1971-1972. This scholarship will be valued at approximately \$2,500.00 in tuition, equipment rental, laboratory and other services.

The Eugene C. Keefer Memorial Scholarship can be used at any educational institution which awards a recognized degree in film. Applicant need not be interested solely in actually film production; those having an interest in motion picture laboratory science, audio-engineering, optical effects and other film technologies are encouraged to apply.

Applications must be received by July 31, 1971 for consideration in this year's competition.

RULES AND REGULATIONS:

Rule #1. Applicant must currently be enrolled, or accepted for admission in a degree awarding institution, and majoring in film art or science.

Rule #2. Applicant must currently be maintaining a 2.5 grade point average in all college courses, and a 3.0 grade point average

in film courses. This grad point average is based upon 4.0 scale. Graduating high school students, who have been accepted for admission to a recognized institution of higher learning, as described in Rule #1, must rank in the upper 25% of their high school graduating class.

Rule #3. Applicant must submit, along with the completed application form, evidence of his or her potential in film. Either:

- A completed film of an length, produced and directed by the applicant.
- Or, a motion picture script of no less than thirty minutes estimated screen time.
- Or, an original research paper which clearly establishes the applicant's interest in one of the film technologies, i.e. cinematography, sound, animation, optical effects, laboratory science, etc.

Rule #4. All applications must be accompanied by letters of recommendation from two currently active IFPA members.

Rule #5. All applications must be received by IFPA as of midnight July 31, 1971.

write.

We created these new audio visual facilities especially for you. Here you'll find the most sophisticated equipment available today; everything from rear screen projectors to closed circuit television systems. Loaded with film or tape and ready to operate. But if you can't come, write for our new catalog.

Besides representing most of the leading manufacturers of A-V equipment, we have one of the largest rental inventories of projectors anywhere.

You can rent from us by the day, the week, or the month.

Or you can buy from us.

In either case, we brief you on the available equipment. Familiarize you with the way it works. Assist you in selecting the projector best suited to your needs. And put the entire package, film and projector, in the hands of your salesman.

Visit our new A-V facilities and get the complete picture.

But if you can't come, write for our new catalog.

PROJECTION SYSTEMS INTERNATIONAL

Finds

Directory of Film Libraries

The Film Library Information Council recently has published **The Directory of Film Libraries in North America**, which lists more than 1300 film collections and libraries having audio-visual materials. Cost for members is \$3.00; for non-members, \$5.00.

"How To" Booklet on Slides, Filmstrips

Those who plan audio-visual presentations will find Kodak's 92-page booklet **Producing Slides and Filmstrips**, useful and of interest. The publication contains photographs, drawings and diagrams. It costs \$1.75.

Management Guide

Three Steps to More Skillful Management is the title of a three-part publication of potential interest to the audio-visual executive or those utilizing audio-visual materials. Sections are "Managing Your Business," "Managing Your People," and "Managing Yourself."

Book on Videocassette Market

Among the first surveys of the videocassette market is **Videocassettes: The Systems, The Market, The Future**, which includes descriptions and photos of available and coming equipment in the field. Three quarterly supplements will be sent to buyers of the book, which costs \$12.50.

Report on Videocassettes

Another report on the videocassette market is the recent publication of that title. **The Videocassette Market**, published by Edubusiness, includes information gleaned from interviews with persons in the video field. Included are discussion of the size and scope of the market, its development, software production, and distribution. The two-book set in looseleaf format costs \$250.00.

Catalog of Contemporary Issues on Film

A mini-catalog of films dealing with contemporary problems—from racism

to automation—has been issued by CCM Films, Inc.

Info on Audiocassette configuration

A concise explanation with diagrams of the seven program configurations for audiocassettes currently in use has been issued by the American National Standards Committee and the National Audio-visual Association. **Program Configuration for Audiocassettes** deals with the positioning of sound and pulse tracks on 1/8 inch magnetic tape, as well as other related technical details.

NAVA Equipment Directory 1971

The seventeenth edition of the **Audio-Visual Equipment Directory** has been released for 1971 by the National Audio-visual Association. More compact, but with more listings than previous editions, the directory includes sections on cassette recorders, sound slide projectors, and programmers, synchronizers and dissolve control systems. Its price is \$8.50.

I cut the cost of listening to your slide projector.

Remember when you used to have to fumble around with scripts and switches during your slide presentations?

You still do?

Now you can afford not to. Our Sound-O-Matics cost less than any comparable equipment.

Sound-O-Matic works with just about any automatic, remotely controlled slide projector to give you up to 60 minutes' worth

of audio commentary, music, and sound effects. And it will forward the slides automatically, on inaudible electronic cues you program onto the tape cassette sound track.

You sit back with your audience and enjoy the audio-visual show.

You also can have

Sound-O-Matic in a play-back-only version. Or one that will pre-program pauses

for question and answer sessions. Or one that records audience replies on a punched card.

All at prices that make Sound-O-Matic the soundest sound investment you can make for your slide presentations.

Write for details, or ask for a live demonstration that speaks for itself.

Optisonics Corporation

Miss Raquel Welch

Learn the seven warning signals of cancer. You'll be in good company.

1. Unusual bleeding or discharge.
2. A lump or thickening in the breast or elsewhere.
3. A sore that does not heal.
4. Change in bowel or bladder habits.
5. Hoarseness or cough.
6. Indigestion or difficulty in swallowing.

7. Change in size or color of a wart or mole.

If a signal lasts longer than two weeks, see your doctor without delay.

And be sure to have a health checkup once a year, no matter how well you may feel.

Fight Cancer with a checkup and a check

American Cancer Society

New

New Film Rollers

A complete film processing roller assembly, which includes mounted

bearings, is available from Hartford Precision Products Company. The bearing races and separators come in stainless steel or a variety of plastics designed for corrosive applications such as those in the film processing industry.

Eliminate Rear Projection Screen Glare

A new optical coating to eliminate glare on rear projection display

screens has been introduced by Panelgraphic Corporation. Called Vue-Guard, the coating also reduces scintillation and forms a hard scratch-resistant surface.

Cassette Filing Cabinets

Filing and retrieval of cassettes is convenient with the drawer cabinets offered by Wilson Corporation. Cabinets have full extension arms for access to back rows. Modular in design, the cabinets can be lockstacked together.

Editor/Viewer for 8 mm Film

The Hahnel Super 8 single 8 editor-

viewer has virtually eliminated cumbersome film threading. The new unit features a patented "v" channel film guide which has only one sprocket wheel. In addition, it offers a frame marker for splicing, on-off switch for illuminator bulb, vertical frame adjustment, horizontal frame-line adjustment and micrometer style focusing.

New Animation Disc

A utility-model 12-field disc which uses thumbscrews for bar-positioning is now available from Fax Company. The two-bar model provides three north-south field positions and shadow-free translucent back light for working and tracing through a 15½ x 9½ inch shatterproof Plexiglass window.

Automatic Film Notcher

An automatic film notcher that locates and notches 35 mm frames has been introduced by Agfa-Gaevert. A printer used with the notcher reads the notch and centers the film automatically. Because splices and blank frames are not notched, the printer bypasses them.

Super-8 Projector Has Super Flexibility

Fairchild Camera and Instrument Corporation has announced a new 8 mm sound projector which uses both Eastman Kodak cassettes and conventional reels.

The projector features a scene repeat programmer which can rewind the film to a specific scene at any time during a presentation. It also has an automatic rewind that at the conclusion of the film can rewind a 400-foot reel in one-minute.

The projector has a built-in record playback amplifier for adding or updating soundtrack, a double safety lock system, and a removable recording key to prevent accidental recording or erasures. Automatic volume maintains optimum recording levels.

The metal-cast projector weighs 28 pounds. Its sound system is a solid

state four-watt amplifier with a built-in speaker and external speaker connections.

The projector's film transport system features a variable speed drive mechanism designed to monitor and maintain the sound-sync loop and to prevent film damage.

New Model Movie Camera

Arriflex has announced a new lightweight compact motion picture camera. Its features include low operating noise level for on-location sync sound shooting, and camera speeds—both forward and reverse—of from ten to 90 frames per second. The camera also has a rotatable viewfinder with a

correcting device that keeps the image upright throughout an arc of 120 degrees.

Telephoto Extender Lens

Century Precision Cine Optics announces the new Cine Telephoto Extender Lens for 16 mm motion picture cameras. The lens fits any "C" or RX mount tele-lens, and can convert tele-lenses of 75 mm or longer length to double their power.

New

Berkey Colortran Rack System

Berkey Colortran is offering CRD Dimmers with its new modular rack system. No fuses or fans are in the

dimmers or racks, and a new circuit can be factory set to precise control curves. Custom front ends of all types are available for use with these dimmers.

Animation DISCS? ACCESSORIES?

FAX offers a new 12-field, thumbscrew model Disc at just \$90 . . . the 12-field MAGNABAR[®] Disc at \$115 . . . the deluxe 12/16-field MAGNABAR[®] Disc at \$135. At your graphic supply dealer's, or send check directly to us.

CLEAN
AIR.
CLEAN
WATER.

Read about our fight against film pollution
in Sixteen and Eight.

Dirt can ruin a film.

And our business is printing and processing 8mm, Super 8mm and 16mm for motion picture release prints.

That's why we've put a highly sophisticated air-control system in our printing and processing rooms, cartridge loading room, and every room where your film is exposed to air.

In this laminar-flow system, air comes from thousands of tiny holes

in the ceiling. It forces dirt and dust particles down to the floor level and out the exhaust exits.

That's why we've recently installed a unique pre-coat water filtration system in our processing department.

Unique because this system filters water to one-millionth of a meter. Result: Incredibly pure water.

Dirt.

We won't let it pollute your films.

Looking for A Great Multi-Media Presentation Tool?

Here Are TWO!

You don't have to be a professional to create, direct and produce a professional attentionholding sound slide presentation. These Montage systems have the professionalism built right in.

Which makes them perfect for creating scores of powerful presentations for many purposes — for all types of organizations to show (and tell) new products and services or to show (and tell) new ideas and campaigns; for companies participating in industrial shows, exhibitions, demonstrations and the like; for company public relations programs; for sales staff use in showing company services or products too bulky or heavy to carry around — the possibilities are endless.

Programs can be changed easily to adjust to new campaigns and exhibits. Select the one that best suits your needs. Both use endless-type cassettes for repeating presentations.

Montage/Narrator 1000

Specially designed for rugged environments, semi-permanent needs and heavy duty use. Can be integrated with your Kodak remote-control slide projector. Complete unit \$349.95

Montage Audio/Mate

Ultra portable and highly compact. Designed to operate with all remote-control slide, filmstrip and stop-frame motion picture projectors. Weighs only 4 1/2 lbs. Complete unit \$189.95

Write to Montage today, Dept
BS-571 on specific ways to faster,
more economical presentations.

now there's a choice choice.

The Royal 16mm Manual

Models from \$650.00

The Royal 16mm Self Threader

Unique features on both projectors:

HIGH POWER LAMP

TWICE AS BRIGHT

Newly designed General Electric or Sylvania EJL200 W, 24 V Halogen lamps produce double the screen brightness of 1000 W Tungsten lamp. Won't blacken during entire 25-hour rated life, yet generates less heat than standard lamps.

MAINTENANCE

TWICE AS EASY

Fewer moving parts. All major parts (amplifier, film pull-down mechanism, and motor) are modular units which can be quickly replaced with simple tools. Full year warranty on parts and labor. Royal projectors cost much less than competitive equipment when true Total Life Cost (purchase price plus 5-year maintenance) is figured.

CONVERTIBLE

TWICE AS USEFUL

Standard Royal projectors convert to special power source and Marc 300/16 lamp or Colorarc 300/16 in minutes. The classroom projector can produce auditorium brightness for special shows, then go back to work in the classroom with the standard Halogen lamp. Conversion kit can be purchased with the projector, or added any time in the future.

Other products: Hasselblad cameras and accessories, Hermes typewriters and figuring machines.

It is usually something of a shock to most Americans, but the vast majority of children born on the face of the earth are delivered by midwives, very few of whom have any legal certification, although they are well qualified for the work.

Recently, I wrote that I was a registered midwife. Without a doubt, no other column I have written has precipitated such a deluge of response, among which were queries whether I was qualified to do abortions. (No! No! No!)

How I became qualified to deliver babies is a result of a series of films I did for training midwives. Because I had to go through the course as research before doing the films, I took the exam and qualified for the certificate. Technically speaking, however, I may no longer be legally qualified, as I have not paid the renewal fees during the intervening years.

Films are a very efficient method—almost ideal—for training midwives, whose language and reading skills may be at a minimum. Furthermore, in my experience, midwife trainees have very little respect for

men in general, doctors in particular, and government officials of any kind. They will, however, raptly observe an entire series of training films. They recognize realistic situations on screen, and want to know how to handle unusual situations. A training film can show them, without the presence of a doctor in the room while they watch.

Ask anyone in this business how the sponsored films industry began, and invariably they recount World War II and the government training films used to train millions of men rapidly. Then ask the same chroniclers their opinion of government training films today, and they answer with a simple, disgusted “Yicch.” It’s a curious paradox that the worst films made today are training films, although without them, we probably wouldn’t have an industry.

Why are they so bad? I think the answer is that we still are making them as the government made them in 1943. Training is the one area of sponsored films that almost no company of any size can afford to be without, and yet there’s been almost no progress in making good ones. Usually, they are made on very low budgets, supervised by “training” directors who are either former teachers or former salesmen who, themselves, were great at selling, but who are simply dreadful at training others how to sell.

The other problem is that training people to do simple mechanical tasks, such as assembling a vacuum cleaner, is quite different from training them to sell vacuum cleaners. Confusion often exists in this area. I believe that anyone responsible for producing service training films should be kept three miles away from those producing sales training films.

I absolutely love to do training films, although often I am not allowed to do a good job on them; tightly stricured preconceptions of most training directors in corporations may prevent me.

In fact, my reasons for liking

training films are quite selfish. Like New York City buses, training films have the herding instinct; they usually come in groups of four to ten at a time. Obviously, anticipating a continuing series of films that relieve the financial anxieties of a freelance writer is awfully nice.

Another reason I like doing training films is that they allow the writer to establish a continuing rapport with a client. The result of this kind of relationship is the growth of confidence. Confidence breeds the opportunity to do better work, to innovate, and to show solid results—a casserole instead of a flash in the pan.

I have had the good fortune to be involved in a five-year series of training films for a petroleum marketer. I think the films are superb, and they improve each year. When we first started, the dealers grumbled about the time required to look at the pictures. Now, they ask the company reps when another film will be ready for viewing. The good results have begun to show up in the field also; the more effective dealers are using the selling methods presented in the dealer training series.

That was the good news. Now for the bad news. Last year, another company making its first training film put a process engineer in charge. Having read two books on training, he informed me that he wanted a film along these lines: An opening situation with a man doing something wrong, followed by his superior showing him how to do it right, followed by the original man showing a new trainee how to do it right, followed by a recap at the end: “Tell them what you’re going to tell them, then tell them, then tell them what you’ve told them.” That’s what he told me—numerous times.

The film was completed several months ago, and has become a joke—literally. To date, only three men have seen the picture, and they all laughed out loud.

Oh well, I guess I must train myself to deal with difficult people.

PRIZE PACKAGE

CFI has won many Academy technical Awards.

We're proud of these awards, of course. But the awards that give us the greatest satisfaction are the countless awards won by our clients who trust us with their work.

CFI clients, over the years, have won every conceivable industry honor—from major Academy Awards in films and Emmys on television, to innumerable prizes for technical films and documentaries.

At CFI we bring to bear all the technical and creative skills we've built up over the years to each job. And these skills are comprehensive. Under CFI's one roof everything needed by the professional cinematographer can be accomplished. CFI's capabilities include complete title services and all types of special optical effects in addition to processing.

From the technical point of view, every can of film we deliver is a prize package.

When the cinematographer or director entrusts CFI with his work, he's free to concentrate on creativity in his art. He knows that what he'll see on tube or screen is what he expects to see.

What more can a truly professional processor promise?

Training

"Play It Cool . . .
A Question of Control"
CCM Films, Inc.

ONE OF FOUR NEW TRAINING films for policemen, this motion picture deals with the role of the law officer in mob control. It points out the police behavior can directly affect the situation either positively or negatively. It notes that personal prejudices are detrimental to good police performance, and presents ways to avoid provoking hostile action and giving people reason for hostile reactions.

MUSIC AND SOUND EFFECTS:

Essential tools of the professional
Film Media Producer

"MAJOR" offers you a full 73 hours of background production music for titles, bridges, background—for scoring, editing, recording and dubbing music for you:

- DOCUMENTARIES • COMMERCIALS
- TV FILMS • FEATURE PRODUCTIONS
- SLIDE FILMS • INDUSTRIAL FILMS
- ANIMATION • SALES PRESENTATIONS

"MAJOR" specializes in sound—you get exceptional technical know-how and beautifully recorded original music on LP records or 1/4-inch tape, or on 16 or 35mm Mag. Tape ready for a mix.

IMPORTANT: "Major" owns its own copyrights on all production mood music in its library. World rights available to you on a completely sound legal basis. Re-recording rights on a "per selection" basis or "unlimited use" flat fee arrangement.

OPENING JULY 1

Take the TEDIUM and the OVERHEAD out of editing.

Now is the time for some fundamental changes in film making. Horizontal editing IS the better way to handle all picture and sound editing. If you've seen WOODSTOCK you know what we mean.

Today, the KEM Universal is the most versatile horizontal editing system on the market. That's why we've chosen it for HORIZONTAL EDITING STUDIOS.

To get the most out of the equipment you need an editor/operator specially trained in the system; one who's not fighting progress.

We provide the machine, and the operator to work under your supervision by the hour, day or week. 16mm or 35mm elements in virtually any combination.

Besides all routine editing tasks, there are many previously impossible jobs that KEM makes easy . . . from syncing of multiple-camera dailies to pre-rehearsing sync-sound cuts and on-table interlocks. Why not find out for yourself on your next industrial/educational/commercial/feature/series?

Call now for information about our NO RISK FIRSTTIMERS offer.

HORIZONTAL EDITING STUDIOS

1800 North Highland Avenue, Hollywood, California 90028
213 461-4643—213 346-4472 (after hours)

"Cheshire Puss," said Alice,
"would you tell me please, which
way I ought to go from here?"

"That depends a good deal on where you
want to get to," said the Cat.

"I don't much care where—" said Alice.

"Then it doesn't matter which way you
go," said the Cat.

If you don't care about the quality of
your filmstrips or color slide duplicates, it
doesn't matter where you go. Any labora-
tory will do. But, if you care enough to get
the very best, come to Frank Holmes Lab-
oratories. Here you will find an outstand-
ing enthusiasm for perfection in every
department. Letters from customers all
over the world praise the zealous care we
give each job, no matter how large or how
small. Try us on your next job
...and find out for yourself!

Communication Is A Two-Way Street

Is your press release being watched?

Remember the public service spot for the American Heart Association you saw on TV the other night?

Or the film clip about that new car on the evening news?

Press releases like these give you a unique opportunity to bring your message to the largest possible audience in the most convincing climate.

And now Modern—the largest distributor of sponsored films to television—is offering a new service to help you get the best possible coverage. We call it the Modern TV Newsfilm Network. Here's how it works:

You supply us with 16mm-sound footage. Plus a script for TV commentators who prefer to do their own narration.

We'll take it from there. To hundreds of television stations that use these film clips regularly. (We know, because we work with them all the time.) And at the end of 60 days, we'll send you a report of which stations used your film, and how many people saw it.

Want to know more? Call or write for our free TV Newsfilm Kit. It's available for immediate release.

Modern Talking Picture Service, Inc.

1212 Avenue of the Americas, New York, N.Y. 10036
World's largest distributor of sponsored films and video tapes:
The Fifth Medium.

This 4-inch attache case turns any office
into a movie theatre in less than thirty seconds.

It's the Bohn Benton Institor; an elegant, rear screen (also front screen), Super 8, sound and motion picture projector.

It's light, only 17 pounds.

It's simple to operate. In less than 30 seconds, you can have it set up and running in broad daylight.

It's cartridge loaded. There's no film threading.

It's an attache case. Easy to carry. Just 4-inches wide.

And it's sensibly priced. \$300 for single units. Or as low as \$240 in quantities.

Write today for our new brochure: Bohn Benton Inc., 110 Roosevelt Avenue, Mineola, New York 11501.

MICHELLE BENDER

AS INTRODUCTION to this month's BUSINESS SCREEN issue on multi-media, we would like to share with our readers excerpts from a captivating essay, "Mating Media", by Edmund Carpenter in his book with photographer Ken Heyman, entitled *They Became What They Beheld*.

Although possibly a bit literary for BUSINESS SCREEN application, and obvious, for some readers, the point of the essay is worth bringing to the attention of those who would resist use of multi-media as "unnecessary", or those who need to convince others of its importance. The essay reads:

"Mating two media can simultaneously declassify old cliché and reclassify new cliché. The marriage of the telegraph and press created the front page of the daily newspaper with its continuous juxtaposition of images.

Hot-liners cross public radio with private telephone. Much of the power of this medium derives, I believe, from its newness and is therefore temporary.

"Joyce crossed cinema and book in *Ulysses*, radio and book in *Finnegan's Wake*; in so doing, he not only threw light on these . . . media, but he used each as a means of retrieving that wealth of perception and experience stored in the English language.

"Crossing tape recorder and book produced the nonliterary autobiography . . .

"Crossing the tape recorder and still camera and book, produced such works as . . . Guy Carawan's book on the Sea Islanders.

". . . New forms always seem . . . chaotic since they are unconsciously judged by reference to consecrated forms. But a curious contradiction arises: new forms are condemned, but the information they disseminate is believed, while the old and valued aren't even seen."

The multi-media users described in this month's BUSINESS SCREEN know this phenomenon well.

Feedback

WITH REGARD TO MR. LODGE'S LETTER in May's *Feedback*, evidently Mr. Lodge is not fully aware of the new developments, nor our present practices. I stated that video tape will replace chemical photography in many of its basic applications within three to five years. This is a fact. Already the major advertisers and agencies throughout the country are switching to the use of videotape for distribution of commercial messages.

... Ninety-five percent of the network programming aired today is aired via videotape machine, regardless of the fact that the program may have been shot on film. Commercials are being switched to distribute on tape so quickly ... that it is almost impossible to keep accurate records ...

Film varies from print to print as far as color is concerned, and since the medium of television is an electronic one, it is far easier to control quality—especially color balance—utilizing the electronic medium.

From an economic standpoint, the normal advertising patterns have been to send each television station on an advertiser's list two 16 mm prints at an average cost of \$6.50 a piece ... The two prints would be good for approximately 65 to 70 plays ... A single video tape dub runs approximately \$13.00 to \$14.00 and lasts for at least 125 plays ...

Mr. Lodge ... disagrees with ... the ... claim that anything being shot on film presently can be shot on tape more economically, faster and ... he fails to state that we can see what we have shot immediately thereafter ... He goes on about a documentary on the subject of solid waste disposal. It was filmed at 15 locations in 10 states in 10 shooting days, including travel, by one cameraman with three additional locations covered by others. He asks could that have been done using videotape ...

Well, my answer to that is, "Hell, yes." ... WGBH in Boston has just got through shooting a series for NET, 100 percent on videotape, shot in Grand Canyon, in Hawaii, in a moving car, in a moving boat.

KTLA in Los Angeles ... shot scenes from a helicopter. NTP ... shot from inside the Goodyear blimp and hundreds of other supposedly inaccessible places.

Mr. Lodge may not have seen such items as the Norelco PCP-90 hand-held camera, which is approximately the size of a good 35 mm hand-held camera, nor has he seen the Ampex VR3000. Both of these units run on rechargeable batteries and are light-weight enough to be shipped as baggage on the same airplane as the cameraman.

... On economics ... how many days are spent in the lab and how much of the original material ... shot is lost ... due to overexposure, or underexposure ... with tape, before you leave the location site, you know exactly what you have.

... Mr. Lodge may be used to operating where programs and commercials are shot live and only stored on videotape. This is not the

videotape we are talking about. Sure videotape is great for storage, but it is even better when used creatively and it simply replaces the old chemical methods.

... with regard to the new videotape cassettes, sure we have some problems to iron out—standards for one—but an all-industry committee is working on this ... As far as programming material being available and who will buy it, only time will tell.

I think that Mr. Lodge is a little premature and he is holding onto his security blanket—a piece of film ... He reminds me of a farmer in the middle of his field, saying they will never build an interstate through here. Surprise—it may have taken a little longer, but that interstate is now a reality.

New Eclair ACL: half the size and half the weight!

Sync sound and silent running in a camera that weighs 8½ pounds and is less than a foot long.

Ken Nelson has made a short documentary film with an ACL. "In the past, I've always looked around for a place to rest the camera between shots," says Mr. Nelson. "But with this new one, I found it didn't occur to me to put it down."

With its 200 foot magazine and without a lens, the ACL weighs less than 9 pounds and measures 11½ inches from front to back. Half the size of its competitors. Less than half the weight.

This is the most *inconspicuous* camera on the market. It's completely silent, of course. Hand-held, it's much smaller and lower than your head, as you can see. The bat-

tery weighs about a pound and fits into your pocket.

And the ACL is *fast*. You can change its clip-on magazine in less than five seconds. No threading; no need to touch the film at all. Film maker Eric Saarinen says: "This is the first silent camera that you can run with."

The ACL has a crystal-control motor. Sync sound with no connection whatever between camera and tape recorder. Fantastic accuracy. Sync error is less than ½ frame in one *continuous* 200 foot take. That's 8,000 frames.

What else? A universal lens mount that lets you use any lens

with any mount. Extremely bright and precise reflex viewing, with viewfinder that rotates 360 degrees. And a price that's considerably lower than the competition.

For more information, ask for our free ACL brochure.

How one designer

Uses today's media with a twist of tomorrow

For 'way-out' commercial presentations

MESSAGES OF A MULTI-MEDIA MAKER

"SPACE" AND "CHANGE" are key words to most people today, but they are especially meaningful to Jim Sant'Andrea, designer, director and producer, at Jim Sant'Andrea Multi-Media Design, Inc. For him, they represent two unique multi-media shows he designed; one used by Higbee's Department Store in Cleveland, Ohio, a member of Associated Merchandising Corporation chain; the other for Goodyear Tire and Rubber Company in Akron, Ohio.

The purpose of the Higbee exhibit, "Space," was to present that store's future merchandising plans to top management, in a contemporary and avant-garde style that would create a lasting and favorable impression. Each year, executives from AMC stores throughout the country meet at one of the stores, and it was Higbee's turn to play host last year. After they viewed "Space," elements of the exhibits were moved to the store floor for customer display.

The Goodyear multi-media message, "Change," was also geared for more than internal company use. Each year, the company goes to 48 cities to inform and motivate their own store managers. In addition, "Change" was used to orient independent dealers holding franchises from Goodyear.

The shows and their techniques are newsworthy, but to fully understand their effectiveness, we must understand the philosophy that underlies the ideas, and the motivating force that drives them to completion.

don't
square
tures,"
ys Jim
nt'
drea, "I
a lot of
und
otion
tures . . .
und
tures
ve a

ension."

SPACE...

Two inner-sphere theaters in lobby before entrance to large theater. Graphics on lobby wall elaborate "space" motif.

Inside large theater, Higbee's spreads its good name on four square screens and one sphere-shaped one.

Putting their best foot forward, Higbee's presents merchandising plans.

The five screens offer "space" to create an environmental impression.

"I see this business a bit differently than my counterparts," comments Sant'Andrea. The client is not always the source of ideas."

In department store merchandising for instance, many stores are still using the "dollhouse" styles—according to Sant'Andrea—in which audiences walk through a room interior. The problem with this approach, says the designer, is that it shows only one idea at a time, and it takes the whole display floor to show ten ideas.

He adds that you can take a concept, put it in a small theater, and through slides and film, show hundreds of ideas together. This should not eliminate the walk-through display; it should supplement it.

"The purpose of one is to feel and see quality; that of the other is to stimulate ideas," explains Sant'Andrea.

"The audiences walking through a store today are predominantly young people, Sant'Andrea observes. "Merchandisers are still reaching them on a level of fifty years ago. We must use the media that young people take for granted as part of their reality."

"The display might be European, but I'm a 'modern' American," Sant'Andrea adds.

How can a "modern" apply multimedia for selling purposes? "Theater," says Sant'Andrea, "is a place for communication . . . and it is natural for an exhibit presentation with its potentially high ambient light situation . . ."

One of Sant'Andrea's favorite "theaters" is the *tunnel theater*—an open-ended structure that serves as a marquee to attract people, as well as a theater. The one used for the Higbee exhibit had been repainted after use at a display for Knoll International. Inside the tunnel theater, viewers "felt" a sense of

... CHANGE

depth, as they absorbed the message. AMC executives watched the multi-media presentation on several screens at Higbee's. The main or central screen was a rigid sphere shape, three feet in diameter. Focused on that sphere were a 16 mm motion picture projector and a Carousel slide projector. Two additional carousel projectors were focused on the two square screens that flanked the sphere. All three slide projectors and the motion picture projector were programmed with each other. Sant'Andrea gave the "theater" application still another unique twist at the Higbee display. He installed two *innersphere theaters*—large plexiglass spheres with five round apertures in each. Slides were projected into the planetarium-like dome. The viewers, peering through the portholes, saw a round concave picture, as if they were looking into a dish.

"I don't like square pictures," notes Sant'Andrea. "I do a lot of round motion pictures . . . round pictures have whole new dimension."

Both the *tunnel theater* and the two *innersphere theaters* were part of the lobby display before the entrance to the larger theater, where the AMC executives saw an all-day presentation that continued to use the "Space" concept—space to work, live and dream in.

In the theater, the screen set mimicked that of the tunnel theater. It included two more square screens. The central or main screen, in this case, was an inflatable plastic sphere, eight feet in diameter. The other four screens were each eight feet high and twelve feet wide. The total set, counting the spaces between the screens, enclosed the audience with 75 feet of screens. The live dancer in front of the screens was the same performer seen

Local Goodyear District manager introduces concept of "Change" with the help of multi-media.

Audience doesn't "tire" when live talent is combined with slide visuals.

Selling an audience on how to sell . . .

Information as well as enthusiasm was packed into the Goodyear presentation.

in the filmed parts of the show.

After the AMC presentation, the three smaller theaters were moved to the store floor. The *innersphere* theaters were set up in the Mod Shop with a taped sound track and a programmed slide show. New fashions were shown, and a live model stood nearby. The *tunnel theater* was set up in the home furnishing department.

For the entire Higbee show, Sant'Andrea used: 12 Higbee executives, 16 fashion models, one dancer, plus taped narration, film and slides. Equipment used included five Kodak Carousels, one Bell and Howell 16 mm motion picture projector, Sant'Andrea's own speaker system and lights (three follow spots and an ultra-violet light).

"It's not the number of slides that is important, but what you want to say," says Sant'Andrea. "It's a matter of merchandising, as opposed to advertising."

He adds, "If you spend a lot of money on the hardware, there's less to spend on the software, and that's where the message is at."

This point has gotten Sant'Andrea much mileage from "Space." Easy modification of software has allowed him to adapt the show for varied audiences. In fact, "Space" had been presented at the Art Directors' Club, as well as at Knoll International (office furniture company), before it was adapted to Higbee's needs.

After the success of "Space," Sant'Andrea developed "Change" for Goodyear. The two-hour production consisted of four troupes, each with its own sets, filmic software, lights, sound system and slide and motion picture projectors.

The live company consisted of twelve singers, dancers, actors and actresses who wore white costumes against 100 feet of multiple screens. Numerous interesting slide and motion picture effects were projected on the cast, assimilating the live performers right into the film, as was done with the dancer in the Higbee presentation. Again, this was multi-media in its broadest sense, as the four companies travelled to different cities, motivating tire sales people.

Interestingly, despite his wide use of films and filmstrips, Jim Sant'Andrea has some surprising speculations as to where they are headed.

Hedging a bit, he comments, "I may not tell you where they're going, but you can draw your own conclusions." Then he adds, "... I don't think they'll die ... They may come back as a chameleon in another form ..."

"Strip film is probably going to give way to cassettes and super-8 to tape," he says.

Other media which interest Sant'Andrea are holography and electronic A-V. "These media are those of the future," he says. "Videotape and holography will be used not only on screen, but in other projections as well."

Speaking of screens, Sant'Andrea has produced some dynamic effects using colored ones. "Colored screens are part of the color mix," he explains, "part of the palette ... They create an aura of interest ..."

Another method Sant'Andrea has used to obtain unique effects is to embed ultra-violet paint on the screen. He then uses a black ultra-violet light to make visible what is painted on the screen. He explains that he can project slides or motion pictures without the ultra-violet light and the painted message will not show; if he combines regular projection with the ultra-violet light,

Tunnel theater used for Knoll International presentation was re-painted and adapted for Higbee's.

Motion picture on the spherical screen and slides on the square ones are coordinated in presentation inside tunnel theater.

Live model peeks inside innersphere theater to get the message.

the result is a mixed effect.

Asked how effective his philosophy and techniques are at selling people, Sant'Andrea summarized with, "The co-mingling of the various media is what it's all about ..."

Judging from trends throughout the United States, multi-media, in deed, appears to be "what it's all about."—MB

Brochure given to the audience before "One in a Hundred" presentation begins.

■ YOU ARE SITTING THERE thinking that this is just one more hometown film, or at best a mediocre public relations pitch, but then it happens. Thirty feet of movie screen is filled with pictures of Worcester, Mass., and the huge stereo speakers make you feel as if you are actually there.

The event is a showing of "One in A Hundred," Worcester Area Chamber of Commerce multi-media production. Capturing all the positive qualities of the region, the presentation was conceived to attract industry to the area and to upgrade the image of the area for those who live there.

Two years ago, Worcester, like a number of other areas, used a minimum of audio-visual promotion. The only equipment the Chamber of Commerce had at the time, according to Charles Jolliff, the Chamber's Executive Vice-President, was one slide projector, with which a representative would speak.

"We were in dire need of some sort of A-V potential," he notes.

Judging from the equipment they now have on hand (see box, next page) and from the scope of "One in A Hundred," they have realized that potential quite effectively.

Jolliff and Roger Frost who was manager of the Industrial Services Department of the Chamber of Commerce put their heads together, and began taking slides in the spring of 1968.

Soon after, they brought in Milton W. Sebrin, Manager of Audio-visual Services, Norton Company, Worcester, and Richard F. Wright, News Director, Radio Station WTAG. Together, they screened and picked slides, involved area industry in the project, and arranged for the necessary equipment.

Worcester area industry participated in many ways—offering equipment, manhours and expertise, as well as slides of industrial and manufacturing sites, recreational, business and retail locations. More than 7,000 slides were contributed by 53 area companies and organizations. In addition, more than 1500 slides were taken by the Chamber of Commerce staff and E. Cournoyer of Sky-Hawk Photo Service, and hundreds of feet of color movie film was shot by Jim Watson Film Productions, Holden, Mass.

Slides were assembled in Carousels, checked and reassembled. A script was written by Richard Wright and was correlated with taped music. The E. B. Luce Company, audio-visual electronics company, designed and built a 27-foot portable screen, and a tape programmer to operate the projectors. Wendell Crockett and J. Randolph Swanberg of Luce spent time cutting, recutting and splicing the soundtrack.

Worcester Is Better After A/V

Upgrades image

Attracts industry

Through multi-media

Finally, "One in A Hundred" was ready to make its premiere in December, 1970. The show features 450 color slides, five Kodak Carousel projectors and a 16 mm. movie projector. The presentation is automatically operated by computerized tape, and has been seen by more than 10,000 area residents.

Currently, plans are in progress to take "One in A Hundred" on tour throughout the United States—especially to areas of potential industrial recruitment, such as New York, Chicago and Los Angeles.

"A lot of the multi-media presentation has to do with the growth of the area," observes Gary L. Washburn, Manager, Finance and Membership of the Chamber of Commerce, who has become spokesman for the presentation. "It brought to the screen all the growth of the area and helped to market it. It did a better marketing job than any other media we could have used."

The preparation of "One in A Hundred" was financed by the Chamber of Commerce. With all the volunteer help, it cost roughly five thousand dollars. Without the local unpaid man-hours, it would have cost 25 to 30 thousand dollars, estimates Washburn.

Asked about the advantages and disadvantages of multi-media such as "One in A Hundred," Washburn notes, "The big advantage to this kind of showing is you have slide trays so it can be adjusted . . . the contents are not locked-in like a movie." He adds that this is especially important for the Chamber of Commerce in deciding which business firms to include.

One big problem Washburn describes is the difficulty of moving the custom-built screen which is 27 feet across, and 11 feet high. It is constructed of 20 sections of aluminum that are hauled to the site and set up. "They just don't make screens that big which we can afford," he observes.

Washburn recommends having at least one extra projector. "You never know when one is going to blow. It's an inherent weakness in the system," he says. He speaks from an unfortunate experience at a local high school showing, when the projector gave out.

The Chamber of Commerce man recommends getting the slides down to one or two drums, rather than having more.

Concord tape recorder (with two four-speaker units, custom attached to the screen) (1)

Amplifier unit (1)

Custom-built movie screen (1)

Portable projection booth (1)

"That way you don't have to be constantly hauling drums around," he says. We have eight trays of slides, but it's much easier to handle in two drums."

Initially, the length of "One in A Hundred" was based on a Massachusetts State Industrial Development Board presentation, and ran 62 minutes. Washburn says, "My recommendation is never run a presentation more than 30 minutes. Otherwise, you lose your audience."

Washburn has been responsible for the verbal introduction and handing-out of brochures that precede each presentation. He says, "Response has been astounding . . . kids don't think it's a funky establishment trick . . ." He notes that that is important because, "When you're losing kids to other labor markets, it hurts . . ."

To summarize, Washburn says about "One in A Hundred," "It creates in people that see it an immeasurable pride in the area and makes them want to stay here if they're here, or come here if they are located elsewhere . . ."

A better endorsement of a multi-media production could not be hoped for. ■ M.B.

Three-screen showing was previewed before buyers, merchandisers and manufacturers one day prior to the opening of the National Housewares Exhibit.

Formula for better A/V mileage

Many slide films are gathering dust along with the equipment used to show them . . . DuPont has found that their lives can be perpetuated with better follow-through and planning

THE AUDIO-VISUAL INDUSTRY could probably be twice its size if users would employ techniques to lengthen the usable life of filmstrip and slide productions. DuPont has found a way to keep a good thing going with a slide film it produced called "Gourmet '70's."

Two aspects of the DuPont production make it newsworthy. 1. The production was developed in conjunction with a business publication. 2. Its market of users and viewers keeps enlarging rather than dwindling.

DuPont's sales management, Teflon Finishes Group, met with the editor of *HOUSEWARES Magazine*, a Harcourt Brace Jovanovich Publication, in June of 1970. The object of the meeting: to discuss what new program DuPont could offer to buyers, merchandisers and manufacturers of housewares products. DuPont's interest in housewares is Teflon finishes for cookware. The market for Teflon finishes on cookware has grown from two million units in 1963 to one third of the total cookware produced in 1970. The sales

chart showed signs of leveling. Gourmet type cookware began to penetrate the market and was somewhat responsible for the Teflon showdown. Many buyers and merchandisers felt the Teflon did not belong on gourmet cookware.

The editor of *HOUSEWARES Magazine* indicated to DuPont that Teflon could serve a vital function as a finish for gourmet cookware as well as traditional utensils. How to put this across to the trade? To start, an audio-visual color slide presentation was evolved which showed the gourmet market in housewares departments and its influence in creating a new aura for housewares.

DuPont agreed to produce the slide show under the direction of *HOUSEWARES Magazine*. The editor of the magazine contacted key houseware buyers and merchandisers in 13 department stores from Boston to Los Angeles, and arranged to photograph their gourmet departments. DuPont engaged Larry Kieley, a producer and photographer, to tape record interviews with buyers and to shoot the in-store photographs.

More than 150 color 35 mm photos were taken in each store. An average of 30 minutes of interviews were taped with each buyer. A questionnaire was prepared in advance, asking buyers for their opinions on the gourmet trend and how Teflon coated cookware might fit in.

Shooting was begun in September 1970. Target date for the first showing

to the industry was the January 1971 National Housewares Exhibit—at Chicago's McCormick Place—one of the largest trade shows in the country, with more than 1,280 exhibitors and 60,000 show-goers.

The editor of HOUSEWARES Magazine, Kieley and Du Pont public relations man Lloyd Mackall were present during shooting sessions. Each buyer interviewed was given a form to fill in declaring his interest in viewing the finished presentation and in bringing along other members of his organization.

DuPont, working with the magazine editor, decided upon the best time and place for the showing. A motel site near the show place was selected, and the Sunday preceding the show's opening was chosen because buyers would be more readily able to attend.

Through the combined efforts of the producer, DuPont and the magazine editor, 250 slides were selected for the showing; tapes were edited to two minutes per interview; and a script was written. The slides were synchronized with the taped interviews, bright background music and the editor's voice narrating the presentation.

The program was designed to dramatize the importance of gourmet to housewares buyers and manufacturers. Du Pont insisted that it be non-commercial. Accordingly, Teflon finishes

were mentioned only once during the presentation, although several display photographs that showed how to integrate Teflon-coated cookware into gourmet merchandise were included.

Credit lines noted Du Pont as the program's producer, and HOUSEWARES Magazine publicized the showing in several issues prior to the Housewares Show. Invitations were sent to buyers and manufacturers from lists supplied by the magazine. A condensed version of the show was prepared for use with a rear-view projector, which was set up at the Housewares Magazine show booth in Chicago.

The HOUSEWARES Magazine editor addressed a key industry group at the show, which provided a second opportunity to show the presentation.

The preview production was shown on three-screen rear projection. Because of strong interest, it was shown twice on the Sunday preceding the exhibit's opening.

Key buyers attending meetings elsewhere were bussed to the site of the presentation. Signs carrying the symbol of the presentation—"Gourmet 70's"—were posted in motel lobbies. Formal invitations also carried the show title. In total, the presentation was seen at the National Housewares Exhibit twice Sunday, once Tuesday, and everyday at the HOUSEWARES Magazine show booth.

Condensed version of the presentation was shown during the National Housewares Exhibit at the HOUSEWARES Magazine show booth.

Interest in the presentation grew. Word-of-mouth advertising and enthusiasm for the production began to mount. At each showing, individual buyers who had participated in the film were recognized in the audience

Promotion in good taste

Programs and invitations for "Gourmet '70's" slide film showing were designed to tie in with art themes of the film.

A Boost from print media

Adaptations of the film were printed in special sections of **HOUSEWARES Magazine**.

WHERE IS GOURMET GOING?

WHERE IS GOURMET GOING?

Prints of 35 mm shots were made and inserted into notebooks which were sent out alone with interview transcripts to each buyer who participated in the film.

and took their bows. This situation helped humanize the presentation.

After the show, the presentation came to New York where it was shown before the Aluminum Cookware Association. A one-screen version was created for use before smaller groups.

Next, a showing in New England before a local housewares club was scheduled. It played to one of the biggest club turnouts in recent years, and the Boston department store buyer who played a role in the film was on hand to receive congratulations.

At each showing, DuPont had supplied a printed program, custom-made for the particular group seeing it, and **HOUSEWARES Magazine** printed three versions of it. In March 1971, the periodical printed a black and white rendition showing buyers expressing their views on gourmet as recorded from the tapes. Transcripts of each tape were sent to buyers who participated. A black and white section in another issue featured additional buyers.

In the May, 1971 issue of **HOUSEWARES**, a 13-page full color section on "Gourmet '70's" showed 39 display photographs from the slidefilm production. Manufacturers of colorful gourmet cookware, as well as DuPont, ran full color advertisements in the section. An overrun of the section is now being used for handouts at other meetings scheduled throughout the country.

Inquiries concerning the presenta-

tion keep coming into DuPont and **HOUSEWARES Magazine** often, asking how the slide-film can be shown. DuPont now supplies the presentation in Carousel and synchronized reel tap form, or in Carousel and cassette tap form, free-of-charge to interested housewares groups and buying offices.

Interest continues to mount. One of the country's largest discount-department store chains has scheduled showing. By popular demand, a large buying group will present it to its buyers at the year's second National Housewares Exhibit in July.

An abbreviated version of the presentation can be shown in an office atmosphere to advertising agencies and accounts. The magazine's salesmen find it easy to carry the equipment and stimulating to show to advertising prospects.

As a token of appreciation, DuPont supplied each participating buyer with a personalized notebook of color photographs, interview transcripts, and the complete presentation in Carousel form.

Now, almost a year after the initiation of the idea, the slide film showing is still "hot". This is one A/V effort that won't be allowed to die.

Other A/V devices for the program are currently being reviewed. The modest presentation could well begin a revolution in supplier-business magazine user communications with A/V as the catalyst.

COOKWARE STATUS SUMMARY:

To our readers:

This is the first page of a 16 page advertising section prepared and sponsored by the North American Philips Corporation for the purpose of introducing a new audio and visual cassette system. It is the largest single advertisement to appear in Business Screen since the magazine started publishing 32 years ago.

**Business
Screen**

**The company
that brought you the cassette
introduces a whole new principle
of picture and sound presentation**

...and a new world of ways to communicate.

In business. In education. In the home.

North American Philips introduces PIP . . . the new Norelco audio and visual cassette system

The art of communications has just advanced into a new era of versatility. The PIP era.

To put it simply, the PIP system combines all the advantages of communicating with still frames, motion, animation and sound in a *single projection unit*. This is accomplished by:

- 1) a technical breakthrough called *variable speed projection* and
- 2) by using separate sound and Super 8 film cassettes.

Now, with PIP, the spoken word

can be *illustrated* on the screen in its most effective way without being restricted to a single medium. And it is now also practical for one film to be targeted to a variety of different audience interests—by language, by subject, by prior knowledge, by time limitations, etc. All of this with the ease of inserting a cassette.

The PIP system works with child-like simplicity. In fact, the film and the sound cassettes snap into the PIP unit as quickly as popping two slices of bread into a toaster. Hands never touch the film or the sound tape. There's no threading, attaching film to reels, or anything to fumble with and damage.

It has pushbuttons for starting, stopping, fast-forward or rewind, going back a few frames or holding a frame for as long as a viewer wants.

Sounds interesting, doesn't it? But

what about costs? And where does it fit into your present audio-visual applications?

If you've been using slides and filmstrips for training, selling, demonstrating, etc.—now you can afford to add motion to the presentation. Not only will this enhance the "showmanship" of the presentation, but it is extremely functional.

For example, in a filmstrip for training a mechanic, a motion sequence showing the intricate movement of parts can be included. Or in a slide presentation on fire prevention, a sequence showing how rapidly a fire spreads can be included.

The motion helps make the presentation clearer, more memorable . . . yet doesn't have the production involvement of a full scale motion picture. You now can use motion only where it serves the purpose of

improving the presentation. If you use motion picture films for training and selling . . . you will be able to save some 80% to 90% on the film footage! This is because an average 20 minute motion picture film uses 400 feet of film while the PIP system uses just 50 feet or less. Yet there is no effect on the impact of the film!

With standard motion picture projection, the film runs at a fixed rate of speed (24 frames per second) even if there is no motion on the screen. It has to; because if the projector stopped at a frame, 1) the film would be damaged from the heat and 2) the sound track (which is on the film) would also stop!

In most motion picture films much of the footage consists of identical frames that have to keep being repeated. For example, when the

title of a film, or a diagram, or a closeup of a product is being shown for just 5 seconds at 24 frames per second, it takes 120 frames of film to show it! With PIP, only one frame is needed.

Only a small fraction of as much film has to be bought, processed, handled, duplicated, mailed etc.!

Even further savings are added because PIP uses silent Super 8mm film. Less expensive to buy, process and duplicate compared to film with a sound track.

And remember the point made before. The PIP system sound cassette can be changed anytime, easily without changing the picture . . . by using another cassette. The cost? About \$1.50!

A 20 minute PIP film and sound presentation can be duplicated for a few dollars. Complete. With much

simpler and less expensive handling and shipping. By reducing the cost of films so drastically—a whole new world of potential uses becomes practical.

Creative film making techniques without complications are also part of the PIP system benefits. Slow-downs, speed-ups, stop-action, freeze-frames, frame-changing to musical beat, pop-ons . . . and other ways of adding interest and clarity to the contents of the film can be included with great simplicity and economy. Moreover, these can all be done utilizing the existing production techniques and equipment—familiar to all filmmakers.

If you have read this far, you are beginning to understand a little about PIP. Enough, we hope, to start your own imagination working about where PIP fits into your life.

Creating the new world of audio-visual cassette systems

Edward D. Baars
General Manager
Training and Education Systems Group
North American Philips Corp.

Convenient pushbutton controls of the PIP Audio-Visual Unit are demonstrated by the author.

Magnetic tape recording has been with us for more than 20 years. There is probably no easier or better system for storing information for quick and easy referral than tape. In the years before 1960, magnetic tape was being widely used in schools and industry, but had never been able to crack the mass market. If one were to point to the single factor which had hindered the widespread use of magnetic tape, it would be the awkward reel-to-reel threading system. As a result, the average person thought the operation of the tape recorder was only for the hi-fi enthusiast or the technically-inclined.

The first attempt to solve this problem and open up the mass market was the tape cartridge, which eliminated reel-to-reel threading.

In the meantime, Philips engineers had developed an even better approach to the problem. The answer, as you all know, was the Compact Cassette which North American Philips introduced in the U.S. in 1964. The cassette not only eliminated reel-to-reel threading, it also was lightweight, compact, easy to handle, easy to store and most important, retained the open reel tape recorder's fast forward and rewind features.

The Compact Cassette permitted the tape recorder to be designed so simply that it became child's play to operate. Because its overwhelming advantages opened the door to the mass use of tape recorders, the license to manufacture the Philips Compact Cassette was offered to any qualified manufacturer who agreed to comply with the Philips standards. No royalties or no fees were asked, only adherence to established design dimensions to guarantee a worldwide standard.

This move so encouraged other manufacturers to make and sell cassettes and cassette equipment, that it quickly became a new industry in its own right. In just five years after North American Philips introduced the cassette, this new industry saw its annual sales skyrocket to over \$200 million.

North American Philips took a calculated risk in this arrangement, creating its own competition. But, North American Philips knew its own well-designed, Norelco quality products would stand up to any competition. Its confidence was well founded. Since 1964, more Norelco tape cassette playbacks and recorders have been sold than any other make. And, the Compact Cassette

Modern North American Philips plant, Morristown, N.J., where PIP is manufactured.

has become a standard throughout the world.

With this solid foundation in cassette know-how, the Norelco Training and Education Systems Group moved ahead. It introduced low-cost language lab cassette recorders using a unique dual track system. It designed cassette audio-visual systems or synchronizing the taped commentary with the automatic changing of slides or filmstrips. Most recently, it introduced the Norelco Sychrotutor, a cassette audio-visual synchronizer system which has the additional facility of being programmed for automatic stops to let the viewer perform a task or make a response using electronic response devices.

How PIP Was Born

During this same period, a young West Coast filmmaker by the name of Richard Tuber was preparing a

doctoral study aimed at devising a flexible system to demonstrate the development of Chinese calligraphy. To do this efficiently, he felt the need for a sound motion picture projector that could be run at variable speeds. The problem was existing sound film and projectors were designed to be run at a continuous 24 frames per second to achieve acceptable sound reproduction. No practical audio-visual equipment was available that could do the job Tuber had in mind.

Tuber researched the problem and decided that the only way this could be achieved would be by separating sound and film, so that the projector could be run at speeds independent of that required for the sound track.

He became aware of the Compact Cassette, and thought that its principle could be applied not only to the audio portion of the program but also to the film portion to simplify the system. In late 1967, he decided

to approach the creators of the Compact Cassette, and took his ideas to Philips in Holland. Philips was quick to see the potential of Tuber's concept, and turned the project over to its engineering department. As the world's largest electronics manufacturer, Philips made available every resource in developing the Programmed Individualized Presentation System, known in short as the PIP System. Its engineers perfected the vital variable speed film advance system, the Super 8 film cassette, the reliable synchronization technique, and the precision electronic components that brought the unit down to a practical size.

In 1968, the first prototype was shipped to North American Philips for evaluation. The Norelco Training and Education Systems staff sought out leading audio-visual specialists, educators, and business training executives, and gave demonstrations. The responses were enthusiastic. In the process of evaluation, additional features were proposed to create an even more versatile audio-visual system. Engineering designs were finalized, the necessary tools and dies ordered, and new production facilities set up at a North American Philips plant in metropolitan New Jersey for the manufacture of Norelco PIP audio-visual units in the United States. This same plant manufactures the Norelco Sychroplayer and Sychrotutor, and now is in full production on Norelco PIP units.

Part of PIP assembly line.

Album packaging of PIP Audio Cassette and Visual Cassette.

PIP illustrates the spoken word in the most effective manner

IN BUSINESS AND INDUSTRY . . .

PIP's versatility, simplicity, compactness and low cost cassetteware make PIP ideal for an unlimited number of uses. • Training mechanics • Standardizing service techniques • Clerical training • Advertising and sales presentations • Indoctrinating new employees • Simplifying complicated concepts for important customers • Branch office communications • Self improvement courses, etc.

IN EDUCATION . . .

The economy of PIP software, its pushbutton operation, reliable cassette format and multi-media flexibility . . . make PIP perfect for hundreds of pre-school to post graduate applications • Reading and verbalizing • Individual lesson reviews • Foreign language study • Learning music • Showing lab experiments • Technical and vocational training, etc.

IN HEALTH CARE . . .

The PIP system is uniquely practical as a software medium for so many uses • Reviewing surgical techniques which need both motion and still frames • Updating a doctor's education • Nurse and patient training • Diagnostic reference beyond the one dimensional textbook • Case history documentation. PIP is also a most practical means of communication between pharmaceutical firms and doctors offices, hospitals and medical schools.

AROUND THE HOME . . .

The low cost and ease of using inexpensive PIP cassettes open up a whole new world of effective communications beyond the limitations of present media. PIP can • Provide a cooking demonstration instead of a recipe book • Can show a young homemaker how to do many things around the house from bathing the baby to making curtains. It can help solve the servicing problems by showing people • How to make minor repairs in appliances • How to make furniture • Hang wallpaper • How to swing a golf club.

PIP AUDIO-VISUAL UNIT,
Model TE2020

Technical Aspects of the Norelco PIP Audio-Visual System

A. R. Singleton

Technical, Commercial Manager
Training and Education Systems Group
North American Philips Corp.

PIP Audio-Visual System is not limited to personalized viewing. It is capable of large screen rear and direct projection.

The double system format employed by the PIP system, in which visual and audio are on separate carriers, provides a flexibility and program economy which is unique in the audio-visual field.

In the PIP system visual images are carried on silent Super 8 film loaded into a cassette, while audio is carried on magnetic tape in a second cassette—a standard Compact Cassette.

Up to 50 feet of Super 8 film is loaded into the Norelco visual cassette, design of which duplicates many of the features of the Compact

Cassette. It offers the facilities of fast forward and rewind, together with cassette handling and storage conveniences.

A tight-wind mechanism is included in the visual cassette to control the lay of the film and to prevent film unwinding when the cassette is removed from the equipment. A precision pressure and gate plate built into each cassette provides accurate guidance of the film in both forward and reverse operation.

Audio is carried on tracks 1 and 2 of the Compact Cassette, as in all cassette systems, assuring complete

compatibility with all pre-recorded programs. Control signals which are used to advance the film are carried on a separate and isolated track (track 4) of the same cassette. This insures that there is no crosstalk between audio and control signal and provides safety margins necessary for a highly reliable system.

One tone pulse is recorded for each frame of the film. Each pulse advances the film one frame, timing of the pulses determining rate of film advance. Since control signals are recorded on the same magnetic tape as the audio in direct relationship to the narration, accurate synchronization is achieved at all frame rates up to and including 24 fps. The accuracy of synchronization enables full lip sync to be shown even at the economical frame rate of 12 fps or lower.

The unique projection mechanism (pat. pending) includes a shutter which rotates at a constant high speed during motion and still frame sequences. Image brightness, therefore, is maintained at a constant level. It is essentially flicker-free because the shutter speed is above the flicker threshold.

Film is advanced by a two-toothed claw which engages with the film only when it is to be moved. The claw reciprocates continuously in step with the shutter and is electronically actuated to engage with the film when a control signal is received from the control track on the audio cassette. The claw is electronically gated to advance the film when the shutter interrupts the light beam. Following advance of the film by one frame during a single cycle of the claw, the claw is magnetically latched in the withdrawn position awaiting arrival of the next control pulse. The waiting, or latched period, could be very short if the film is to be moved at a motion rate, or of long duration if a single still frame is to be projected.

The high speed of the film advance mechanism, together with very accurate registration, make simplified animation and pop-on techniques two of the important features of the PIP system.

Pulsing the PIP audio cassette

The audio (narration, background music and effects) for the PIP system is produced and mastered in a recording studio in the normal way. Control signals to advance the film are added on a separate track of the audio master using the Norelco PIP Frame Pulse Generator. It is at this stage that it is important to have a narration script marked with exact sync points for each still frame, and the start of each animation or motion sequence. An accurate frame count for each scene, and the frame rate at which it is to be shown, should also be marked on the script.

It is not necessary to time segments to fit the visual with the accuracy normally required for standard sound motion film production. Because the PIP visual can be advanced at any frame rate, it is possible to adjust the rate to fit the audio segment. It is this feature of the PIP system which allows the same visual to be used with recordings in different languages or different narratives, without the complication and expense of re-editing the film.

This also allows the "pace" of a PIP program to be altered at the sync mastering stage.

Sync Recording

It is simple, then, to run through the narration and add tone pulses to the control tracks, using the frame pulse generator. Of course, the master recorder should be capable of playing back the narration while simultaneously in-line recording the control signals.

Lip Sync

Recording control signals to obtain lip sync in short scenes is equally simple. The pulse generator has provision for fine adjustment of the frame rate which permits accurate lip sync. This adjustment can be made while viewing a print or the scene on a PIP audio-visual unit patched to the pulse generator in parallel with the master recorder.

For longer lip sync scenes, there are two possible procedures. One could proceed to interlock, as in a 16mm sound film, and use the sprocket holes to trigger the pulse generator to produce the PIP program audio and sync master.

Alternatively, the lip sync scene can be shot with a camera modified to provide an output pulse for each frame. These pulses would then be recorded in in-line sync with audio. During audio editing and mastering, the pulses would be automatically converted to the final pulse track and master.

During scene editing of film and audio, it is only then necessary to maintain a frame to frame pulse match to achieve perfect lip sync.

Duplicating Audio Cassettes

Duplication of the audio and sync master onto Compact Cassettes can be done on any 4-track (stereo) duplicator with in-line heads (track 1, 2 to track 3, 4). For programs needed in quantity, open-reel duplication with subsequent loading into cassettes is preferred. This has the additional advantage of cutting the tape to exact program length.

Preparing pulsing track with Norelco PIP Frame Pulse Generator.

Careful, detailed preparation of the storyboard simplifies production.

Producing software for PIP

Dick Buch and Dick Logan
Goodway Films

Producing professional software for the Norelco PIP system calls for a blending of the production techniques used in making filmstrips, live action motion pictures and animation—plus the utilization of electronic components not found in any other audio-visual system. At first, this might sound like an imposing task. But, if you fully understand the unique capabilities of PIP, you will find it no more difficult a task than any new undertaking.

From a creative standpoint, it is best to conceive of a PIP film as an expanded filmstrip, rather than as a compressed motion picture.

The first step is the most important, and should be given ample time. This is the preparation of a storyboard and pulsing script. The storyboard should be quite detailed, more than is required in producing filmstrips. It should have as much

detail as an animation storyboard. Both live sequences and art must be broken down into specific frame counts. The storyboard should also indicate the different speeds at which each section of the film will be projected.

The average 20-minute sound training film requires approximately 400 feet of Super 8 film. In a PIP film, using a properly prepared storyboard, you can tell the entire 20-minute story using only 50 feet or less of Super 8 film, and present the same content and impact.

That difference in footage is economy—the secret to a good PIP film. You use motion only when absolutely necessary. And, when it is necessary, never at the usual sound film speed of 24 fps. With PIP such a speed is a waste of film. Live action can be seen perfectly at frame rates between 6 and 12 per second.

Animation can be planned to move at relatively low speed—6 to 9 fps—without any blurring or appearing lumpy. PIP's accurate registration system and rapid frame advance makes "pop-ons" and "flash-ons" very effective at only 1 or 2 fps. And a title or diagram can stay on the PIP screen as long as necessary as a single frame.

In preparing artwork for PIP, it should be planned with a one-field safety margin for titles or essential action. High light transmission backgrounds are recommended, as with any rear screen projection system.

Handling Live Action

Live motion can be photographed at the same frame rate designated in the storyboard. However, caution should be exercised when shooting at relatively slow frame rates, as action crossing the screen can cause blurred images. As an alternative, you can either use sync strobe, or shoot the film at a faster frame rate and skip-print to the desired speed when making the internegative.

Considerable time should have been spent in establishing the frame rates for the storyboard. Care should be taken in planning all live action filming. If you are unable to establish the frame rate for this storyboard, shoot at a speed which you are sure will be faster than will be needed. Then, when you are able to establish the correct frame rate, just skip-print to order. Skip-printing also is a practical solution if you wish to use existing film footage which had been shot at 24 or 16 fps.

One effective technique which PIP allows you to utilize in showing live action is to use varying frame rates within a single piece of footage. For example, we prepared a PIP segment which demonstrated a golf swing in three different modes. The original sequence was shot entirely at 48 fps. Skip-printing every other frame in the internegative for a projection rate of 24 fps, gave us the benefit of unblurred images using half the original film footage. We programmed the downswing, up to just before impact, to be projected at 12 fps using every frame. The result is the downswing is slowed down to one-half the speed of the actual swing. The impact and follow-through are shown at normal speed. By combining the original speed with the half speed, then adding single

Lining up a live shot of actress.

Live sequences can be filmed at frames rates between 6 and 12 fps.

Preparation of animated sequences is simplified by reducing frames rates to speeds as low as 6 to 9 fps.

frame "holds" to analyze swing and stance, an effective teaching sequence was developed.

All live action sequences should be analyzed in the same manner to try to select the most economical film speed that, in each instance, illustrates the action most effectively.

All original scenes, both art and live, should be leadered and sync-punched. An exposure sheet should be prepared for use on the optical bench.

Plan to make a head leader 25 frames long with a focus frame that reads "Focus, Then Start," preceding a 10-frame countdown to a focus frame that reads "Start Button." Also make a 25-frame tail that reads "Rewind Frame."

If all procedures are followed properly, you will end up with a

16mm internegative made directly from original photography without splices. From the internegative a 16mm contact print is made to check continuity and exposure.

When all points are checked and any necessary corrections made, a Super 8 reduction print is made from the 16mm internegative, and inserted in a PIP film cassette. You are now ready to synchronize the film and sound using the Norelco Frame Pulse Generator.

It is during pulsing that the variety of effects possible with PIP becomes most apparent. The director and his sound engineer have the opportunity to experiment . . . to try for new effects . . . to discover for themselves the endless possibilities inherent in the electronic programming technique of the PIP system.

Putting PIP through the film lab

Bernie Barnett
President
EVS Color Center

PIP is a unique audio-visual system. Although its film concept is unusual, there is nothing unusual or different in the techniques for handling the original preparation and duplication of the film. The completed master film can be turned over to any commercial film laboratory which processes and duplicates film.

When the software producer or in-plant audio-visual department would like to enhance the visual impact of the PIP film by incorporating optical effects and animation, and does not have the facilities, this work can be assigned to a post-production laboratory. A post-production laboratory is equipped to do any required optical effects and shoot animation sequences and artwork, in addition to commercial processing and duplication. Either laboratory also is capable of loading the PIP release prints into their visual cassettes.

Here is how the post-production laboratory would handle the assignment.

The original material for a PIP film can be prepared from any combination of the following:

- 35 mm film, sound or silent, negative or reversal;
- 16mm film, sound or silent, negative or reversal;
- Super 8mm film, sound or silent, negative or reversal;
- 35mm filmstrips, negative or reversal;
- color transparencies, 35mm to 8x10;

opaque artwork, charts and photographs;
animation cells.

If, for example, all or most of the original film material is on 16mm, the laboratory prepares two separate 16mm films which for convenience we designate Roll 1 and Roll 2, as shown in the processing system chart on the opposite page. Roll 1 contains all motion sequences from motion picture film; Roll 2 contains all the still frames from artwork and transparencies, and animation sequences. Any existing 35mm film footage can be reduced to 16mm and printed in Roll 1; or, if there is ample footage, it can be prepared as a 35mm Roll 1, and used in the same manner as the 16mm Roll 1. The exact procedure will depend upon the laboratory's facilities.

The client should prepare all material by numbering each original frame in consecutive order of appearance. Each roll of film to appear in Roll 1 should be identified not only by number, but also by calling out the specific scenes which are to be used, i.e., Roll #7, frames 4,350 to 4,525.

All opaque artwork and animation cells must be in a 3x4 proportion. Although they can be prepared in almost any size—from 3"x4" to 21"x28"—9"x12" is the most convenient size for the laboratory to handle. An additional 2 inches of background should be allowed on all sides of artwork to give the camera enough leeway to avoid any

accidental photographing of edges.

In addition to the animation cells any artwork which has overlays also should be pegged for accurate registration. Be sure the pegging is the same used by the laboratory. Each piece of artwork and each animation cell must be identified by sequential numbers.

The same sequential numbering should be applied to all transparencies which are to be used. Since none of the standard sizes of transparencies are in a 3x4 proportion, allow a safe field which will allow the subject to be cropped into proportion. This can be just one edge of the transparency, or cropping into any part of a transparency.

As shown in the processing chart, a single 16mm check print can be prepared by combining Rolls 1 and 2 in the exact sequence and number of frames required. This is done by following a production shooting schedule giving an exact frame-by-frame rundown of up to the maximum of 3,600 frames in the 50 feet of PIP film.

Preparing the Shooting Schedule

This is the "key" to combining all the components to make the completed film. It is in the shooting schedule that the new frame speed are given for converting conventional 24 fps stock footage to any desired fps rate (18, 12, 8, etc.). Original film for PIP can be shot at the desired frame speed without any need for conversion. Using this information, the laboratory is able to deter-

mine the skip-printing procedures, single frame holds, and cutting in of still frames containing opaque artwork, transparencies and animation sequences.

All dissolves, fades, zooms, super-imposes and color corrections should be listed in the schedule.

When the client has verified the check print for continuity and found it correct, the laboratory is able to prepare the Super 8 reduction internegative. From this internegative answer prints can be made, and the subsequent color corrected release prints.

Although the processing system just described uses 16mm as the prime medium, if all of the original film material is 35mm, then the laboratory will use 35mm as the prime medium. It will edit all the footage into a single 35mm roll, splicing in all the still frames of artwork and animation which is shot on 35mm. The completed 35mm film is reduced to a Super 8 internegative from which the quantity release prints are made.

Loading The Cassette

Loading the Super 8 film into the PIP visual cassette is a simple procedure, since the cassette is, basically, a reel-to-reel device that does not require any film lubrication. Most laboratory reel winding stands can easily be adapted for this purpose.

The cassette hub has a sprocket catch, or "filmhook", that securely holds the beginning of the film by engaging the sprocket. Upon completion of winding, the end of the film is similarly secured. As with the audio cassette, the film will not be pulled out of the hubs of the visual cassette when it is wound to either end.

PIP VISUAL CASSETTE

PIP Visual Cassette can be loaded easily by anyone. If need be, even manually.

TYPICAL PIP PROCESSING SYSTEM USING 16MM FILM*

* PIP film also can be prepared on original 35mm and Super 8 film.

Specifications for PIP system components

PIP AUDIO AND VISUAL CASSETTE SYSTEM

Visual: Super 8 silent color film loaded in reel-to-reel Norelco PIP Visual Cassette; film capacity up to 50 feet, 3600 frames.

Audio: Compact Cassette; up to 60 minutes play time (in one direction only).

Synchronization: Complete synchronization of audio and visual at all frame rates. Film advance by inaudible pulses on separate track of audio cassette moving at standard 1 7/8 ips. Pulsing accomplished with Norelco PIP Frame Pulse Generator fed to standard recording equipment also used for audio track.

Tape Configuration: Tracks 1-2 carry audio; Track 4 carries tone pulses. A guard band between the tracks prevents all signal bleed or crosstalk for complete system reliability.

Frame Advance Speeds: Pulsing speeds from a single frame (still) projected for any predetermined length of time, through all frame advance rates from one to 24 frames per second.

PIP FRAME PULSE GENERATOR, Model TE901

Function: Generates the frame advance and auto-stop pulses to be recorded in conjunction with sound track for the PIP Audio and Visual Cassette System.

Pulses: Frame advance—1000Hz $\pm 0.1\%$, duration 32.5mS $\pm 5\%$; automatic stop—150Hz $\pm 2\%$, duration 50mS $\pm 5\%$.

Frame Rates: Mode 1—Manual; Mode 2—1 to 24 pulses per second; Mode 3—Fine adjustment for lip sync accuracy; Mode 4—External sync, e.g., frame sequence generator.

Start of Frame Pulses: Push button or remote control.

Auto-Stop Pulses: Single pulse by push button or remote control.

Counter: Digital counter from 0000 to 9999 (frame advance only) neon tube display. Record—counts down from preset number with automatic stop at 0000. Playback—counts up

PIP AUDIO-VISUAL UNIT, Model TE2020

Function: Lightweight presentation unit designed for individual or small group use. Self-contained with all optical and electronic systems; modular construction for simplified maintenance.

Screen: Rear projection, 4 3/4" x 6 1/2".

Audio: Built-in loudspeaker; provisions for two headphones. Volume control.

Pushbutton Controls: Power On/Off; Audio—Play, Stop, Fast Forward, Fast Rewind; Visual—Single Frame Advance, Fast Forward, Fast Rewind.

Housing: Rugged, high impact ABS (Noryl) case with carrying handle.

Size: 9" wide x 16" high x 16" deep

Weight: 18 lbs.

from 0000, or preset number.

Output: Combined output 0.1 to 1.0 volts rms—preset.

Calibration: Preset controls for tone amplitude and selector for continuous tone for recording level adjustment.

Tape Recorder Control: Relay contacts (5 amps) provided for stopping recorder at end of count.

Monitor: Built-in loudspeaker with volume control.

Construction: 19" x 5 $\frac{1}{4}$ " rack panel with plug-in logic cards.

Size: 19 $\frac{1}{4}$ " x 5 $\frac{3}{4}$ " x 9" deep.

Weight: 19 lbs.

PIP PULSE SEQUENCE GENERATOR, Model TE853

Function: Generates pulse sequences for skip-framing and response coding. Used in conjunction with TE901.

Size: 6 $\frac{3}{4}$ " x 5 $\frac{5}{8}$ " x 2 $\frac{3}{8}$ " deep.

Weight: 2 lbs.

PIP VISUAL CASSETTE, Model 202

Function: Carrier for Super 8 film used in PIP system.

Capacity: Up to 50 feet of Super 8 silent film, 3,600 frames.

Film Loading: Reel-to-reel hubs permit loading with simple winding jig. May also be loaded manually.

Material: High impact polystyrene.

Size: 5.1" x 3.7" x 0.5"

Weight: (loaded with 50 feet of film) under 4 oz.

PIP AUDIO CASSETTE

Function: Carrier for audio tape containing narration and frame advance pulses.

Standard Compact Cassette: With tape for up to 60 minutes play time (in one direction only).

PIP PROGRAM STORAGE ALBUM, Model 301-11

Function: Bookshelf album to store complete PIP cassette program.

Capacity: One PIP Visual Cassette, one PIP Audio Cassette, and program booklet.

Size: 6 $\frac{7}{8}$ " x 9 $\frac{5}{8}$ " x 7 $\frac{7}{8}$ "

Weight: (loaded with one visual cassette and one audio cassette) under one pound.

PIP HEADPHONES, Model TE120

Function: Dynamic headset

Frequency Response: 30-20,000, $\pm$ 3dB

Impedance: 300 ohms

Weight: 12 oz.

PIP CARRYING CASE, Model LCH 2024

Function: Molded luggage-type carrying case for PIP Audio-Visual unit.

All specifications subject to change without notice.

PIP the all-in-one multi-media system!

- Software produced using greatly simplified production methods.
- Low cost film processing. Release prints in silent Super 8 color film.
- No film lubrication required . . . proven "reel-to-reel" reliability within a cassette.
- Choice of most economical frame rates for motion.
- Select any frame rate up to 24 frames per second with perfect sync and with continuous sound—even on single held frames. And, you can have up to sixty minutes of high quality sound.
- Lip Sync!
- Economically add motion to slide or filmstrip programs, or add still sequences to films.
- Only single frames required for titles and other stills!
- Single frame advance without loss of light intensity or focus. Bright, clear pictures!
- Precision registration permits pop-ons, optical matting, overlays, and other effects using single frame.
- Double system . . . no need to go beyond interlock.
- Eliminates composite prints—double system allows you to change either sound or picture cassette for quick and easy update—or to target the program to various audiences.
- Skip-framing . . . high speed frame advance pulsing permits use of skip-frame technique in which selected frames are skipped over and withheld from view to match narration or language.
- Fast forward and rewind on both audio and visual cassettes.
- Pulsed sound track may be prepared in any sound studio or by your own staff.

100 East 42nd Street, New York, N.Y. 10017

Other Norelco Training and Education Products:

- Compact cassettes now in a choice of types for different audio requirements.
- Cassette players and recorders.
- Synchroplayer for synchronized slide/filmstrip presentations.
- Synchrotutor for auto-tutorial learning programs.
- Syncromedia—combination Synchroplayer and slide projector.
- Pulse recorders for A-V program preparation.
- FM wireless systems for multi-channel learning labs and information distribution.
- Electronic educational kits.
- Electronics films and filmstrips.
- Tape duplication services.

MULTI-MEDIA ON A LIMITED BUDGET

Advantages of 3-projector presentation

How to get them for no more than \$500

Multi-media facilitates multi-information. Three visual messages are possible simultaneously on one screen with three projectors.

by J. C. DURHAM, JR.
Baptist Home Mission Board

HOW DO YOU AUTOMATE a wide-screen, three-projector presentation when the budget simply won't allow the purchase of a sophisticated programmer? Does a cost of \$500.00 in addition to the projectors sound appealing? You can do it for that, using only standard products with no electronic modifications.

The equipment used is a stereo tape recorder with a built-in projector change feature (*Uher 8000* with *Diapilot*). This built-in feature is used to control one of the projectors. One down and two to go! The remaining projectors are controlled by a Kodak Synchronizer which uses a 400 cycle tone and a Kodak Programmer which uses a 6,500 cycle tone; both operating on the same stereo track. Narration and music go on the other stereo track. Simple isn't it?

The money invested is approximately \$350.00 for the tape machine, which you would probably need,

regardless of the type of automation chosen, \$50.00 for the Synchronizer, and \$100.00 for the Programmer. The total is about \$500.00.

Confusion arises because of Kodak's designation of their unit as a Programmer. Kodak was manufacturing this device long before today's sophisticated programmers controlling multiple projectors were developed. This device controls just one projector and was designed for use with the program audio as a semi-inaudible tone to change the projector automatically.

Why bother with a three-projector presentation? There is a logical reason, apart from a desire to join the multi-media trend. Our organization is a nationwide agency, supported by more than eleven million church members. Frequently, groups of these people to whom we feel a deep sense of responsibility plan stopovers at our building. The point is: These visitors have a limited

(Above) Kodak Synchronizer using 400 cycle tone and Kodak Programmer using 6,500 cycle tone control Carousel projectors

time, and we want to give them as much information as possible.

A tour of the building is not so informative as with other organizations, because most of the leadership staff travel in their work to more than 100 different ministries throughout the fifty states, Panama, Cuba and Puerto Rico. By the use of a three-projector slide presentation, we show visitors 240 slides in ten minutes.

Deferring to the broadbent theory that attention is given to only one stimuli at a time and that attention-switching time between stimuli may become a factor, we put our information only in the visual channel. The audio accompaniment is appropriate instrumental orchestra music.

Another advantage of putting information only in the visual channel is that adjustments are more easily made. Staff members, names, titles, and specific activities—all are subject to change. A staff change means only a new slide; no change is made in the tape or projector sequence.

What steps do you follow in preparing three projector automation? The complexity of your presentation and the rapidity of the slide changes will determine how detailed your planning must be. A number of hints will be helpful.

A script should be marked to show exactly which projector changes at what time. Sometimes you will want all three projectors to change simultaneously; this is especially effective for panoramic views in which the

(Below) Stereo tape recorder with built-in projector, change feature (Uher 800 with Dia-pilot).

three slides match side by side to reveal one sweeping view. Another time you may want slides to change in rippling fashion from left to right or vice versa; at still other times you may want an "apparently" random pattern. All this should be marked on the script so that the programming operator can become familiar with the presentation by several practice run-throughs.

We have accomplished this rather easily by taping the three-projector remote controls together and then "playing" them piano fashion with the fingers of one hand. It will be helpful if you visualize a strip of quarter-inch tape magnified to cover four of the lines of type you are now reading. Number these lines one, two, three, and four, starting at the top. In stereo record operation the tape machine uses tracks one and three as the tape moves from right to left. When the built-in projector change feature is used, the signal goes on

track four.

The first step in programming is to place the sound for the presentation, music and narration mixed, on track one. Next, connect the Synchronizer from projector "A" and the Programmer from projector "B" through a "Y" connector to the other stereo input channel which will be for track three. Important: Set the recorder in a multi-play mode, or "sound-on-sound" position, allowing you to adjust controls to get a faint pick-up of the music and narration from track one as you record the change signals from the Synchronizer and Programmer. This faint level of sound from track one is necessary to hear the cues for proper projector changes. However, it must be a low level to prevent interference with the change signals.

All volume levels are crucial, and once controls have been set, you should mark their positions. The recorder input volume control should be set to give a full scale meter deflection for the Synchronizer (*plus* three volume units past the zero level mark).

Set the Programmer "trigger volume" and sensitivity at maximum for programming. Now place the tape recorder in the "record" mode and put the signals for projector "A" and "B" on track three. At the same time you are recording a low level of the music and narration mix from track one. Since the Synchronizer is operated by the use of the regular projector remote control you might find it helpful to tape this control just to the left of the trigger button of the Programmer for convenience of operation.

After the signals are recorded, you can actually hear them by rewinding the tape and placing the recorder in the "play" mode. You will also be able to hear the faint signal of the music and narration recorded from track one. Remember, track one still has the original music and narration; it has not been altered. You can connect the speaker output to the track three stereo channel through the same "Y" connection back through the Synchronizer and Programmer to their respective projectors. Be sure to do this in such a way that you can still hear the track three output on the recorder speaker. Otherwise, you will lose your cuing information.

Now you are ready to place the recorder in a special mode of operation (Uher Dia-pilot I or II) which will allow you to record the signals for projector "C". You should be able to select a mode of operation that will enable you to record projector-change tones on track four while listening to the previously recorded tones on track three, along with the faint music and narration—all when the record button is pressed. If you have projectors "A" and "B" connected, they will operate also.

The final step is the pleasure of seeing the au-

tomated program run itself. To obtain perfect synchronization, you need to hear the music and narration and see the first two projectors. For showing, the speaker for track three should be disconnected so the tones will now be inaudible. If you have made a mistake, corrections can be made over portions of the tape, if done carefully; however, you may find it faster to do a complete run-through.

Frequently, we have numerous small groups that require the use of the three-projector presentation many times during the day. To simplify its use, we have installed a master switch for the AC power and placed the sound and signals on a lubricated cartridge tape. A tour guide can walk in and turn on the power switch and push the "play" button on the tape recorder to begin the presentation.

Slide number 81 in each projector tray is blank, and the cartridge tape has a sensing foil placed so that it will automatically stop the tape loop at the point where it is cued for the next program. Kodak now recommends that Carousel projectors be turned off without the fan cool-down period because of possible damage to optical elements from too-rapid cooling. Accordingly, the master switch can be safely flipped off, following the program, and all units are ready to go for the next presentation.

If you cannot adjust your presentation to use as many as 80 slides in each Carousel tray, then fill the remaining spaces with blanks, and program the proper number of signals needed to return each projector tray to zero.

I'm sure you will be pleased with the effort you put into a three-projector automated set-up like the one described. You may even want to label it "PMP Model I," "Poor Man's Programmer," if you can decide where to put the label. Here's wishing you the best of success with Multi-Media on a Limited Budget.

J. C. Durham is Secretary of the Audio-Visual Department, Baptist Home Mission Board, Atlanta, Georgia. Before coming to the Home Mission Board, he was with WSB-TV in Atlanta and at KMTV, Omaha, Nebraska.

You do everything you can to make a film right.

Hugh Zielske sells appliances. He has a hot new one for the kitchen. You made a film for in-store demonstration. But Hugh won't use the film without a fool-proof projection system. Like the Technicolor 610. It features no thread/no wind continuous loop cartridges. Hugh inserts one; turns a switch; and does his own voice-over while the film shows itself. Most important, he gets utter simplicity. Complete reliability. He can leave the film playing and tend to other customers. He can even let customers play it themselves.

Charlie Bungert has to learn to fry burger for a franchise operation. Your sound and color film teach him how. If he has the Technicolor 1000 projector to go with it. Charlie couldn't run a conventional projector. And he wouldn't take the time. If anybody can run the 1000. Charlie simply inserts the cartridge. And plays your film. Until he becomes a burger master.

Now make sure it's shown.

Norm Brown has a film that demonstrates heavy construction equipment. It brings giant earth movers and rock crushers right into a prospect's office. Norm uses the film. Because his Technicolor 100 Projector makes it easy. He wouldn't drag around conventional reel-to-reel equipment. Or keep a customer waiting while he sets it up. But this one, he wouldn't be without.

Irene Hook is an assembly line worker. You made a three-minute silent film that shows her how to insert flange A1 around amplex B and into groove C without breaking the XYZ circuit. If Irene has the Technicolor 510 Projector, all she has to do is insert cartridge A into Slot B and push button C. Irene can do it herself, right on the production line.

.....
 We think any business or instructional film is better off in a Technicolor cartridge. Let us send you a brochure with all the details.

Paradox

STANFORD SOBEL

Slide films are very good business and a very effective medium, but nobody is especially proud of doing them.

THE FIRST SCRIPT I ever wrote was a slide-film. Since that time, not a single year has passed during which I did not write slide-film scripts. Last year, I wrote them for Xerox, Volkswagen, and Sunoco—admittedly not small outfits. None of those particular slide-films, however, cost the client more than a modest four figures, as the bankers say.

On the other hand, I did a slide-film of sorts—a sales meeting opening module—which used 3,000 slides, a special recorded track, eight screens, twenty-four Carousels, eight dissolve units, and a programmer. Although it lasted less than ten minutes, it cost more to produce, than 90 percent of the movies I've written. It's not all low-budget work when dealing with slide-films.

Recently, I received a puzzling letter from an old friend, a film producer who has given me assignments for more than twenty years. The puzzle was in his question—"Do I write only movie scripts now, or do I still write slide films too? If I do, would I work on some for him?"

I highly respect slide-films, and have written dozens of them, but

my friend's letter reflects a very widespread viewpoint. Most people in our business generally regard slide-films with loathing and distaste. I've heard producers—who were literally kept in business by slide-film revenue—say, "I *hate* slide-films!" I've also heard clients say, "I detest the damn things, but they're all we can afford at this cheap chintzy outfit; I guess I'll have to go along until the budget improves."

The negative feeling about slide-films is reflected in an experience I had years ago, when I was first hired by Wilding. I was introduced to a lot of different people at the time—writers, salesmen, directors, cameramen, cutters executives. One man, however, was always introduced to me just as "Charlie Smith" (I'll call him) with no explanation of his job or function. He skulked at the edges of different groups without seeming to be part of the cadres or cliques. Finally, one day I caught him alone in the parking lot, and I asked, "What's your job, anyway, Charlie. What do you do around here?"

He looked around, as if making sure no one was within earshot. Acting as if arrested for indecent exposure on a public conveyance, he muttered under his breath, "I'm the slide-film director, but listen, don't say nuthin', willya? My wife and kids think I'm a *regular* movie director."

Much of that feeling seems to have carried over to modern slide-films from the hackneyed old "gong operas" of yesterday. I've done a lot of thinking about this situation, and have some theories about why this attitude has occurred.

Basically, two major problem areas exist in slide-films—hardware and software. If we could separate the two problems in our thinking, we could produce some great slide-films. Unfortunately, the defects of each area keep slopping over to spoil the other.

I suppose that if we could ever standardize slide-film projectors the

way 16 mm projectors have become widely accepted, we might have a multi-million dollar industry on our hands. However, the hardware is so diverse, constantly in flux and often shabbily engineered and manufactured, that the most avid aficionado becomes discouraged. As soon as a client invests a sizable amount of capital in hardware, another system comes along, and he has to either convert or abandon his units, at great expense and non-productive effort.

Let's assume we could solve the hardware problem. Suppose that overnight—magically—all sour slide-filmstrips were interchangeable just as all 16 mm movies can be shown on all 16 mm projector. Nevertheless, the software problem would still exist.

How do people think of slide films? The trouble is they almost never think of them at all. If they do, it is usually in terms of some other medium. Slide-films are not the "poor man's movie" any more than the magazines are the "poor man's book." Slide-films and motion pictures are distinct audio-visual media just as books and magazines are different printed media. Each has its own conception, methods, economics, writing problems, editing, production and marketing techniques.

Furthermore, use of their unique qualities can result in *great* slide films. The visuals can be as unique as any combination of creative artists, still photographers, and animation cameramen can conceive—and that's pretty unique.

The sound can be as original as that of any other audio medium. People like Dick Bruner are doing remarkable things with totally innovative conceptions of slide-film sound tracks.

The real key to good slide-films is the way we conceive them and the way we think of them. We must begin by treating them as separate identifiable unities, with their own specific advantages, disadvantages

"Paradox" is a monthly column written by Stanford Sobel, a New York based freelance scriptwriter.

values, defects, efficiencies, costs and limitations.

Slide-films are great for teaching step-by-step procedures of trouble-shooting, for presenting a print-ad campaign, for showing a complicated story-board to a large group. They are superb for explaining abstract concepts. They are terrific for explaining how the department is organized.

On the other hand, slide-films are terrible for teaching someone to drive a car. They are useless for inspiring motivation. They are all wrong for instilling organizational loyalty.

I have so much to say about slide-films, slides, and multiple visuals, that I am asking our readers' indulgence, as I plan to continue this subject in *BUSINESS SCREEN'S* next issue.

Basically, however, I think the main thing wrong with slide-films is the attitude toward them of the people who buy them, sell them, make them, use them, and form an audience for them.

Ooops . . .

In the April issue of *Business Screen*, we inadvertently wrote that the movie "Woodstock" had been edited horizontally on a Steenbeck. In fact, it was 5 Kem machines that deserve the credit. Our mistake . . .

MOVIES FROM SLIDES

Your sales story comes alive with camera moves, dissolves, zooms to 3/8" close ups. Slides and art photographed on 8-16 mm film. For free movie kit, film clips, pocket slate, film timetable call (Al Stahl) (212) CO5-2942

BIG MESSAGE . . . SMALL BUDGET?

WHY NOT A FILMSTRIP? There's no faster, more economical, or dramatic way to get your message across. *Complicated story?* A colorful filmstrip can say it for you more clearly. *Restless client?* Let him relax while you project your best image. *A lot of territory to cover?* Filmstrips love to travel. Budget problems are gone! Filmstrips are comparatively economical to produce . . . and can be made to meet impossible deadlines. *Release prints?* One or ten thousand are unbelievably inexpensive. Contact us immediately. We can recommend filmstrip producers on whom you can rely.

Here at CFI your filmstrip producer is backed by a processing laboratory whose professional procedures and facilities produce the finest and the most consistent results possible.

**If it's your
pièce de
résistance,
shouldn't it arrive
in one pièce?**

Chances are you invest a lot of time, money and talent in a film or tape. You produce a masterpiece, then entrust it to less-than-rugged reels, cans, cases.

It doesn't make a whole lot of sense. Especially when we produce a whole line of Plio-Magic film (and tape) handling equipment. It's rugged, lightweight and inexpensive.

You can choose from a complete line of reels. For 16mm, 8mm, Super 8, 35mm, microfilm, 1/4" tape and video tape.

You can choose from a complete line of cans. (To hold all our reels as well as storage boxes for Technicolor-type film cartridges.)

You can choose from a complete line of cases. For films. For filmstrips. Even for Fairchild-type film cartridges.

And, lastly, you can choose from the rest of our line. From our film cores (8mm to 105mm), from our Reel-Pak (self-enclosing reels), 8mm to 35mm, from our idler/drive rollers (8mm to 70mm), and from our linear polyethylene ball-bearings, with ground glass balls.

Send for our catalog. It could just keep you from going to pieces.

Plastic Reel Corporation of America, 640 So. Commercial Ave., Carlstadt, N.J. 07072.

PLIO-MAGIC®

Someday, you'll wind up with plastic.

MUSIC AND SOUND EFFECTS:

Essential tools of the professional
Film Media Producer

"MAJOR" offers you a full 73 hours of background production music for titles, bridges, background—for scoring, editing, recording and dubbing music for you:

- DOCUMENTARIES • COMMERCIALS
- TV FILMS • FEATURE PRODUCTIONS
- SLIDE FILMS • INDUSTRIAL FILMS
- ANIMATION • SALES PRESENTATIONS

"MAJOR" specializes in sound—you get exceptional technical know-how and beautifully recorded original music on LP records or 1/4-inch tape, or on 16 or 35mm Mag. Tape ready for a mix.

IMPORTANT: "Major" owns its own copyrights on all production mood music in its library. World rights available to you on a completely sound legal basis. Re-recording rights on a "per selection" basis or "unlimited use" flat fee arrangement.

Communication is a Two-Way Street

An industrial A/V user

Tells producers how,

and how not to win him over

by STEPHEN A. KALLIS, JR.

FILM PRODUCERS—especially industrial and documentary film producers—pride themselves on being communicators. Therefore, it is extremely important that they remember communication is a two-way thing. Failure to acknowledge this may well cause a film producer difficulty, a point that I would like to illustrate with a recent personal experience.

The representative of a studio that hoped to produce a film for my company telephoned me regarding the matter. My work in the company's public relations department involves me in all phases of the company's film activity.

The caller stated that films were an important medium through which to transmit the company's message. I agreed, but explained that presently, the only films the company was making or contemplating were being done in-house.

Nevertheless, the studio represent-

ative was eager that I see his material. Somewhat reluctantly, I set up a future meeting, almost a week away.

The day came, and the studio representative arrived. He was personable and did not waste excessive time on conversational gambits often used by salesmen. He got right down to cases. Handing me two reels, he explained that these would demonstrate his firm's achievement and potential.

One film was an image piece to "turn on" salesmen regarding the scope of the company they worked for. As an indoctrination piece for newcomers, it wasn't bad. The other reel was a series of television commercials, which showed a certain amount of imagination.

However, even if we had been in the market for films produced out-of-house, we couldn't have used either type. First, our salesmen receive orientation in other ways, and

Communication is a Two-Way Street

are fairly "turned on" without my company's spending an additional \$20,000 for an orientation piece of that caliber. Secondly, my company's products, which are designed for science and industry, range in price from \$6,000 in single units to well over \$1,000,000—certainly not the sort of thing you advertise on local television.

I reiterated that when we did films, we usually produced them in-house, and pointed out that the type film we used were quasi-documentary, which showed how our machines were used by customers.

The representative nodded and said approximately, "Oh, yes. We could make that type film too." He described his studio's facilities. We parted on a friendly basis.

Reviewing the incident, I am struck by the many things the representative might have done to improve his selling chances. The steps are so simple that anyone would profit by following them.

1. LISTEN. When the studio representative called me, he did not pay attention, or want to pay attention, when I told him the company has an in-house capability for producing motion pictures (in fact, that I headed it). Here, he should have paused to take stock.

It is a fact of life that an in-house unit can usually produce a film at less expense than can an outside studio (please note, I said "less expensive," not "better." The latter depends, in part, upon what type film is being considered). If he decided to press his case, the representative's whole presentation should have been based upon why the company should use his studio, rather than on why films are nice to have.

2. RESEARCH THE TARGET.

From the representative's presentation, I am uncertain whether he even tried to find out about us and what would be important to us. Neither in our initial telephone conversation nor during our meeting, did he ask what type films were in our library; I volunteered this information at our meeting.

This is particularly frustrating because he had a week in which to find out. Within easy driving distance was one of our sales offices. At least, he might have stopped by to pick up some of our product literature to determine our interests. He might even have struck up an acquaintance with a salesman to determine whether he had ideas regarding what would make a good film.

He could have checked *Dun and Bradstreet* or *Moody's Industrial Review*; particularly in the latter, there is a good breakdown of major industrial concerns from which he could ascertain our interests.

3. TAILOR YOUR PRESENTATION.

Based in the points already discussed, determine how you're going to reach a potential client. Obviously, the representative didn't do his homework. But even from the scanty information he received from the telephone conversation, he should have concentrated on trying to sell the features of his studio (whatever they were—I found out nothing but size) that could not be matched by an in-house unit. He might have suggested positive things I could use, but which a company unit could not afford (for instance, a front projection unit) because it would be used only occasionally.

4. KEEP YOUR EYES OPEN

To reach me, the representative had to pass through production area. When he arrived, he did not ask about what he had seen. In addition to showing an interest in the company, (always a good political move), it might have given him a clue (or if he had done his homework, an *additional* clue) as to what we were interested in.

5. LOOK FOR OPPORTUNITIES.

By the end of the second reel it should have been obvious that my company is not interested in the types of film he had brought. He did not ask what we were using regarding films, and a response of "we could make that type of film" is not a positive enough response (I might claim I could produce an other *Ten Commandments*, but delivering it is another question.) If his studio had done any sort of documentary that might fit our requirements more closely, he should have volunteered to bring it out for a showing. In this way, he would also have gained a second crack at us. If not, the representative should have known when he was beating a dead horse.

I believe that the representative's studio may have decided to seek new business via the "Shotgun" technique. Someone made a list of industries that could afford a film and began contacting them. Once having made that first step, however the studio—through its representative—failed its most important test as a communicator. The production company never received communications concerning what we might need (or not need), nor were they able to communicate to us why we should use them.

If and when my company ever decides to use an outside producer, it is doubtful that we will use that particular studio—but not because we are angry or annoyed. We prefer to gamble on a studio that tries to understand us. Is that too much to ask?

What are you waiting for?

If it's your film...
then you haven't heard about
Newsfilm Lab's 168-hour work week!

To: Filmmakers
From: NEWSFILM LABORATORY, INC.

For years, our beat-the-clock scheduling and quality performance have made us Southern California's leading processor of newsfilm. We have direct phone lines to many of our TV accounts. And at one time or another they have all used our Pool Lab Service. At such hot news events like the Manson trial, where one camera is allowed, newsmen can depend on us to deliver prints to the other stations under split-second deadlines.

Our new climate-controlled building has just been completed...total laboratory equipment and rental production facilities all in a compact one-stop location. That makes Newsfilm big enough to have such technological advancements as the latest ektochrome processors and sensitometric equipment to monitor color control...yet small enough so that you'll soon know most of our staff by name.

"Instaservice" - where your reservation and our three processors combine to mean No Waiting. When we say your film is in the dry box and will be ready in five minutes - we mean it. Speed and quality never mean rigidity, however. We're specialists in force processing, low contrast and underdevelopment services.

Write or call for our price list; visit our handsome new facility or let us tell you how your account can be effectively serviced by mail.

NEWSFILM LABORATORY

516 N. Larchmont Blvd. Los Angeles, Calif. 90004

HO 2-6814 Days • HO 2-8292 Nights Weekends Holidays

P.S. As a special get-to-know-each-other offer, and to celebrate the opening of our new building, we're having an Ektachrome promotion. We'll process your 7252 Ektachrome film (normal processing), plus one light 7389 color work print with key numbers printed, both for 14¢ a foot.

This offer is good only through September 30, 1971.

Special Section Business Screen Magazine

BLACK FILM PRODUCTION IS "Hi-Noon"

GAM FILMS COMPANY is unique to Chicago and rare in the United States. There have only been three such Black production film companies in this country that have produced 35 mm color commercials for television. GAM is a Black production company in Chicago with the professional, technical staff to not only produce television commercials, but documentaries (the latter represents the film activity of many small shops), training films, and feature shorts. Although it is important to have a Black shop with professional capabilities, the company does not concentrate on producing only Black-oriented films.

GAM concentrates on contractual filming—that is, developing film contracts based upon approved scripts. The company has the capacities for production (through release print) and producer services (that include coordinating pre- and post-production activities.) The company is also available for test spots.

GAM as a company has produced numerous films and photographic productions, ranging from a 16 mm color documentary on Kenwood High School, to a 35 mm color television commercial for Operation Breadbasket. This public service commercial requested contributions to support the program, which feeds the poor and hungry of all races, and was aired on seven channels.

GAM Films was founded in 1966, and was originally located at 130 North Wells Street, in Chicago's Loop. In 1968, the

office was moved to its present location at 607 East 104th Street.

From 1966 to the present, GAM crew and members have been involved in advertising, filmmaking, television and stage productions. The experience of GAM's owner and principal officers bring a total of fifteen years to the business.

The motto of this unique company is "A Hi-noon Production Company." Accordingly, they are available to the industry during the evening hours, thereby offering an opportunity to the industry when many creative shops are still working.

GAM FILMS IN ACTION

ACROSS OUR DESK...

ITEM: The National Office is pleased to offer two new program ideas with enough material to keep you supplied most of the year.

1. Now Available, the *Cindy Award Winning Films of 1970*. Last year some chapters opened each meeting with one of these films, while others made a full night or two of it.
2. Tape recordings (or cassettes) are available of the outstanding speakers from the *11th Annual National Conference at Newport Beach*. Members who could not attend this conference may now share the experiences, knowledge, and priceless exchange of ideas available through this medium.

Information is our business and the exchange of ideas is the reason for membership in IFPA. You will receive a program packet listing films and tapes available in the very near future.

another service of your friendly board of directors.

ITEM: The first directory of film and television festivals ever published is currently available by contacting *Back Stage*. Listing almost 400 festivals held annually in the United States and abroad, the new directory will include complete information on all events; where they are held, how to enter, what the fees are, what the awards are... and more.

Filmmakers, TV stations and groups wishing to enter have had to rely on mailings from the festivals themselves or sporadic listings in various publications.

The new directory provides one central source of information about global film and TV festivals for use by producers, advertising agencies, production companies, colleges, TV stations and libraries.

Pre-paid pre-publication orders are being taken now at \$8.00 each. *Back Stage*, 165 West 4th Street, New York, N.Y. 10036.

Free TV Film Catalog

A catalog of films sponsored by business firms, trade associations, government units, professional societies and other organizations for public service on television is available from Modern Talking Picture Service.

Write: Modern Talking Picture Service, 1212 Avenue of the Americas, New York, N.Y. 10036.

UCLA Film Catalog Supplement

The 1971-72 University of Southern California Film Catalog supplement is available. It's wide range of alphabetical listings by topic and title makes the listing an easy one to use.

Write: University of Southern California, Division of Cinema, Film Distribution Section, University Park, Los Angeles, Calif. 90007.

FIND OF THE MONTH . . .

Basic Motion Picture Technology by I. Bernard Happe offers a well-rounded and fundamental survey of film technology and its application in television. Presupposing little technical background, it begins with a chapter on the principles and history of film and television, and includes chapters on applied image—basic photography, characteristics of the photographic image, picture recording, sound recording and reproduction, studio production, film processing, and duplicating methods. The book also contains an effective chapter on presentation.

A good review for those in many areas of the motion picture/television fields, and a good reference source for those entering them, the book costs \$10.00 and is published by Hasting House Publishers, Inc., New York, N.Y.

About Audio-Visual

"Miracles of Magnetic Recording"
1 minutes
Impex Corporation

ORIGINALLY PRODUCED ON video-tape, this film traces the rapid growth of magnetic recording as a tool in radio, television, industry, space, data processing and consumer use. "Miracles" illustrates basic principles of magnetic recording through cartoon animation.

"Underground Film"
3 minutes
Paul Marshall Film
ICI Films, Inc.

"UNDERGROUND FILM" is a documentary of the underground film that demonstrates the experimental and improvisational nature of this growing art form. This film focuses on filmmaker Chick Strand, a young woman well known in her special field.

"Flicks I"
27 minutes
National Educational Television
Indiana University
Audio-Visual Center, Distributor

"FLICKS I" traces the evolution of motion pictures from a simple shadow on a wall to modern movies, and includes a history of the development of the movie camera, film and other photographic inventions.

"Flicks II"
27 minutes
National Educational Television
Indiana University
Audio-Visual Center, Distributor

"FLICKS II" outlines the history of animated cartoons from the hand-painted hand-run picture sequences shown in France in 1892 through the invention of movie film. Early works of Walt Disney and other animators are included.

You can take it with you.

The Fairchild Seventy-21 Super 8mm cartridge sound movie projector is a portable rear-screen and front-screen (optional) attache case-sized projector that sets up in seconds. Remarkably simple to operate, the Seventy-21 uses the continuous loop "pop-in" MoviePak® cartridge to eliminate all threading and handling of your film.

The Fairchild Seventy-21. A compact portable projector that you *can* take with you.

Anywhere.

The new 16 mm stop-motion telecine sound projector, the L-W Athena 000-TSM, offers versatility for television film-chain applications. Among

a built-in 50 Hz pulse generator that enables anyone to make fully automatic sound/filmstrip presentations. It also features "Automatic Stop" and "Automatic Advance" modes. These allow the showing to continue uninterrupted, or to stop while the picture remains on the screen without sound advance, until the advance button is pressed.

Screens

Colored Rear Projection Screens

Rear projection screens in three new colors are being offered by Panel-graphic Corporation. In addition to the standard "Pearl Gray," the Chromascreen CS-140 is produced in "Mist Green" and "Quartz Blue."

Continued on next page

Standard features are instant still/run capability, flickerless projection and unlimited hold on single frame. Additional features include pushbutton control, remote control of all functions, and frame rates of 1 to 24 frames per second.

Super-8 Sound Projector

The newly-announced Bauer T30 Super-8 sound projector can show super-8 with or without magnetic sound and has a built-in sound mixing control that allows superimposing of sound on pre-recorded sound. Automatic reel-to-reel film threading and forward and reverse

Running speeds at 18 or 24 frames per second are controlled electronically by a single-phase motor. The projector also has Isco-Kiptagon 1.3/15-30 mm zoom lens and a quartz-iodine bulb with "cold-light" mirror.

Cassette/Filmstrip Projectors

Standard's new model 1001 RP cassette/filmstrip projectors feature a full record/playback cassette system with

Looking for A Great Multi-Media Presentation Tool?

Here Are TWO!

You don't have to be a professional to create, direct and produce a professional attentionholding sound slide presentation. These Montage systems have the professionalism built right in.

Which makes them perfect for creating scores of powerful presentations for many purposes — for all types of organizations to show (and tell) new products and services or to show (and tell) new ideas and campaigns; for companies participating in industrial shows, exhibitions, demonstrations and the like; for company public relations programs; for sales staff use in showing company services or products too bulky or heavy to carry around — the possibilities are endless.

Programs can be changed easily to adjust to new campaigns and exhibits. Select the one that best suits your needs. Both use endless-type cassettes for repeating presentations.

Montage/Narrator 1000

Specially designed for rugged environments, semi-permanent needs and heavy duty use. Can be integrated with your Kodak remote-control slide projector. Complete unit \$349.95

Montage Audio/Mate

Ultra portable and highly compact. Designed to operate with all remote-control slide, filmstrip and stop-frame motion picture projectors. Weighs only 4½ lbs. Complete unit \$189.95

Write to Montage today, Dept. BS-671 on specific ways to faster, more economical presentations.

Three Surfaces From Da-Lite Screen

Da-Lite is offering three picture-surfaces for its Deluxe Model B projection screen, which comes with automatic Tensionizer to hold the picture surface flat and a magnetic attachment to help eliminate keystone by tilting the screen. The three picture surfaces are White Magic glass beaded fabric for darkened rooms non-gloss Ma White fabric for use with overhead projection, and Wonder-Lite silver lenicular surface for rooms with ambient light.

Lights

Light-weight Soft Light

A new seven-pound soft light for location shooting has been announced by Lowel-Light. From only two 500 watt lamps, the Lowell Unit provides 64 foot-candles, and is bright enough

to use as a key or fill. Accessory barn doors shield the camera lens and permit subtle shading. Unfolded, the unit is 21 by 23 inches, but when closed can fit into an "attache case" 28 by 16 x 4.

Multi-Media Coordinators

Multi-screen A/V Control Package

A complete multi-screen audio-visual control system is now available from Spindler & Sauppe, Inc. for a package price of \$3,450. The system includes a 27-channel "media mix" LC programmer, three Dynamic dissolve controls compatible with either Selectroslide or Carousel projectors, a power relay box for operating up to three motion picture projectors, and all the necessary accessories and patchcords. With the system, four dissolve speeds for slides are possible. Components may be bought separately at a non-package price.

Multi-media Programmer

RSVP, Inc. has announced a new four-channel device to control three slide projectors or dissolve controls and an 8 or 16 mm motion picture projector. The model PD-4 program director, used with a reel-to-reel or cassette stereo tape recorder, can program in sync with the presentation sound track. Solid state circuitry eliminates programmer error or false signals during encoding or decoding. The PD-4 measures 6½ inches by 9½ by four, and weighs less than 6 pounds.

Show/Corder Announced

A new solid state cassette sound slide synchronizer, the Show Corder, has been announced by Tiffen Optical Company to provide automated sound, slide shows with existing remote con-

trol slide projectors.

The synchronizer, which is battery operated, loads with standard compact cassettes and remotely activates Kodak Carousel, Sawyers, Airequip and other slide projectors.

Pulser/Reader, Electronic Crossover Available

Two new models of programming equipment for multimedia presentations and display control systems have been announced by A-V Services, Inc. The Pulser/Reader, with any stereo tape system, can pulse and read out four channels or functions.

A new electronic crossover can cause two projectors to alternate, advancing one, while the other is lit, thereby eliminating the "black" between slides when one projector is used. It can also be used as a 20 Amp-power switching circuit.

Kalavox Sound Slide System

A new Kalavox sound slide system, model 391, is now a part of the Kalart Victor Corporation line. The new unit sits atop a Carousel or Ektagraphic slide projector to provide up to one minute of audio playback for each slide.

The new model combines a 2 x 2 inch slide with ten feet of audio tape in a single audio slide cassette. Despite changes in the sequence of cassettes, synchronization is assured. The Kalavox tray holds 40 cassettes and will be available in late spring.

Featuring . . . Norelco PIP

The gap between sound motion pictures and slide or film strip presentations has been bridged with a major

breakthrough from Norelco. The PIP (Programmed Individualized Presentation) Audio and Visual Cassette System uses separate audio tape and Super-8 film cassettes electronically coupled in synchronization. The tape moves at a constant speed, while the film moves at predetermined speeds appropriate to the action— from one to 24 frames per second. Accordingly, less film per presentation need be used.

Separation of sound track and film into cassettes, allows for easier less expensive duplication. The system also offers fast forward and reverse controls to advance or rewind the film to a particular part of a program without having to view it in its entirety.

BUSINESS INFORMATION DIVISION

JUL 20 1971

1971 Audiovisual Equipment Buyer's Guide

It's amazing what you can still buy for \$10,000.

When your company is trying to make an impact with its message, \$10,000 doesn't go very far these days.

It could buy you one page in a national magazine with limited circulation.

Or a one-minute spot on network TV. (Class D time, of course.)

Or maybe a few ads in a newspaper.

And that's it. Finished. You've shot the budget.

But take heart. There's still one medium where your company can buy a whole year's program for \$10,000. A medium that's so versatile, you can tailor it to pinpoint the audiences you want to reach. So that every dollar works twice as hard.

We're talking about business sponsored films.

Through Modern's seven highly-developed channels of distribution, we can take your filmed message and put it where it will do the most good. Consistently.

More important, we can do it many different ways.

For example, with \$10,000 a year you can reach 5 million TV viewers, and 200,000 members

of school and adult groups.

Or, if you like the prestige of being seen with top-name feature films, we'll bring your story to 2.5 million theatregoers.

Or maybe you want to reach community leaders, students, and people who travel. We'll introduce you to 250,000 of them—at their own request!

And that's just a sample of the flexibility and impact you can buy with a year's sponsored film program.

If you'd like to know more, give us a call. We'll show you how far \$10,000 can really go.

Modern Talking Picture Service, Inc.

Introducing: The Videocorder.

A. TWO INDEPENDENTLY CONTROLLED AUDIO CHANNELS B. SOLENOID OPERATED PUSHBUTTON CONTROLS
C. VARIABLE SLOW SPEED STILL CONTROL D. AUDIO CHANNEL 2 DUBBING E. VIDEO SIGNAL INSERT (CUT IN & CUT OUT)
F. VIDEO SIGNAL ASSEMBLY G. ROTARY FRAME HEAD H. COLOR ADAPTER CONNECTOR I. REMOTE CONTROL CONNECTOR

new Sony EV-320F

It pays back in the playback.

The Sony EV-320F Videocorder is ideally suited for program origination applications where high quality pictures and sound are essential.

Meet the new Sony EV-320F Videocorder... the TR unit conceived for you! It's a 1-inch program origination machine that gets your taped programs off on the right foot.

With features like capstan servo electronic editing and an all-new rotary erase head, the EV-320F allows you to tape your material from other tapes, or off-the-air; or live camera...and insert them into your pre-recorded tapes with perfect synchronization.

Just think. You can add...or delete your scenes as you require...and get professional results. Without taking a course in electronics! A unique DD feature lets you assemble new scenes onto your tapes without losing sync sequence. And with two audio channels at your disposal, you can add sound on one track...independently...without affecting the audio portion of the other track.

You'll find the EV-320F a ready and willing performer, thanks to the Sony-designed tape transport and electronics systems. They've been field-tested to the most rigid specifications to assure you of optimum results. Each and every time.

And when you're ready for color...so is the EV-320F. Just add the optional Sony Color Pack

CLP-1B and you'll receive a clear, stable NTSC color signal.

Reliable...proven in the field...the Sony EV-320F is ready to prove that it's the *better* 1-inch machine. We'll be happy to prove it to you...just mail the coupon today.

INTERLOCK PROJECTOR

The tremendous versatility of the interlock projector, which was demonstrated over the years by the Siemens 2000, was carried to the ultimate in the design of this highly refined machine.

As a single system sound projector, the SONOREX is as fine a unit as you can get—and with its built-in 16mm interlocked magnetic deck, it is ideal for double system synch previews, original recordings, sound transfers, and many other practical and creative sound film jobs. In all its functions, the SONOREX is outstanding for its mechanical, optical and audio quality. It is the time-saving, money saving answer to a wide variety of daily production problems.

Sound partnerships, Arriflex-style

Arriflex users expect the highest possible levels of reliability, performance and versatility from their equipment, and they get it.

Now the Arriflex standard of excellence is brought to other areas of filmmaking, with the introduction of the new Arrivox-Tandberg Recorder and the Sonorex Interlock Projector. Both machines exemplify the Arriflex philosophy of superb quality precision engineered to handle a wider range of applications more efficiently. With the Arriflex name comes the security of knowing that factory trained technicians, on both coasts, will back up and maintain your equipment throughout its productive lifetime.

P. O. Box 1050, Woodside, N. Y. 11377

ARRIFLEX
COMPANY OF AMERICA

ARRIVOX-TANDBERG RECORDER

Priced at only \$1095, this professional recorder offers an ideal combination of capabilities and economy, thoughtfully designed for operational simplicity and speed. Two microphone inputs, with pre-amplifiers for dynamic microphones, switchable to built-in power supplies for condenser microphones, individual speech/music selector and limiter switches—automatic start mark oscillator and footage counter... It's all here, coupled with convenient straight line threading, a tough cast magnesium frame, temperature compensated servo drive system and solid state plug-in printed circuits for endurance and easy maintenance. The Arrivox-Tandberg has all the quality and features you will ever need... at considerably less cost.

Eastman Kodak Unveils New Marketing Education Center

A new 360,000 square foot Marketing Education Center, comprising four buildings, has been opened by Eastman Kodak Co. at Henrietta, N.Y., a Rochester suburb. The Center is expected to train about 16,000 customers, dealers and company sales and technical personnel during 1971 in the use, sales and servicing of Kodak products. A permanent administrative and training staff of 200 will serve in the new complex. Audio-visual facilities are extensive, with batteries of motion picture and slide projectors automatically controlled from a lectern. A motion picture studio has complete facilities for almost any kind of production. Laboratory technicians will be trained in Kodak ME-4 and ECO-3 processing workshops. Several hundred cinematographers and lab technicians are expected to be trained at MEC each year.

Sponsored Film Research Institute Opens This Month

A national institute devoted to study of the sponsored film in America will be held at George Eastman House in Rochester from July 25 to 28.

Intended for representatives of film sponsoring and production agencies, the National Institute of Film and Social Response will "articulate principles and procedures underlying creation of effective films which are intended to inform, persuade and energize."

Director is A. William Bluem, Professor of Media Critical Studies at Syracuse University. Staff members include professors in communications and cinema at other leading educational institutions.

Ampex Instavideo Cartridge Meets EIAJ Standard

Ampex Corp. has announced that its Instavideo system designed for education, industry, government and medicine will meet EIAJ (Japanese Electrical Industry) standards, making it compatible with several other recently announced video cartridge systems.

Instavideo will be battery or current operated. Designed by Ampex, manufacture will be by TOAMCO, an Ampex-Toshiba joint venture in Japan. Delivery target late 1971.

Arriflex Delivers \$200,000 Order to F&B/Ceco

F&B Ceco, a large professional motion picture equipment dealer with stores in New York, Florida and California, has purchased 37 new Arriflex cameras for its rental department. The new equipment will join 150 Arris already on hand at F&B.

Acquisitions and Mergers:

Consolidated Film Industries, Hollywood, has acquired **Acme Videotape Laboratories**, giving CFI full capabilities in both film and tape image recording and reproduction.

Republic Corporation and **Glen Glenn Sound Company**, Hollywood, have agreed in principle on the acquisition by Republic of Glen Glenn.

Technicolor, Inc., Hollywood, and **Movielab, Inc.**, New York, have agreed in principle to merge.

Camera Mart, Inc., New York, has acquired **Stage 54 West**, a large sound stage facility in the heart of New York's film production area.

Fifty Producers at CFI Seminar

An Advanced Techniques Film Seminar for non-theatrical film producers, the fifth in a series, attracted a full house at Consolidated Film Industries just prior to the recent SMPTE Convention in Los Angeles.

The seminar staff included such leading technical men as sound recording expert Loren Ryder, cinematographer Charles G. Clarke, producer Laurence Mascott, editor Frederick W. Berger, music specialist Jack Meakin and CFI department heads Jerry McMinn, Dale Tate, Robert W. Casey, Ted Fogelman and president Sidney Solow.

Openings will soon be announced for future Advanced Techniques Film Seminars.

Audio-Visual Training School

A new training school for Audio-Visual Technicians will be set up early this summer at Hutchinson Area Vocational Technical School, Hutchinson, Minn.

The school, to be administered by Douglas Hedin, formerly of Harcourt Brace Jovanovich, will offer a two-year course preparing students for repair and maintenance of audio-visual equipment in industrial concerns and educational institutions.

Fifty Million See Firestone Films in 1970

Ten Firestone Tire & Rubber Co. films reached fifty million viewers last year. This brings the total audience films in the past ten years to 375 million.

The most popular film was *Every Wheel That Rolls* with 78 telecasts and group showings.

Short Takes:

Hollywood Valley Film Labs is now a west coast representative for **Videumate Film Protective Treatment** and **NO-EN Treatment**. . . **Ampex Corp.** is delivering \$40,000 worth of one inch helical scan VTR equipment. **Combined Insurance Co. of America** (Chicago) . . . **Consolidated Film Industries**, Hollywood, and **Bebell Color Labs**, New York, are both now offering silver sound track service on Ektachrome Type 7389 16mm release film. . . **Consolidated Video Systems** has been established to produce equipment employing thermal transfer duplication of videotape.

Moves:

Modern Talking Picture Service has moved its general offices to 4 Nevada Drive, Lake Success, N.Y., a New York suburb. Executive and sales offices will remain at 1212 Avenue of the Americas, New York. The move will provide space for expansion and development of an on-line computer booking system for the entire country.

Consolidated Film Industries has opened offices at 540 Madison Ave., New York, and at 333 North Michigan, Chicago.

KEM Electronic Mechanic Corp. has moved to new spacious quarters at 255 Park Ave., South, New York.

Manhattan Sound Studios has opened "The Pad" at 17 East 45th St., New York, a mixing studio with many interesting innovations, including a special slide and motion picture film changer permitting mixing from a large screen TV set.

Charles Fuller Productions, Tampa, Florida, has closed its fixed base studio and moved into a 32-foot highway building with complete 16mm production facilities including sync interlock. The company also operates a videotape mobile van. Both can be rolled up to the client's door during production operations.

Some inventions start whole new industries.

This is one of them.

The Model T Ford made cars available to the millions.
The pocket-size paperback made books available to the millions.

And now, The RCS MODULE System makes audio/visuals available to the millions.

It consists of a pocket-size cartridge with up to half an hour of MotionStripTM pictures and sound together—and a format fit for every producer. Plus a portable projector—with its own TV-size screen—that also provides wall-size images, operates fully automatically, or stops whenever you want it to.

They add up to the most compact sound/film cartridge and projector you can find. And we sell it all at half the price of any comparable system.

We are making our cartridge format available to any producer. Any library of materials can be converted to it. Already, RCS has gathered rights to the largest sound/film library in the world.

In business and industry, the RCS MODULE System is usable for sales presentations, for displays in retail locations and at trade shows, for employee training and recruitment programs.

In education, the low cost, efficiency and versatility of our system make it ideal for large group instruction in classrooms, for teaching crafts and hobbies, and for pre-school and adult education in the home.

Good reasons, all, why the RCS MODULE System is reaching—and teaching—the world.

paradox

BY STANFORD SOBEL

PARADOX: The film business may not be a way of living, but is certainly a way of life.

I NEVER THOUGHT I could write the words of the above paradox, because of an early experience I had. When I was first making the painful transition from Detroit to New York, I was sort of commuting between the two cities, which emphasized their differences. Conferences in Detroit were always very business-like and straight-line . . . Here's what we want! . . . Here's how we want it done! . . . How soon can we have it? . . . and so forth.

But a New York script conference used to confuse me . . . What do you think of this point of view? . . . Suppose we take a posture of spontaneity? . . . What are the ethical imperatives of this particular corporate perspective? . . . and so forth. Conferences in Detroit were like mass production technologies. But conferences in New York were like college bull sessions . . . and no more productive.

Looking back in time, it was all very logical, but it took me about five years to catch onto the fact that practically nobody in New York really meant anything he said. It was just a way of impressing the other people in the room with his cerebral capabilities.

The most spaced-out meeting of my memory was during discussion of a slide-film for a linoleum maker. The senior writer (for the producer), and the ad manager (for the client), actually spent a full morning, a three hour lunch, and half the afternoon discussing whether the phrase in the script should be "The American way of life" or "The American way of living." They were fools, the discussion was nonsense, and it inhibited my use of the phrases for years . . . up until this column in fact.

Regular readers will recall that I tried to make two major points about slidefilms in our last issue . . . Number One, the hardware has never been standardized, and Number Two, you have to think about slidefilm as a separate and distinct medium, with its own advantages, techniques, drawbacks, and freedoms.

Now, whatever slidefilms may or may not be, they can never be a good medium for presenting an abstraction like the American way of life, or living, or what have you. These two Madison Avenue types were certainly talking about the subject in terms of million dollar movies, probably *bad* million dollar movies!

On the other hand, this particular subject cries out for multi-media presentation, in which slides and stills would certainly play a very important role. I am now involved in the planning sessions of an exposition which will use multi-media to depict the American way of life, and we're using some 6,000 slides in dissolve units, a Motiva program, a kadeidoscopic combination of twelve screens, both vertical and horizontal crawls on wide-screen filmstrip, and movies at 35mm, techniscope, and 16mm anamorphic. Furthermore, we don't even feel confident we'll be covering our subject adequately because we're limited to ten minutes in length, and how can you cover the American scene both adequately and fairly in only ten minutes?

One thing you can put your money on . . . you're not going to do the job in a fifteen minute filmstrip for a linoleum manufacturer, in which you also incidentally have thirteen minutes of linoleum selling and two minutes of political philosophy.

It is my own personal conviction that if you try to use the wrong medium to tell your particular story, you will end up by denigrating the very values you are trying to communicate . . . not to mention wasting all that nice available budget.

Experiences like these have led me to the theory that the film industry as a whole is a sort of microcosm of the American scene. That could easily be the most pretentious statement of the year, so I'd better clarify the analogy.

Our industry has its own different strata of vertical success . . . with levels called entertainment, educational, documentary, television, industrial, and amateur filmmaking. And within the vertical arrangement, we also have different horizontal compartments of success . . . critical success, economic success, aesthetic success, intellectual and academic success, and even over-and-under-achievement success. In fact, you can name your own favorite type of arrogant snobbery and you will find examples within the film business.

All analogies are dubious, but the analogy between U.S. society and the film industry holds true right on down to the fact that we both are experiencing a generation gap, with young people taking off on their own tangent when it suits their psychic needs.

Although there are some people in this industry who earn a very great deal of money, and others who earn extremely little, or even none at all . . . there is a bond between us. All filmmakers are in fact living a certain way of life. The world of film is a separate sub-culture within American Society . . . a specifically identifiable way of life.

I have met some people in this industry who might just as easily be grocery brokers or book publishers . . . people who happened to drift into the world of film by gravitation . . . through a friend, a contact, a relative, a casual meeting on the subway . . . but most of them drift out after a while. The committed filmmakers are different . . . they have a certain sense of dedication . . . of excitement about their work . . . of pleasure in doing just exactly what they're doing . . . of looking forward to finishing up this picture so they can start on the next. And if you told them they had to get into some other kind of work for economic or health or professional reasons, they would stare at you as if you were daft.

I'm fortunate that I get to a lot of different meetings of film people all over the country, (and also in other parts of the world). Nobody could mistake the gatherings of film people for any group in other industries.

"Paradox" is a regular feature column written by Stanford Sobel, a New York-based freelance scriptwriter.

last month I attended the 1971 Congress of American Writers at Town Hall. Believe me, the audience could have been almost any kind of group . . . professors, executives, salesmen, retailers. But as a group they could not have been filmmakers, although there were many film writers in the audience. Film people simply are distinctive, and they live differently.

Immediately after the Writers Congress I went to Seattle for the Fourth Motion Picture Seminar of the Northwest. The group was distinctive . . . they were film people. They also happened to be writers and directors, cameramen, business executives, teachers, brokers, retailers, mechanics, and salesmen, but if you had picked them up en-masse and transported them to Dallas or Miami or New York, you'd have identified them as filmmakers of Dallas or Miami or New York. Making films was their way of life, which they happened to conduct in the Pacific Northwest.

One night we looked at three solid hours of experimental films produced by Seattle filmmakers. Some were great and some were mundane, but none of them were specifically Seattle . . . they were all specifically motion pictures made by people to whom making films is a way of life . . . although it may also be a living . . . better for some than for others no doubt. Here are the things they talked about . . .

Bob Primes on the independent cameraman, John Korty on the auteur, Sylvia Spring on low budget features, John Urie on commercials, Tom Beemer on location shooting, Dick Koler on computerized animation and half a dozen other people on every aspect of hardware, sound, opticals, you name it.

I talked about scriptwriting, and although I've spoken from a great many platforms about movies and writing, I never had a more knowledgeable audience.

Every speaker will tell you that a good audience is a participant in the event, not a passive listener. But the response in discussions outside the actual hall revealed even more clearly the nature of the people who are moved to make films as their profession. People like Marvin Albert and Laszlo Pal, David Mann and Tom Kirkman, Bob Nunley and Les Davis, and no column would be long enough to list them all.

They're all film people because that's what they have to be . . . they have to do what their nature requires of their talents. For them, as for many of us, they are makers of film in the world of film . . . It's a way of life.

You do everything you can to make a film right.

Hugh Zielske sells appliances. He has a hot new one for the kitchen. You made a film for in-store demonstration. But Hugh won't use the film without a fool-proof projection system. Like the Technicolor 610. It features no thread/no wind continuous loop cartridges. Hugh inserts one; turns a switch; and does his own voice-over while the film shows itself. Most important, he gets utter simplicity. Complete reliability. He can leave the film playing and tend to other customers. He can even let customers play it themselves.

Charlie Bungert has to learn to fry burgers for a franchise operation. Your sound and color film can teach him how. If he has the Technicolor 1000 Projector to go with it. Charlie couldn't run a conventional projector. And he wouldn't take the time. Anybody can run the 1000. Charlie simply inserts the cartridge. And plays your film. Until he becomes burger master.

Now make sure it's shown.

Norm Brown has a film that demonstrates heavy construction equipment. It brings giant earth movers and rock crushers right into a prospect's office. Norm uses the film. Because his Technicolor 800 Projector makes it easy. He wouldn't drag around conventional reel-to-reel equipment. Or keep a customer waiting while he sets it up. But this one, he wouldn't be without.

Irene Hook is an assembly line worker. You made a three-minute silent film that shows her how to insert flange A1 around amplex B and into groove C without breaking the XYZ circuit. If Irene has the Technicolor 510 Projector, all she has to do is insert cartridge A into Slot B and push button C. Irene can do it herself, right on the production line.

.....
 We think any business or instructional film is better off in a Technicolor cartridge. Let us send you a brochure with all the details.

The New Media Master 1200 Offers These "Firsts" For Your Multi-Media Presentations

- The First Multi-Media Programmer to include a programming console, stereo cassette recorder and dissolve control unit in a single, portable case.
- The First Multi-Media Programmer designed and priced to be a practical sales tool.
- The First Multi-Media Programmer designed with room for expansion — six extra programming buttons permit the addition of six single or six pairs of projectors later.
- The First Multi-Media Programmer to include dissolve, animate, flash, superimpose and fade functions in a single case.

The Basic Media Master 1200 controls for slide projectors and a movie projector or five slide projectors.

TO COMPLETE YOUR AUDIO-VISUAL SYSTEM, THESE COMPONENTS ARE ALSO AVAILABLE FROM CSI:

MEDIA MASTER 150 — A truly professional projector stand which permits fine adjustment of pitch, roll and yaw for 2 or 3 Carousel or Ektagraphic projectors. Its rugged precision construction insures near perfect registration of images superimposed on a single screen.

AUDION 360 — A heavy duty, cassette sound synchronizer. Audio power more than sufficient to fill a large room. Synchronizing signals advance projector to the next slide without fail — no missed or repeated signals.

AUDION 370 (See the AUDION 370 at NAVA in July.) — A cassette sound synchronizer which advances up to three projectors individually or simultaneously. Permits wide screen impact with quality and versatility for an unbelievably low investment.

A-V Equipment in '71:

How the Dealers See It.

What the audio-visual dealer has to say in this report about his business and about the equipment he sells is important to the industrial A-V buyer because it gives a good indication of the directions other A-V buyers are taking now, and will be taking in the months to come.

There is a feeling of guarded optimism in the audio-visual equipment business at mid-year 1971. Dealers interviewed by BUSINESS SCREEN during the past month report that sales of equipment to business and industry are again picking up after a slow period in 1970.

Allan Armour
Projection Systems International

"I'm very optimistic about business this year. It's up here in the midwest," said Robert R. Hiller, of Midwest Visual Equipment, in Chicago. "Industrial activity began to quicken about the first of the year and it seems to be continuing. Educational business is just holding on, but that's probably because we're working harder on it to discover new customers."

In New York, Allan Armour, of Projection Systems International, reports that 1970 was the biggest year in PSI's history. "Volume was way up, and 1971 looks even better," Armour said, "but I'll have to admit that profits did not match the sales curve. The manufacturers are putting the squeeze on us, raising our costs, but keeping list prices the same. Our business is almost all industrial; we make very few school sales—school systems are very poor payers in this area. Everything is on bids. You get paid in six months if you're lucky but you have to pay the manufacturer in 30 days."

In Ft. Lauderdale, Florida, Ray Franklin, of Cook Consultants, decided last year that his company should spend more time on industrial sales, with indications that school sales were bound to be off in 1971, Cook Consultants made a big

push in this direction at the beginning of the year. "Of course, the business market, itself, was down during the first quarter, so we got caught up in a little backlash, but things look much better now. Business will be having to do more training than ever before, and business is

Ray Franklin
Cook Consultants

very much aware of the importance of A-V techniques in training—much more so than the schools are.”

In Washington, D.C., where there is little industrial activity, A-V equipment dealers have suffered from a slowdown of government appropriations. C. T. Chandler, of “The” Film Center, has a lot of orders on the hook, pending government actions. “Some of the agencies here are still trying to get by with equipment that’s 25-30 years old. There should really be some kind of standard depreciation policy on projection equipment.

“Our rental business here is very good though. We have a great many conventions with a constant need for all kinds of projection equipment of every kind. We keep a big stock and we keep it busy.”

Taylor Hoynes, Jr., of Colonial Film & Equipment, in Atlanta, described his industrial equipment business as being on a constant increase for several years. “Southern industry far surpasses the schools in modern technology and equipment for training, and the demand for custom-made programs with permanent equipment installations is growing in 1971,” he said.

With this favorable prognosis for the equipment business in mid-year 1971, it’s interesting to note what industry is buying.

Taylor Hoynes finds that industrial A-V customers in his area are moving more and more toward multi-media programs—mostly sound/slide and sound/filmstrip with three to eight-channel programming. He finds a puzzling drop in Super-8 equipment. Why? It seems like industry is interested in doing some of its own production, which is not too difficult for filmstrip and slide, but there is not the time nor the qualified personnel available to sit down and produce their own motion pictures. “We see the PIP and RCS type of pulsed filmstrip/motion pictures as coming, but there is no recognizable interest just yet.”

Allan Armour finds good sales records for both Super-8 (“new products need the excitement of motion pictures”) and the sound filmstrip. “We have recently sold \$150,000 worth of La Belle Courier 16 filmstrip projectors to IBM,” he said. “They consider this to be an excellent machine. They can do a

sound and picture cartridge for less than \$10. It doesn’t replace motion pictures, but for their purposes, it’s just great.”

Armour’s company has moved a large quantity of Fairchild Super-8 projectors, and finds much interest now in Sony half-inch color VTR with the inexpensive new color camera. Other good sellers are the Ektalite screen, programmers, tape duplicators and great quantities of under \$20 cassette players. Burlington Industries, for instance, has equipped each one of its salesmen with a player and sends out sales training material on a regular weekly basis.

C. T. Chandler says that despite predictions he has heard that industry was moving away from 16mm motion pictures toward Super-8, it hasn’t been evident in the Washington area. Along with the audio cassette recorder, the 16mm sound motion picture projector is a best seller. Videotape recorders are priced out of range, he finds, and lack of compatibility is a serious hindrance to their wider use.

Ray Franklin has also found that video sales have fallen. “Nobody is going to spend any appreciable amount of money in a video studio with one kind of equipment and then find out later that they might have got something essentially similar at one-eighth the cost.”

Super-8 sales are up phenomenally in Florida, and 16mm is doing very well, too. “I expect this is because there is still a good supply of 16mm software,” Franklin said. “People feel that 16mm is going to

stick around for quite awhile.

“We’ve had tremendous success with Audiscan,” Franklin continues. “I think filmstrips may eventually go to 16mm as a standard. Another item our industrial buyers are using is the Coxco synchronizer with Crousel—you cannot go wrong with this basic stuff.”

In Chicago, Robert Hiller believes that the most significant trend in equipment sales has been the great surge in audio cassettes. “They have brought a tremendous new interest to our business and given us a whole new area to work in. Some day there may happen with video cassettes, but right now everyone has his own ballpark—we don’t know which way is going to go.

“Synchronized do-it-yourself filmstrips and slides have developed new markets among small users, and industrial A-V men with quick problems to solve are using them extensively,” Hiller said.

Everyone interviewed decried the lack of standards. Allan Armour said, “We literally had more standards a hundred years ago than we have today—you could look at your stereo cards on any viewers. You can’t do anything like that today.”

Ray Franklin hopes the EIA standard for video recorders is a meaningful advance. “They say you can play a Sony tape on a Panasonic machine, and vice versa, but not everyone is convinced.”

What is coming up? The dealers interviewed think the next decade will be the most exciting yet. Allan Armour looks for almost everything to be miniaturized and battery-powered, lighter, cheaper, easier to operate. “All this will go with as big screens as you want—whole wall, in fact. And business will take the lead in utilizing all these new tools.”

Robert Hiller has similar thoughts. “I believe in the industrial market. Not only as good business for me, but I think the whole country will be better off because of the audio-visual tools that business will be using.

“And I’m glad to be a dealer,” Hiller said. “There is a strong need for dealers willing to provide service and experience and interest for industrial customers. We can encourage industry’s way and speed its performance. And that’s a pretty good thing to be doing.”

Our guarantee is 8 months longer than our closest competitors.

A lot could happen in 8 months.

If you're considering an automatic super 8 movie projector, you should know the facts.

All of them. Like how long is the guarantee. What kind of service you can expect. Facts about the machine's performance.

We at MPO would like you to know the facts. Because we're sure that once you know them, you'll choose our projector.

But, first things first. First, get the facts.

IAVA:

What price technique over content?

Key speakers at annual IAVA
meeting score glamor at the
expense of communication.

By OTT COELIN

IAVA officers discuss meeting with hosts in Ottawa. L-r: Gerard K. Hall, National Cash Register Co., new IAVA president; Graeme Fraser, Crawley Films; Lee Coyle, Ohio Bell Telephone Co., 1970-71 IAVA president; James G. Damon, IBM World Trade Corp., IAVA program chairman; and Margaret Marshall, Crawley Films.

Lee Coyle, Manager of Audio Visual Aids, Ohio Bell Telephone Company, and 1970-71 president of the Industry Audio-Visual Association told members meeting in Montreal on May 4-7 that the audio-visual profession has fallen victim to "tunnel vision"—the pursuit of the seductive glamor of show business at the expense of the very necessary disciplines of communication.

"Through delight in the marvelous contraptions and gadgets at our command," Mr. Coyle said, "we too frequently permit ourselves to be entrapped by spectacular light and sound shows that degrade the reputation of visual communications. . . all too many of us have undertaken the multi-media journey into the realm of sensuality, a realm that is by nature alien to intellectual perception. We inundate thought with color, anesthetize the intellect with a riot of sound and frenzy of movement."

Mr. Coyle's message, as outgoing IAVA president, highlighted the Annual Spring Meeting of the organization at the Queen Elizabeth Hotel in Montreal, the 25th such event attended by the men who direct corporate audio-visual communications activities for many of the largest U.S. business companies.

From its founding session quarter-century ago, when Paul Lawrence became IAVA's first president in Chicago (1947), this group of highly professional a-v directors has held its official sessions in various U.S. cities, only once before going abroad for a special tour of Canada's lively EXPO some five years earlier. So this 25th annual meeting also marked another milestone as IAVA met outside the U.S. for its first official session of that kind, acknowledging the interest of many of its member companies in their overseas trade. James G. Damon, Jr., Film Activities Manager, IBM World Trade Corporation, arranged the Canadian program, assisted by a most competent program committee.

"Audio/Visuals in Canada" was the logical theme of the Montreal meeting, highlighted by equal program time given the Canadian government-sponsored National Film Board of Canada and its manifold a-v activities and a special visit to the complete "in-house" facilities of

Centre de Radio-Canada scale model. IAVA members inspected construction site in Montreal.

ned Crawley Films Limited at Ottawa. Some 55 members, a good many wives and a number of corporate guests and prospective members attended.

The keynote address at Montreal was given by Professor James A. Beveridge, York University (Toronto). Prof. Beveridge is director of York's Program in Film, Faculty of Fine Arts and a former consultant in film to the Ministry of Information and Broadcasting, Government of India as well as a former director of the North Carolina Film Board and Film Advisor to the Arma Shell Oil Company. Like many other Canadian film people, Beveridge is also an alumnus of the Film Board, having served as head of its London Office.

Largely concerned with the progress and some lack of it of audiovisuals in formal education, the keynote speaker frequently referred to an impending report, made possible by Bell Telephone of Canada, on the future for audiovisuals in education. He cited the confusion existing as between perception and verbal understanding and the proliferation of "too many" tools and the little realization of educational values.

Turning to IAVA's official business, the organization has elected Gerard K. Hall, Director, Audio-Visual Services, National Cash Register Co., Dayton, Ohio as its new president. 1st vice-president-elect is Harold N. Read, Director, Audio-Visual Activities, Liberty Mutual Insurance Companies, Boston; 2nd vice president for 1971-72 is John P. Tierney, Head, Graphics Section, Standard Oil Co. (N.J.) of New

F. R. "Budge" Crawley, one of meeting hosts, with program chairman, James G. Damon.

Speaker Sidney Newman, Canadian Government Film Commissioner.

IAVA members inspect animation equipment at Canadian production facility.

York. Richard H. Joy, Manager, Audio-Visual Dept., Burroughs Corporation, Detroit, continues as Secretary; Assistant Secretary for the coming term will be Frederick P. Barker, Manager, Audio-Visual Services, Del Monte Corporation of San Francisco. Vice-President of Illinois is Robert McCaslin, General Supervisor, Communications/Services, Caterpillar Tractor Co.

The organization's veteran Executive Secretary and Treasurer continues to be Frederic J. Woldt, Waukegan, Ill. Among the regional directors-elect named at Montreal are Robert E. Carlson, Manager, Graphic Arts, Sunstrand Corp., Rockford, Ill. (Central Region); Takashi Murakami, Superintendent, Audio-Visual Communications, Pan American World Airways (Eastern); and Ray Hollingsworth was named Western Region Director. Clyde Wood, American Cast Iron Pipe Company a-v executive, is program chairman for IAVA's fall meeting, scheduled for Birmingham, Alabama.

The show moved into high gear, from the viewpoint of useful information and broad inspiration to film-makers as IAVA travelled to the enlarged facilities of the National Film Board. Welcomed to these quarters by Mrs. Daisy de Bellefeuille, who directs Film Board press and public relations, members learned that "the National Film Board is the only film production company entirely supported by Government that has the freedom to make exactly what our film-makers feel they want to say, even if it criticizes the Government or whatever social situation.

"We grew into the large monster you now see and, of course, we became tops in documentary filmmaking. We have been making anything that it is audio-visually possible to make: covering drama, TV, education, animation, etc. And we have been winning an average of about 70 awards per year across the world.

"We have tried to innovate and experiment—in a way no private producer would be able to. Now there is a private film industry in Canada—which again has been helped by Ottawa who have set up a lending money agency—and the Film Board is no longer the only film company in this country."

The afternoon sessions at the Film Board were most enlightening as five separate presentations took the IAVA group into recent experiments in Canada using video playback/recording gear and the use of cable television; computer-controlled animation; application of still imagery in documentary and exhibition formats; and a very frank analysis of the future of EVR and tele-player equipment.

Noted NFB producer Colin Low took time from his busy schedule to head a panel discussion of the video recorder/playback experiments on cable t.v. which began in Newfoundland and Nova Scotia under the working title of "Challenge for Change." This experiment brings telecasting techniques down to the community and inter-community level as economically distressed areas of Canada achieved free expression through candid use of small video recorders and their subsequent appearance on local channels via cable. The program continues and appears to have achieved real goals of better understanding in these early aspects.

Readers of BUSINESS SCREEN have already been told of the potential of the computer-controlled animation stand. The Film Board has taken this equipment into new areas of presentation. Animation chief John Pley cited and showed, as an example, Sidney Goldsmith's educational film, *Fields of Space*, created with this equipment.

In the late afternoon, as an extremely pleasant "au revoir" to IAVA, members were guests of the Film Board at a cocktail reception in its Board room and met Mr.

Sydney Newman, Commissioner of the NFB.

In a semi-private talk with Mr. Newman, your correspondent learned that a very sound reason for the Film Board's survival through annual budgetary reviews at Ottawa lies in its self-sustaining operation. In recent years, revenues from services, film sales and rentals have been sufficient to meet its total costs in Canada and abroad. That, of itself, is a real achievement as the visitor glimpses new construction and a payroll into the hundreds.

As Commissioner Newman recently asked: "what is the price of membership to belong to this family?"

And he has replied: "film-makers, like other artists in a social milieu, respect their role of being leaders of public opinion. In the Film Board they accept the further fact that there is no way of separating the freedom they enjoy from the Board's right to determine its own policies and work practices. *This is the adult privilege of responsibility, of the price of membership in the Film Board.*"

Ott Coelln, center, Business Screen founder, discusses meeting activities with IAVA group in Ottawa.

Two comfortable buses, replete with box lunches, took IAVA members off to Canada's capital: Ottawa on Thursday, May 6th. Greeted at the studio doors of Crawley Films Limited in that city immediately after lunch enroute, they saw and heard the "private enterprise" side of Canada's film story. For nearly three decades since "Budge" Crawley and his wife brought the world the beautiful images of *The Loon's Necklace*, Crawleys has gone it on its own. And its film output has covered nearly every continent in location and sponsorship; served nearly every leading

sponsor and agency in Canada and many in the U.S.

Today, as Crawley vice-president Graeme Fraser told the group, the film company has complete in-house facilities for every phase of filmmaking, storyboard and original writing/research through final laboratory processing under its control of ultimate screening print.

Members and their wives toured both new and older studio facilities visited the laboratory, artists' studio and animation rooms. Stage facilities formerly at the Fairmont Avenue headquarters have now been enlarged and occupy special buildings some distance from this base.

It was our special pleasure to renew a long acquaintance with Graeme Fraser and other friends at Crawley Films, to recall through our many years of reviewing and association in industry-wide matters, we have never seen a "bad" picture turned out by this company.

How useful were these first two international sessions of IAVA at Montreal? A first, basic contribution of such gatherings of men who have everyday responsibilities for communication in many of the U.S. corporations is the opportunity for inter-personal exchange on similar problems, results achieved on techniques and tools. That phase alone would serve most of the men who attended with real benefit.

At Montreal, Jim Damon's well-arranged program moved along swiftly and often reached new high points of information and inspiration: showing how much the same are the problems and interests of Canadians and how they are forged ahead with audiovisuals.

Another high point was the "new member" introductions, which require these candidates to "produce" an audiovisual report on their internal activities.

And for us and our readers, we pass along Gerry Graham's well-phrased "law" for every audiovisual communicator:

"Never enter a new area of technology unless you can AUDIT the consequences." Think about that relation to the many new tools now being offered for projecting audiovisuals. And think about another precept: "what you use to project the message is 1,000 times less important than what you *have* to project."

It's the big meeting. You've got six slide projectors, a 16mm film, walls of sound, house lights to dim and a touchy audience.

You hope you've got it all together. Know what you need?

Well, we make 'em. Weighs just ten pounds. Guaranteed to take the sweat out of those fast paced, multi-image presentations you'd like to produce. No more worries if so and so's going to blow a slide change. Because we do it all automatically.

The heart of our system (The small miracle) is the Media Mix Programmer. It uses simple, standard eight-hole computer tape. Can control three multi-speed dissolve systems (six functions each) plus nine auxiliaries. That's twenty-seven programming channels altogether.

Works with the rest of our system to give you the most professional, most versatile presentations in the business. Cuts, short and long dissolves, fades, supers, and two-step animation effects. It also dims lights, controls curtains, runs the show and recycles. Our systems are all solid

state. So they're durable, modular. And it doesn't take a gorilla to move them around. They'll take shipping across the country, too. And they deliver. Always.

One other thing. You'll have to be willing to pay a lot less than you'd expect.

For all the information, ask your local S&S dealer or write Spindler & Sauppe, Inc., 13034 Saticoy Street, North Hollywood, California 91605. (213) 764-1800.

The small miracle.

MEDIA MIX PROGRAMMER Spindler & Sauppe

A Look Inside Eastern Europe Film-Making

Al Bruch reaches for his passport at Checkpoint Charlie as he prepares to enter West Berlin.

Lab executives find Russians mix both old and new ways in film production.

by ALFRED E. BRUCH, President
and
JACK J. CLINK, Sound Director
Capital Film Laboratories, Inc.

Having recently returned from an exchange visit to five film studios in Europe, four of them behind the Iron Curtain, we found it most interesting to see that producers in Europe make motion pictures in much the same way we do in this country. However, they stress the large studio concept, whereas in the U.S. we are gradually getting away from huge sound stages and massive studio lots. When we accepted an invitation to join a group of film and recording executives—as part of a Citizens Exchange Corps visit—it seemed like an excellent opportunity to find out how the production methods of our European counterparts compared with those in the United States. Our visit was a reciprocal one based on hospitality our CEC leader had given to Soviet audio specialists in the fall of 1969 (John Woram, the CEC leader, is a recording engineer for a major New York record producer).

The first studio we visited was Mosfilm Studios in Moscow, where we received a warm reception. In order to brief us thoroughly, the studio showed us a b/w 16mm picture that explained some of the highlights of Mosfilm's motion picture production. We looked at several reels of their award-winning film, *War and Peace*, which was filmed in Russian color negative and printed on their color positive. The few reels we saw indicated that it was an excellent production.

During our visit to Mosfilm, our

hosts were Fyodor F. Provorov, Director of Photography, Michael Z. Wysotki, Deputy Chief Engineer, and Alexander A. Khrushev, Sound Technique Division Director. They conducted us on an informative tour which ended with a very pleasant discussion in their offices over coffee and cognac.

Mosfilm Studios employs about 5,000 people, and has a sound department comprising 300 people. The studios produce roughly 25 pictures a year in b/w and color, and print 35mm and 70mm release. Pictures to be released in 70mm are also shot on 70mm negative we were told. An average of 25 pictures a year from all foreign countries are dubbed into Russian. *It's a Mad, Mad, Mad World* has recently been dubbed, and Mosfilm was currently in the process of negotiating the rights for *West Side Story*, which they were looking forward to as being a very successful Russian release.

All of Mosfilm's camera equipment and sound equipment is manufactured in Russia. They did have a few Model C Bell & Howell printers in the laboratory and had recently acquired a vacuum tube Hazeltine color analyzer. One thing of particular interest to us throughout Russia is that in all the studios the sets are very well constructed and some are very ornate. We saw some very beautiful replicas of palaces, and their actual production itself is quite elaborate, with big casts and large crews, similar

to our productions prior to World War II. It is obvious that they do not pay the high salaries that the motion picture industry in the U.S. has become accustomed to, and thus they are able to continue with these methods. The studios as well as the theatres are state owned.

In Leningrad our group visited Lenfilm Studio where we were very cordially received by Josif N. Alexandrov, Chief Engineer. At the time, they were filming a picture of Franz Liszt in Eastman color, which was being processed in Budapest, as the Leningrad laboratory was only equipped for 35mm b/w processing. While the studio is not as big as Mosfilm, it does have seven sound stages and employs about 2,000 people. As time was running out, we couldn't spend as much time on our visit to Lenfilm as Mosfilm. However, we were taken up to the optical as well as the camera department, and saw some of the equipment being checked out, and the design work being done on new equipment. Among the new equipment in manufacture is a remote control camera boom with TV monitor and control desk. The operator sits apart from the boom and operates the camera, and follows focus as well as controlling motions of the boom.

Lenfilm produces approximately 25 pictures per year and dubs 25 foreign films in Russian. The dubbing technique is very similar to ours before we automated it. They still use individual loops the same as we did be-

ore we had the rollback system, which they are aware of and are very interested in installing.

From Leningrad we went to East Germany and visited the old UFA studios in Potsdam which is now called DEFA Studios. This is one of the largest studios in Germany and the oldest. Marlene Dietrich, Max Reinhardt and Karl Freund are products of this studio, which should speak for itself. We visited some of the sets and again noticed how elaborate they were. In touring the stages we noticed one particularly elaborate set which resembled something we would use for the American picture *2001*.

In the processing department we saw new 70mm background projectors. These pieces of equipment were very beautifully built. Due to the time limit we did not visit the film processing laboratory. We were very well treated by Professor Wilkening, Director of Production and Technique.

We noticed for the first time that this studio can buy what equipment it chooses from various countries without having to manufacture its own or buy strictly behind the iron curtain.

Potsdam has been practically rebuilt since the end of World War II, at which time it was totally demolished. In its reconstruction they have tried to retain the appearance of the original buildings so the town looks very much as it did many years ago.

From East Germany we went to Prague, Czechoslovakia, and here we spent a full day at the Barrandov Studios. We were hosted by Executive Producer Petr Capek. This also is quite a large studio and they showed us some very elaborate plans for expanding into approximately double its present size. It is located a short distance outside of Prague on a high plateau overlooking the city, and all of the editorial rooms open out on a beautiful landscape view. We visited one of the sets where they were shooting a waterfront cafe scene to play back. An interesting thing was the fact that the camera was on a dolly and the dolly track had a 90 degree curve in it which enabled them to go around a beam on the set. The sound people on this set were all women, and we looked up and saw that an electrician who was moving a big light also was a woman.

We visited the editorial department, which is a different building set off from the rest of the studio complex. Each editor—and again these were all women—had her own individual editing room fashioned like a small apartment, with French doors on one side which open out onto a patio. There were a few other touches of home in these editorial rooms, such as potted

plants, pictures on the walls, a small kitchenette, and the ever popular coffee pot. We noticed the editorial equipment here and at the other studios was of the flat desk type and the film moves horizontally, similar to the Steenbeck. All equipment used in this studio—cameras, sound equipment, editorial, processing, etc.—is manufactured by a supply company inside the organization of Barrandov Studios. Again the workmanship seemed to be excellent, and as their equipment is available for export sales, we were given an equipment catalog. We were particularly impressed by an edge numbering machine of rather unique design.

We had lunch in the board room and met Jaroslav Fiala, Chief of the Technical Department, and several other engineers. They expressed a desire for technical information from the West, which they had not received for the past eighteen months, and we promised that we would do our best to gather the available technical manuals and forward them to Barrandov through the Czech Embassy in Washington. This we did and we have received an acknowledgement that the material was received intact.

Jack Clink observes 300-year old bronze bell, one of the world's largest, inside the Kremlin.

The afternoon was spent mainly in their sound department where we saw dubbing facilities and rerecording facilities, scoring stages, portable sound trucks that carried 35mm magnetic recording equipment—all of their own manufacture. Mr. Capek explained that most production is in b/w because of the high expense of color. We were amazed to find out that they make very few prints, possibly not more than 50, because they just service Czechoslovakia. Many very noteworthy pictures have been made at this studio, among them "*Closely Watched Trains*," and the Academy Award winning "*Store on Main Street*." We were very impressed by their special effects department, and their facilities which are available to foreign producers. We saw some American Western barroom sets, as

well as covered wagons on the back lot.

An interesting sidelight is that there is a very definite separation between motion picture studio theatre production and television. Television has its own production facilities and uses 16mm. The features that do go on television are projected in 35mm. Television production is mostly documentary and news. There is no videotape at all connected with the studio. What little there is is strictly in the television studios.

Our travels behind the Iron Curtain were arranged and supervised by Intourist, a very efficient government operated tourist bureau. Many appointments were made by them, in addition to the arrangements made in advance by the CEC with various studios, as well as our guides acting as interpreters when needed. These guides were always efficient and courteous. We had all of the freedom anyone could ask for.

After we finished our twenty-one days behind the Iron Curtain, we decided to visit Munich for a rest and a visit to the Arriflex factory where we were greeted by Klaus Bockmann. He in turn took us to the Bavaria Film Studios in the outskirts of Munich, primarily to see the ARRI processing installation. In this big laboratory there are 25 processing machines. Being all of the same manufacture and color, they gave a very startling appearance as we walked in. An interesting thing was one of the processing machines had been in this laboratory since prior to World War II and was evidently still doing a very good job.

At every studio we visited we found the personnel to be extremely courteous and quite willing to sit down and exchange ideas. It seemed that except for the language barrier we could more or less work side by side with the film production people of each country.

All in all, our film studio tour was a valuable one for all who participated. It showed us how we can help our counterparts in Europe, in improving their film production and processing—and it opened our eyes to the availability of some interesting equipment ideas and possible savings for our clients.

We would sincerely recommend that other film representatives—producers, sound and recording experts, equipment salesmen, and specialized SMPTE committees—made a point of visiting these studios.

We will benefit in two specific ways: through helping creative film people produce a better product for their publics—and gaining a real appreciation for the similarity of our production methods.

Super-8 Boosts DuPont Sales

Salesmen use Super-8 projectors to establish record sales results for "Zerex"

Du Pont's salesman, Charles K. Messick (left) presents product story using super-8 to M. H. Upter, buyer for Eckerd Drug Co., Newark, Del.

When Du Pont introduced its revolutionary Anti-Leak "Zerex" anti-freeze nationally two years ago the company's automotive products marketing department was faced with the interesting problem of how best to dramatize the new product's story.

"We had a product story that had to be seen to be fully appreciated," reflected Marshall A. Stephens, marketing manager. "We wanted to make sure that every one of our 125 salesmen explained it the same way without taking too much time."

The problem was effectively solved through audio-visual presen-

tation. Du Pont produced a ten-minute super-8 film, called *The Tested One*, which explained the product's chemistry. In addition, it described consumer reaction in the previous year's test market and the money-back guarantee the company was offering.

The film was previewed at the group's April sales meeting. Salesmen's reaction was enthusiastic. They were advised that, upon arriving home, individual portable Super-8 projectors would be awaiting them for their own use.

"We felt that film was the only technique available to effectively

demonstrate the sealing action of the polymers," Mr. Stephens said. "Coupled with that, it certainly enabled the salesmen to present the information more clearly, concisely and dramatically."

Du Pont selected a unit manufactured by Bohn Benton, Inc. which weighs only 17 pounds. The smart-looking case is the size of an attache case for the convenience of sales personnel, and can be carried onboard a plane, if necessary.

"It took only a few seconds to set up the projector in the retailer's place of business," says Charles K. Messick, Wilmington-based salesman and spokesman for the automotive products group. "The automatic push-in cartridges were simple to use, and the sound film on the 9" x 12" built-in rear screen gave my calls a show business quality—even in full room light."

The Du Pont salesmen started making customer calls in mid-April and continued them through the buying season. Then, starting in August, Du Pont alerted consumers to the product's leak-sealing capabilities by heavy use of a television commercial. The combination of informed retailers and pre-sold consumers paid prompt dividends.

"Despite the fact that both national brand competitors eventually announced fibrous-based anti-leak in 1969, our sales were up 30 percent over regular "Zerex" the previous year," Mr. Stephens said. "Our increase was 15 times that of the nearest competitor."

Because the company had already invested in the audio-visual equipment, and because the first effort had been so successful, Du Pont turned to film again the next year. Their second 10-minute effort, *The Guaranteed One*, detailed results of the successful product introduction included results of lab, taxi and independent testing, and re-emphasized the money-back guarantee offered.

What happened? Since so few retailers had received consumer complaints the previous year, they didn't need convincing. They bought. For those who raised a question, the 10-minute film eased their concern. It helped greatly to add up to another record year for Anti-Leak "Zerex" anti-freeze. And two more problems solved by the portable Super-8 sound projector.

FOUR STAR LINEUP

A.V.E. XLP-16 JR. "BIG REELER"

Run up to 2½ hours on the new 16mm "Big Reeler" attachment compatible with all A.V.E. 16mm projectors. Shown here atop the A.V.E. X-300 optical/magnetic projector, the two produce a unique long play high intensity package that sits solidly on an ordinary projection table. The combination features a xenon ozone-free long life bulb (5400°-6000° Kelvin), magnetic playback and electric rewind.

A.V.E. "1200" CAROUSEL SLIDE PROJECTOR

Its side door access means you don't have to turn your show upside down to change a lamp. Its new 20 hour quartz projection lamp means you get more than twice the light over the ordinary Ektagraphic slide projector. Its hi velocity blower system keeps your show cool. Includes remote control, 80 glass slide capacity, forward & reverse, remote focus, zoom lens and carrying case.

A.V.E. 16MM CANARY

Don't worry about poor film, bad splices or torn sprocket holes with this 16mm optical/magnetic projector. Its automatic loopsetter corrects trouble immediately. Don't worry about light, either. Its quartz halogen lamp produces a screen brightness of more than 700 lumens. Features forward & reverse and built-in fidelity speaker. Completely portable. Available with remote control, record amplifier, Marc 300 light source and "Big Reeler" attachment.

A.V.E. TELECINE 16MM PROJECTOR

Here is flickerless projection in a small portable package that is ideal for broadcast and closed circuit television. Runs forward and reverse, slow speed and stop frame without harming film. Features optical/magnetic playback, automatic loopsetter and solid state sound system. Available with remote control and "Big Reeler" attachment.

New Eclair ACL: half the size and half the weight!

Sync sound and silent running in a camera that weighs 8½ pounds and is less than a foot long.

Ken Nelson has made a short documentary film with an ACL. "In the past, I've always looked around for a place to rest the camera between shots," says Mr. Nelson. "But with this new one, I found it didn't occur to me to put it down."

With its 200 foot magazine and without a lens, the ACL weighs less than 9 pounds and measures 11½ inches from front to back. Half the size of its competitors. Less than half the weight.

This is the most *inconspicuous* camera on the market. It's completely silent, of course. Hand-held, it's much smaller and lower than your head, as you can see. The bat-

tery weighs about a pound and fits into your pocket.

And the ACL is *fast*. You can change its clip-on magazine in less than five seconds. No threading; no need to touch the film at all. Film maker Eric Saarinen says: "This is the first silent camera that you can run with."

The ACL has a crystal-control motor. Sync sound with no connection whatever between camera and tape recorder. Fantastic accuracy. Sync error is less than ½ frame in one *continuous* 200 foot take. That's 8,000 frames.

What else? A universal lens mount that lets you use any lens

with any mount. Extremely bright and precise reflex viewing, with a viewfinder that rotates 360 degrees. And a price that's considerably lower than the competition.

For more information, ask for our free ACL brochure.

16MM MOTION PICTURE PROJECTORS

ALLIED IMPEX CORP.

Four models of the Bauer P6 are available. P6 Auto 300 (optical, or optical-magnetic) is self-threading, has GE Marc-300 lamp. Change-over device permits continuous showing of long films with two projectors. P6 Automatic optical-magnetic has similar features without change-over and Marc 300. P6 Synchron has synchronous motor and manual threading, is designed for production use. P6 Studio is double-band conventional projector interlocked with magnetic tape deck.

ARRIFLEX CORP. OF AMERICA

Sonorex Double 16 interlock projector has halogen lamp, cam-driven transport system, is capable of recording, transfer, mixing.

A.V.E. CORP.

A.V.E. X-300 has a xenon 5400 K light source. A.V.E. Canary is magnetic-optical with quartz halogen light source. Interlock and continuous models also available.

BELL & HOWELL CO.

Five basic models ranging from the heavy-duty JAN 614 CEM (optical-magnetic) through the 566T Autoload Film-sound (quartz arc lamp), 552T and 545T Specialist Autoload, and 540T Specialist Film-sound with manual threading.

THE CAMERA MART, INC.

Royal 16mm Manual and Self-Threading models use new GE or Sylvania ETL200 halogen lamps, and can be converted to Marc300 or Colorarc. Modular construction.

EASTMAN KODAK CO.

Several models of the Pageant projector are available featuring arc or tungsten lamps, and up to 25-watt sound for auditorium use.

GRAFLEX DIV. SINGER CO.

Six models offer such variable features as arc and tungsten light sources, insta-load threading, high audio output and optical-magnetic capability.

HONEYWELL, INC.

The F16 has manual threading, 1000 watt lamp, 15 watt amplifier.

INTERNATIONAL AUDIO-VISUAL INC.

I.A.V.-MS-860 is manual threading, optical sound, has 1000 watt lamp, 15 watt amplifier, runs at sound and silent speeds. I.A.V.-MS-862 is also magnetic. Other models have Xenon and halogen lamps.

KALART/VICTOR CO.

Seven models are available offering options of magnetic and optical sound, varying light sources, including Marc

300, snap-out reels, color coded threading. Kalart/Victor Moviematic models are repeater projectors with built-in screen.

LAFAYETTE INSTRUMENT CO.

Analyst AAP-300 provides stop-motion capabilities for individual frame inspection.

L-W PHOTO, INC.

Various models of analytical projectors with variable speeds. 224-Athena has precise speeds of 1 to 24 fps. plus sound at 24 fps. Also TV film chain projectors.

NORTH AMERICAN PHILLIPS CORP.

FP 16 (magnetic or optical) features arc or xenon lamps, 20 watt amplifiers, 5000 ft. capacity reels. Designed for permanent installations.

PAILLARD, INC.

Bolex S-311 and S-321 (optical-magnetic) have 1000 watt lamps, variable speed with stroboscope.

W. A. PALMER FILMS, INC.

PGSS magnetic/optical interlock projector based on the Graflex, with recording playback and transfer capabilities.

VIEWLEX, INC.

Several models are available, including the Super 1600 with manual or automatic threading, easy set-up, solid state sound system. 1600 HL is designed for large audience use. (Viewlex 1600 models were formerly manufactured by RCA). Also available is the Cine Sound 16, a 16mm sound film viewer with built-in screen. The JAN 2-3-4 are heavy duty projectors built to joint army-navy specifications.

SUPER 8MM MOTION PICTURES PROJECTORS

ALLIED IMPEX CORP.

Bauer T30 has auto threading, quartz lamp, 18 and 24 fps. digital counter, 10 watt output.

BOHN BENTON INC.

Institor is a cartridge-load, 20-minute capacity, magnetic sound projector in attache-style case with built-in screen. The Bohn Benton Console has similar operating features to Institor but is housed in a permanent fixture case, useful for point-of-purchase, retail stores, showrooms, etc. Control panel locks to prevent tampering.

DE JUR AMSCO CORP.

Remote Command can be stopped and started by remote control and advanced frame by frame. Eye Fidelity magnetic sound projector comes in playback only and record/playback models.

A. B. DICK CO.

Model 60—5-minutes running time,

continuous loop cartridge, magnetic sound, built-in 3 $\frac{3}{8}$ " by 4 $\frac{1}{2}$ " screen.

DU KANE CORP.

Model 28A8 has 150 watt quartz lamp. For magnetic and optical sound tracks.

EASTMAN KODAK CO.

Instamatic M100A projector has magnetic sound, 150 watt lamp.

FAIRCHILD CAMERA & INSTRUMENT CORP.

Fairchild/Eumig 711 will take Kodak cassette-type cartridge as well as conventional reels. Model Seventy-21 is a magnetic sound projector in attache-style case with built-in screen. Model Seventy-31 is a console projector with similar features to Seventy-21.

KARL HEITZ, INC.

Carena 8S8 has 100 watt lamp, 7 watt amplifier, magnetic sound. Has still picture device.

HONEYWELL, INC.

Elmo ST8M is a magnetic sound projector with 150 watt lamp, 800 ft. reel. Elmo ST8MO has optical/magnetic sound.

MPO VIDEOTRONIC PROJECTOR CORP.

MPO Videotronic Super 8 is a cartridge-load 15-minute capacity, magnetic sound projector with built-in screen, 150 watt lamp, 5 watt sound. Attache-style case.

PAILLARD, INC.

Bolex SM8 has 100 watt lamp, 800 ft. reel, automatic threading.

RHEEM MANUFACTURING CO.

Model 4600 is a hand-held magnetic sound projector taking a 5-minute cartridge.

TECHNICOLOR INC.

Model 1000 is an optical sound, cartridge load, 30 minute capacity, front screen projector. Model 1300 is a portable rear-screen optical sound projector in attache style case.

PULSED SUPER 8MM FILMSTRIP/MOTION PICTURE PROJECTORS

DE JUR AMSCO CORP.

Pulsar is a tape-controlled motion picture projector, reel to reel, separate cassette sound. Single frame up to full motion with synchronized sound. Availability: late 1971.

NORTH AMERICAN PHILIPS CORP.

Norelco PIP system projector uses Super 8 film and audio tape in separate cassettes synchronized by pulse on tape. Film is advanced at any speed up to 24 fps. thus operating as a film

How to project a better sales picture in 1971.

Let your salesmen carry the Bohn Benton Institor; an elegant, rear screen, Super 8, sound and motion picture projector.

It's light, only 17 pounds.

It's simple to operate. In less than 30 seconds, you can have it set up and running in broad daylight.

It's cartridge loaded. There's no film threading.

It's an attache case. Easy to carry. Just 4-inches wide.

And it's sensibly priced. \$300 for single units. Or as low as \$240 in quantities.

The Bohn Benton Institor. You'll be sold on the way it sells.

Bohn Benton Inc.
110 Roosevelt Avenue
Mineola, N.Y. 11501

Bohn Benton Institor

strip or motion picture projector
Built-in rear screen or front projection.

RETENTION COMMUNICATION SYSTEMS, INC.

RCS-MS-1 projector uses Super 8 film and audio tape packed into single endless loop cartridge. Film is advanced at speeds up to 7 frames per second, permitting single frame or rapid advance animation without blackout. RCS-MS-2 is similar to RCS-MS-1 but with variable speed motion capability up to 24 fps. Available late 1971.

SOUND FILMSTRIP PROJECTORS

AUDISCAN, INC.

Four models—all automatic, with continuous loop 16mm filmstrip and audio tape in sealed cartridge. Built-in screen.

CHARLES BESELER COMPANY

Model 505 has film and sound in magazine cartridges, automatic operation, built-in screen, 35mm, packs in attache case.

DU KANE CORP.

Several models available. Cassette Super-Micromatic is automatic, 500 watt, 35mm. Super Micromatic is automatic or pushbutton, uses discs instead of cassette. 35mm. A-V Matic has built-in screen, sound on disc. Console style, 35mm. Automatic Flip-Top comes

in folding case, sound on disc. 35mm. Mite-E-Lite is manual, sound on disc. Budget price. 35mm.

GRAFLEX DIV.—SINGER CO.

Auto-Vance Study Mate is a 35mm single frame projector with built-in screen. Sound is synchronized by audio cassette. Small size. Low price.

LA BELLE INDUSTRIES, INC.

La Belle sound filmstrip projector come in three basic designs: Courier which is a portable, continuous, battery-operated projector with built-in 5 by 8" screen. Sentinel, which is large and designed for point-of-purchase display, has an 8 3/4" by 12" screen. Tutor is a front-projection model. Courier Sentinel and Tutor come in single-frame 35mm and 16mm versions. The latter uses La Belle's Commpak 16mm sight and sound cartridge.

MC CLURE PROJECTORS, INC.

Several models available using 35mm single frame filmstrip, disc and cassette sound, automatic and manual advance.

OPTISONICS CORP.

Mastermatic II is a 35mm single frame filmstrip projector with a built-in screen utilizing a Unipak endless loop film and tape sealed and synchronized cartridge. An optional responder unit is available. Both front and rear projection is possible.

STANDARD PROJECTOR & EQUIPMENT CO.

Several models available using 35mm single frame filmstrip, disc and cassette sound. Manual and automatic operation.

TEACHING DYNAMICS

Synchronous sound, slide end filmstrip projectors. Automatic operation. 1 watt sound.

TM VISUAL INDUSTRIES

Showoff/Soundoff 865 is a package unit containing 35mm filmstrip projector, cassette player and self-contained screen. Manual operation. Also projects slides. AV-2200 Synchronomatic is filmstrip projector with cassette syn sound in attache case.

VIEWLEX, INC.

Several models provide manual or automatic advance, disc and cassette sound, single and double frame filmstrip. Models for large and small audiences. V135 is sight and sound "super viewer" in plastic case with 5" x 7" screen. V136 is automatic.

SOUND/SLIDE EQUIPMENT

AUDIO VISUAL SYSTEMS

AVS-500 combines Norelco tape player and Ektagraphic projector with solid state programmer.

what's easy to mount and comes in a roll

carousel.

ROGRAMO INC.
Sync sound unit incorporates Carousel
projector.

now there's a choice choice.

The Royal 16mm Manual
Models from \$650.00

The Royal 16mm Self Threader

Unique features on both projectors:

HIGH POWER LAMP

TWICE AS BRIGHT

Newly designed General Electric or Sylvania
EJL200 W, 24 V Halogen lamps produce
double the screen brightness of 1000 W
Tungsten lamp. Won't blacken during entire
25-hour rated life, yet generates less heat
than standard lamps.

MAINTENANCE

TWICE AS EASY

Fewer moving parts. All major parts (ampli-
fier, film pull-down mechanism, and motor)
are modular units which can be quickly re-
placed with simple tools. Full year warranty
on parts and labor. Royal projectors cost
much less than competitive equipment when
true Total Life Cost (purchase price plus
5-year maintenance) is figured.

CONVERTIBLE

TWICE AS USEFUL

Standard Royal projectors convert to spe-
cial power source and Marc 300/16 lamp
or Colorarc 300/16 in minutes. The class-
room projector can produce auditorium
brightness for special shows, then go back
to work in the classroom with the standard
Halogen lamp. Conversion kit can be pur-
chased with the projector, or added any
time in the future.

PANASONIC VTR/CCTV
Color and mono VTR. TV cameras.

Listen to our competitors for a change.

A careful study of the claims and counter-claims they make for their 16mm sound projectors will lead you to the purchase of our 16mm sound projectors.

Two of our competitors have complex auto-threaders which are always in the film path. So there are adjustment, jam-up, and film access problems. Another competitor found an ingenious way to solve all this. He built a brand new machine *without* automatic threading. You may have trouble defining all of this as "progress".

On the other hand, you can define as progress our new Super 1600. It has an uncomplicated, one-piece Automatic Safe Threader that never needs adjustment and works every time. It can't cause problems because it's moved out of the film path after it threads the leader . . . *so it never even touches the film!*

Safe automatic threading. Tungsten-halogen lamp. The brightest, sharpest, most color-true picture ever. Room-filling instant-on sound. Stop-on-frame. And, of course, traditional Viewlex reliability.

The Viewlex Super 1600 is the one you'll choose. Take our competitors' words for it. Or take our word for it. Write for a free brochure to Viewlex, Inc., Holbrook, N.Y. 11741. Dept. 5

Where everything in AV happens.

Fresh start

for your old film

Whatever the condition of your film, Rapid can repair, restore and rejuvenate it.

No matter how scratched, brittle, oil-stained or dirty it is. No matter how badly spliced, Rapid can give it new life.

That goes for color as well as black and white; 8, 16, and 35mm.

What's more, after we've revitalized the film we give it a special protective coating that resists future damages.

So why spend a fortune on new prints? Come to Rapid Film Technique and renew your old ones.

Use handy coupon below to send for your FREE Trial Certificate and see for yourself what dramatic effect rejuvenation can have . . . on your films and on your budget.

AUDIO/VISUAL EQUIPMENT

... the right answer
to your problem

In communications, audio/visual is the
current magic word ... be it a sales
story, assembly instruction, employee
indoctrination, employee training, worker
guidance, public information, or the
new dimension in education.

Just having pictures and sound is not
enough ... there must be a dramatic,
convincing presentation ... and that
presentation needs proper "audience-
rated" dependable equipment.

LaBelle offers a reputable line of reliable
audio/visual equipment. Descriptive
literature is free. Contact V. M. Ivie,
Manager, Audio/Visual Sales,

the new generation in cassettes is now.

the PolyGlide Cassette

There's a world of difference in cassettes — and the new POLYGLIDE system proves it. New POLYGLIDE features a unique, patented platform that provides the smoothest running, most trouble free cassette ever made. Hearing is believing, so call or write for a free sample and further information. Write Mr. H. Henry. Polymer Processing Inc. Lenoir, North Carolina 28645 or call (704) 758-5171.

PROCESSING INC.**

Lenoir, North Carolina 28645
A division of Broyhill Industries

Our plastic reels, cans and cases all landed major Hollywood roles.

(And our brother-in-law isn't even a producer.)

A number of major Hollywood studios are using Plio-Magic plastic reels, cans and cases. Almost exclusively.

Why? Because our Plio-Magic plastic protects better than metal. Highly resilient, it can withstand impact that metal can't. There's no bending. No denting. No damaged film.

Hollywood liked that.

They also liked our four positive locks. To keep the cases securely closed. And our foam packing. To keep the reels from rattling.

Hollywood, you might say, has gone plastic. Can the rest of the country be far behind?

We make a complete line of quality accessories for film handling. Write us for our catalog.

REVIEWS AND PREVIEWS OF NEW VISUALS

North Carolina Lures Visitors With Theatrical Film

The State of North Carolina, which calls itself *The Goodliest Land*, has sponsored a film of the same name to show the rest of the country what's talking about.

The ten-minute short opened in lay at 18 United Artists Showcase

men at recent premiere in New York: Carl Lenz, president, and Si Perry, Theatrical Distribution Manager, Modern Talking Picture Service, with Robert organ, Attorney General, State of North Carolina.

Theatres in New York. Production was by Tom Hilderbrand in association with Grady Jeffreys Associates. Distribution of the theatrical film, as well as a longer 28-minute version, is by Modern Talking Picture Service.

The phrase *The Goodliest Land* is borrowed from a booklet published in England in 1584. Describing what is now the eastern region of North Carolina, authors Phillip Amadas and Arthur Barlow called it "the goodliest land under the cope of heaven."

North Carolina's Travel and Promotion Division hopes the film will lure a goodly passel of Yankees down to visit the Old North State, for, as one of its officials jocularly remarked at a New York premiere, "One Yankee visitor is equal to a whole bale of cotton, and is twice as easy to pick."

Kohler and House Beautiful Join Forces to Plug Baths

Kohler Co., the plumbing manufacturer, and House Beautiful Magazine, have teamed up to produce a 17-minute bathroom modernizing movie called *The Bold Look in Baths*.

The film features "sensibly beautiful" baths that combine Kohler's new colors, new fixtures and new fittings with an imaginative array of decorating ideas.

Seton Lindsay, House Beautiful's Bath and Beauty editor, and Patricia Guinan, Assistant to the Publisher, narrate the movie and provide "womanly insight into decorating magic."

Alderman Studios at High Point, North Carolina, handled the production. The film is available to group audiences on free loan from J. L. Bordeaux, Kohler Co., Kohler, Wis. 53044

New Short Subject Reel for Theatres

The fifth issue of *Theater Cavalcade*, a short subject series produced by Association-Sterling Films, is now playing in theatres across the country. The 12-minute film uses a newsreel format in presenting six sponsored informational segments on ecology, sports, education, safety, tourism and science.

The Linguist.

Crashing through language barriers is a snap for the handsome, new Mastermatic® II 35mm filmstrip projector.

Ever try to make a sales point to a roomful of brokers with a filmstrip that talks Distributorian? Forget it! They talk languages as different as Latin is from Swahili. Or Elementary from High School Level English.

Imagine how great you'd feel walking in to give a presentation confident that the voice track on your filmstrip will talk in the idiom of that particular audience.

That confidence is what Mastermatic II is all about.

And Unipak™ is the heart of it. Unipak is the nifty little snap-in cartridge that holds the 35mm filmstrip (a continuous look of up to 200 frames), the audio track subcartridge (with a continuous loop of up to 30 minutes), and the prism mirror. And that's the whole

ball of facts!

Nice thing is that the audio track snaps right out so you can snap in the track that talks in whatever language or level your audience understands best.

And look, no hands! You never touch the film or the audio tape so both of them last as long as you have audiences to show them to.

More?

Mastermatic II has all solid state, plug-in circuits so you can flip it on and go. Now.

No warm up.

And IC's for reliability.

And a big, bright 500 watt

lamp so both front and rear projection is clear and sharp from any angle in the room.

And a frame lock to hold the picture where it belongs.

And separate advance and

hold frequencies for response and restart so you can program pauses to suit your presentation to your audience.

And a more efficient cooling system.

And a jack for optional remote control.

And, just for show, a really great looking slimline case that says a lot about your presentation before you even start.

And you thought our Mastermatic I had everything a 35mm filmstrip sound projector needed.

Write now for Mastermatic II specs. They'll prove our point. In your language. Optisonics Corporation, Montgomeryville, Pa. 18936

THE MASTERMATIC® II Projector is covered by issued and pending U.S. and foreign patents

The new series, which is made available to theatres without charge, tells about Avery Island, a wildlife preserve; the first women's golf classic; the building of a schoolhouse in Indonesia; the 40th anniversary of the Empire State Building; a spectacular achievement in railroad construction; and a dramatic auto safety demonstration.

"Circuits, independents and booking services have praised *Theater Cavalcade*, because of its entertainment and informational content," Robert Finehout, Association-Sterling Vice President, said. "We intend to produce several a year to help fill the short subject gap that theatres are faced with. We expect to have a sixth issue by July 1 and other issues in release in the fall and winter."

Harlem Prep Documentary Acts As Fund Raiser

Step by Step, a documentary film based on the innovative Harlem Preparatory School, is now being shown to group audiences and on television under a grant from Standard Oil Company (New Jersey).

The half-hour motion picture was shot on location in various classes in

progress in the school, at Vassar College in Poughkeepsie, New York, where one Harlem Prep graduate is studying, and in homes and streets of Harlem. Included in the footage are scenes from the 1970 commencement exercises, which were held in the street at the busy corner of Seventh Avenue and 125th Street, in Harlem.

Harlem Prep students pictured in new film.

The title of the film, which is also the title of the school song, refers to the steps the students—almost all of them former public school dropouts—must make to fulfill the collective aspirations of ghetto youths who have found new goals at Harlem Prep. The first step, of course, is to decide to

try once again. The next step is to excel in a course of study which may require going all the way back to obtain basic skills.

The film was produced by Zeb Associates, a New York advertising agency. It is expected to become an important part of the fund raising activities, in addition to serving as a vehicle to spur the development of similar schools in other areas. Distribution is being handled by Model Talking Picture Service.

Peace Corps in Colombia

Challenge in Colombia is an honest film about Peace Corps work that is intended to communicate to a young questioning audience of college students, particularly in agricultural schools.

It shows volunteers working in crop and cattle development programs sponsored by the Colombia government. Most of the commentary is from the volunteers, themselves, who express personal feelings, both positive and negative, about their work.

Scope Productions, Tampa, Florida, made the 28-minute color film for the Peace Corps. It was produced, directed and photographed by Scope's talented partners, Jack Cosgrove and Joe Keyerleber.

EXPERTISE

... in craftsmanship, service and quality factory parts. Century is America's oldest and most reliable zoom lens repair specialist. For over twenty years, our high inspection standards and quality testing have satisfied leading professionals in the industry, such as Columbia Studios, MGM, 20th Century-Fox, Universal Studios, The National Geographic Society and U.S. government.

Century's huge 2500mm optical collimator, the largest in the industry, and three separate resolution tests on every lens will work for you, by providing ultra-sharp images. Our efficiency allows minimum time loss with repairs accomplished in as little as eight hours in our plant. Our technicians are fully experienced with Angenieux, Rank-Taylor Hobson, Berthiot and all other motion picture and TV lenses. We guarantee to equal or exceed factory specifications.

Send your equipment now or phone for further information.

Century Precision Cine/Optics

10661 Burbank Blvd., North Hollywood, California 91601 / (213) 766 3715

Highways to "Nourish the Spirit and Refresh the Senses"

Washington-based highway lobby has sponsored a new film, *The Other Face of Freedom*, extolling the highways as "outlets for man's individualism by permitting the return to nature, to nourish and spirit and to refresh the senses."

Various sequences show highways as providing "the ability to move freely . . . to exchange ideas, to travel across these United States wherever and whenever we want . . . the other face of freedom."

Sponsor of the film is The Road Information Program, Inc. (TRIP), which strives for a wider appreciation of highways on the American scene. It was produced by Vision Associates, New York, and is being distributed by Association-Sterling Films, Inc.

Volvo: Scandinavia's Largest Industrial Complex

The Volvo people, who make those Swedish automobiles, have sat for their motion picture portrait. The 12-minute color documentary, called *This Volvo*, is available on free loan to group audiences through Modern Talking Picture Service.

It will be news to many Americans at A. B. Volvo makes more than cars—a lot more. It is Scandinavia's largest industrial complex, manufacturing trucks, buses, industrial machinery, farm and forestry equipment, track vehicles, marine engines and out-drive units, and jet aircraft engines.

The emphasis in the film is on craftsmanship and the optimum working conditions of Volvo's 34,000 employees. "Volvos are driven by people," says the corporate philosophy, "so they must be built by people."

Southwestern Bell Features Comic in Long Distance Short

What's Rich . . . And a Little About Long Distance stars TV entertainer Rich Little is a series of impersonations demonstrating how new telephone equipment enables customers to dial all types of long distance calls. Little, the one-man cast, makes and receives calls in guise of Jack Benny, Bing Crosby, Ed Sullivan and others.

Bill Stokes Associates, Dallas, produced the 28-minute color film for Southwestern Bell Telephone Co.

FEATURING NEW EQUIPMENT AND SERVICES

35mm Camera

ARRIFLEX CORP. has a new Silent, hand-held 35mm motion picture camera, the 35BL, which will be ready for delivery probably early in 1972. Of revolutionary design, the new 211b camera is not only self-blimped but has built-in motor and is crystal-controlled for cordless

sync. Motor will also run synchronously on 60 cycle AC line frequency. Registration is said to match that of any studio camera. Accepts all standard Arri lenses. 25-20 Brooklyn-Queens Expressway West, Woodside, N.Y. 11377.

16mm Camera

CINEMA BEAULIEU has introduced a new version of the Beaulieu R16B 16mm camera with built-in power zoom coupled to the standard Angenieux 12-120mm lens. Zoom speed is infinitely variable from 3 to 15 seconds. Also new is a pre-focus control button which opens the lens and zooms to telephoto automatically, allowing ultra-critical focussing. Interestingly enough, both these features originated on the Beaulieu Super 8 4008ZM camera. 14225 Ventura Blvd., Sherman Oaks, Ca. 91403.

8mm Camera

CINEMA BEAULIEU has also added a sync sound model to its line of Super 8

cameras. The 4008ZM2 hitches up to several double system recorders, including Nagra, Stellavox and Uher. Price is \$895. 14225 Ventura Blvd., Sherman Oaks, Ca. 91403.

Lecterns

ORAVISUAL has a new line of lectern with automatic height adjustment. built-in sound system is said to produce 20% to 50% more usable power than conventional. P.O. Box 11150, St. Petersburg, Fla. 33733.

Box 157, Butler, N.J.

Slide Synchronizers

MONTAGE PRODUCTIONS now has the Montage/Narrator 1000, with cassette sound programming synchronizing with Carousel or Ektagraphic slide projectors built in. Among its features are two inputs for mixing music or sound effects and speech. It is compatible with all dissolve systems without modification, and

easily accommodates continuous loop cassettes for repeating unsupervised sound/slide presentations. Price is \$349.95. Montage also has a cassette sound sync system without built-in projector, the Audio/Mate, which works with any automatic slide or filmstrip projector. Price is \$189.95, 49 W. 27th St., New York, N.Y. 10001.

CREATRON, INC. is now demonstrating the Cinemasound #1050, a cassette recorder with built-in synch pulse generator for synchronizing with almost any type of automatic slide projector. 32 Cherry Lane, Floral Park, N.Y. 11001.

SETCO AUDIO VISUAL has announced the Synchronmedia I, which combines the Norelco Synchroplayer cassette player and synchronizer with an EK 760 Carousel or Ektagraphic B slide projector into a heavy-duty plastic carrying case with a built-in screen. 440 St. Vincent Ave., St. Louis, Mo. 63119.

16mm Projectors

ALLIED IMPEX has two new Bauer P6 16mm models: the Studio, which offers double band interlock projection; and the Synchron, which has a synchronous motor and manual threading for quick access needed in production and lab work. The P6 Studio has facilities for recording, for transfer of optical to magnetic, or magnetic to magnetic. Price is \$3575. The P6 Synchron is similar to the Studio but without the double band. Price is \$1495. 168 Glen Cove Road, Carle Place, N.Y. 11514.

EASTMAN KODAK'S new model AV-12M6 Pageant 16mm sound projector offers magnetic and optical playback as well as magnetic recording. Features are low and high level inputs independently controlled for mixing, VU meter, special solar cell for noiseless sound pickup, 6-8 and 200 ohm outputs for speaker or headphone monitoring, as well as other characteristics common to previous Pageants. Price is \$1250. 343 State St., Rochester, N.Y. 14650.

Random Access

MAST DEVELOPMENT has announced a new compact control which will operate both Kodak and Mast random access projectors. Called a "Slim Face", the new control can be used in confined areas. It offers instant access to any of the projector's 81 slides. 2212 E. 12th St., Davenport, Ia. 52803.

Screens

EASTMAN KODAK is making its well-known Ektalite screen stronger and more portable. Providing images said to be six times brighter than other screens, the Ektalite 40" by 40" screen has been difficult to move or to ship without fear of

damage to its fragile surface. The improvement has screen, frame and back support in one lightweight, integral mold. 343 State St., Rochester, N.Y. 14650.

Programmers

SPINDLER & SAUPPE has a new low-cost, four channel programmer, the Quadra Que, which works with any reel-to-reel stereo tape recorder. It is designed particularly to automate 3-screen slide shows with integrated motion pictures on the center screen, and to control automatically a five-function dynamic dissolve presentation. Price is \$465. 1329 Grand Central Ave., Glendale, Calif. 91201.

PHOTOSOUND SYSTEMS has announced a new time-division multiplex encoder/decoder programmer, Model ES 1856, available as a 4-screen/8 function unit for \$1800, or as an 8-screen/16 function system for \$2495. 4444 W. 76th St., Minneapolis, Minn. 55435.

Lab Equipment

CARTER EQUIPMENT has announced a new sound track applicator available in all film formats as a single or as a combination 16/35 or 16/32 unit. The applicator is used as part of an Eastman type 7389 development system. Prices range from \$955 to \$1295. 242 So. Glasgow Ave., Inglewood, Calif. 90301.

Camera Accessories

VICTOR DUNCAN, Inc., has updated its well-known handgrip for Felair NPR to accommodate any of the motors now used with the camera. 11403 Gratiot Ave., Detroit, Mich. 48213.

Videotape Equipment

3M COMPANY has introduced a new generation of "High Energy" videotapes compatible with present and future equipment. The new cobalt-modified ferric oxide coating is said to provide increased performance in signal to noise ratio and in color purity. It promises to be important in such considerations as high-speed video cassette duplication. Helical versions of the new tape are designated 461 or 462, and will sell at a 15% premium. 3M also says its new "High Energy" tapes will bring reel-to-reel sound quality to audio cassettes. St. Paul, Minn. 55101.

SONY CORP. has announced the EV-320F, a new one-inch video recorder with capstan-servo electronic editing which permits sequences to be inserted onto a pre-

recorded tape from several sources—tape, off-air, live or film, with exact sync and without splicing. Price is \$5500. 47-47 Van Dam St., Long Island City, N.Y. 11101.

H. WILSON CORP. has a new VTR Center which houses VTR recording equipment into a mobile cart providing convenient storage and operating facilities. 555 West Taft Dr., South Holland, Ill. 60473.

AKAI AMERICA has announced the VT-100, a new lightweight, battery-operated portable videotape recorder using 1/4-inch tape. Recording speed is 1 1/4 ips, providing 20 minutes of time (b/w) on a five-inch reel. Tape cost is said to be 1/3 that of other VTR systems. The VT-100 includes camera, recorder-player, battery charging adaptor and built-in monitor. Price is \$1295. 2139 East Del Amo Blvd., Compton, Calif. 90220.

Slide Projector

CHARLES BESELER CO. has announced the Slide King II, a more powerful 1000 watt auditorium slide projector than previous models. It accommodates all sizes from 2" by 2" up to 3 1/4" by 4". 219 S. 18th St. E. Orange, N.J. 07018.

Storage

ADVANCE PRODUCTS has a new storage cabinet for tape cassettes. 320 cassettes can be stored, and the cabinet lock-stacks to Advance's Pixmobile equipment. Price is \$85. P.O. Box 2178, Wichita, Kan. 67201.

Now... Capital Film offers two Full Service Laboratories...

- in Washington, D.C.
- in Miami, Florida

In May of this year, Capital Film completed expansion of its Miami lab into a full service facility with editorial, sound and processing capabilities.

Also, because of a growing demand from regional customers, the Miami facility has created a special slide film and film strip department.

Here's what a Capital Film customer NOW receives...besides the recognized quality and renowned customer service.

FROM MIAMI:

1. Full 35 and 16mm color positive printing and processing services as well as black and white.
2. Full 16mm color reversal printing and processing services including 7389 sound track prints.
3. Slide film and film strip department.
4. Optical printing department for blowup or reduction with new wet-gate.
5. Complete editorial and sound transfer facilities under one roof.
5. Color control with new Eastman Color Analyzer.

FROM WASHINGTON:

1. Full 35 and 16mm color positive printing and processing services as well as black and white.
2. Full 16mm color reversal printing and processing services including 7389 sound track prints.
3. Full Super 8mm color printing and processing services.
4. Super 8mm cartridge and cassette loading and repair.
5. Complete editorial and sound dubbing, re-recording, and transfer services—RCA WESTREX.
6. Optical printing department with wet-gate.
7. Color control with Hazeltine color analyzer.

It's a CAPITAL IDEA to give you full service...night or day.

SALESMANSHIP IS KEY TO SURVIVAL FOR IN-PLANT PHOTO DEPARTMENTS

BY

DON ADAMS

*Motion Picture & Education
Markets Division
Eastman Kodak Company*

(The author has been an audiovisual specialist with Eastman Kodak's Motion Picture & Education Markets Division since 1968. He has worked primarily in the Southern California area where many electronics and aerospace firms with in-plant film departments are headquartered. Before joining Kodak, he was a supervisor, audiovisual promotions, for the Douglas Aircraft Company, now McDonnell-Douglas, in Santa Monica, California.)

For many in-plant photo departments, particularly those of defense and aerospace companies, the past two years have been a drought in what had been a fruitful and creative oasis of opportunity.

As contracts have dried up, there has been a tendency for some companies to cut back on all activities and personnel. As a result, many teams of audiovisual communicators, who have made important contributions to their companies and industries, are being disbanded at a time when their unique talents are most needed.

When, if not now, has there been a greater need for better communications? Was there ever a more crucial time for a company to be able to make effective presentations to develop new markets and compete for those that exist?

Isn't efficient training more important now than ever?

Shouldn't management be looking to its audiovisual communicators to help still rumors and allay employees' fears about the future?

Yet, in this environment of opportunity, while some inplant groups prosper, others dwindle and are dismantled. What is there that you can do—other than wait for the day when the pink slip shows up in your pay envelope?

Actually, it's the oldest story in the world. It's always the shoemaker's children who go barefoot. Basically, you are all communicators. But how well have you communicated with the decision-makers of your company?

Does your management know about all of the new things that have been happening in audiovisual technology? Do your managers know that multi-screens and mixed media have come of age? Do they realize that your department has the capability to produce such programs

at reasonable costs?

Have they seen the Kodak Ektalite screen that opens new presentation opportunities because it can be used in lighted surroundings? Are they aware of the inherent advantages of single-concept super 8 film, and the Kodak Ektagraphic 120 movie projector as unique training tools?

And how about new "customers" within your company? Are there departments you have not worked for? What do they know about your group? The chances are good that there is someone with a problem you can help solve—right in your own company.

In a word, the technique that almost every in-plant photo department needs today is salesmanship. Some of the most successful departments I know have stayed that way because they have assigned sales responsibilities to appropriate personnel.

It is easier if your department is headed by, or reports to, someone in top management who is willing to go to bat for you. However, if you are determined, you can get your message across, no matter what your organizational structure. Today, almost everyone—all responsible managers, certainly—is interested in learning how to improve his company's sales and other operations. It is important to expose the appropriate persons in your company to the real opportunities of audiovisual communications. The realities might be very different than their stereotyped images.

Kodak has produced a number of films and multimedia presentations designed to help you sell your services. One of best is a 26-minute color film, "Movies Move People." This production is actually a series of 10 films within a film. Each mini-story documents how a

company used audiovisual techniques to solve problems ranging from sales, to training and motivation.

The overall message of the film—convincing one—is that in today's visual oriented society, films are a result-producing medium.

We can lend you this film, or Kodak audiovisual specialist will help you present it when you arrange a seminar for the decision-makers at your company. The film showing should be followed by demonstrations of the kind of work that your department can do. This can be further supplemented by showing newer equipment. It's difficult for a sales manager, for example, to be sold on the idea of making roomlight presentations, until he sees an Ektalite screen in use.

Depending on the size of your company, such seminars can be set up for department heads or their representatives or you can approach one or several departments at a time. Once you start, a certain amount of word-of-mouth selling is bound to result. In one case, we helped a photo department make a presentation for its company's sales management. The manager was so impressed by the possibilities that they reported to the corporate president, who requested a similar meeting.

Of course, you are not going to achieve all of your goals at one meeting. You can follow up by printing a price list and distributing it to all department heads, giving them a firm fix on the cost of the services you have shown them.

Then, you have to knock on department doors—going to the people in sales, public relations and advertising, personnel, training and safety, and so on. Offer to brainstorm audiovisual solutions to their problems.

'CINDY' FILM COMPETITION DATE EXTENDED

For the twelfth consecutive year, one of the nation's original non-theatrical film competitions, the "Cindy" Awards of the Information Film Producers of America, are again calling for member and non-member entries. The "Cindy" statuette is among the most sought-after and respected symbols of professional achievement among filmmakers, communicators and information specialists. Last year, the categories were expanded and divided into groups so that entrants would be competing with others on the same organizational level.

Recognizing the tremendous advances that electronics have made in the industry, the category "Videotape for Information" is being repeated. Arrangements have been made to accept all sizes of

Don Adams...

continued

The in-plant department at my former employer, McDonnell Douglas, has successfully carried the concept of salesmanship a step further. They are producing films for many of the firm's airline customers. In addition, they realized that many of the films they were making, most specifically travelogues, foreign language productions, and technical presentations, had educational value. So they prepared a catalog describing the films and offering them for sale to educators.

One man was assigned to research the market and how to sell it. An early lesson he learned was that there is an emerging demand for small-format films for education. As a result, even though most of the films in the Douglas library were produced in 16mm format, the catalog offers a choice of 16mm or Super 8 release prints.

It also became obvious to the Douglas in-plant department that many of its prospective customers didn't own appropriate equipment to show films. As a result, the department became a Kodak dealer, which entitles it to sell our audiovisual equipment for a profit. Thus, the catalog offers media packages that include 16mm films and a Kodak Pagant sound projector, or a number of Super 8 presentations with a Kodak Inamatic M100A sound projector.

Because of such salesmanship, the Douglas film department, which started with two employees 20 years ago, today has 30 full-time staffers. Not only does this give the company a broad communications capability, but it also is a profit-making enterprise.

The lesson is simple: Today, no in-plant photographic department should settle for complacency. While yours basically may be a service organization, it is also up to you to sell what you can do best for your company.

tape, black and white, or color, for judging. All subjects are acceptable if they pertain to the communication, sales and/or information fields.

In order to give more time for late entries, the "Cindy" competition chairman, Hal Reavely, has set a new closing date. The competition is now open and in no case will entries be accepted later than August 15, 1971. First and second place winners will be presented with their gold or silver "Cindy" at the IFPA National Conference and AVCOM Trade Show, October 14-17, 1971, at the Town and Country Convention Center, San Diego, Calif.

Rules and regulations and official entry forms may be obtained by writing to IFPA National Office, P.O. Box 1470, Hollywood, Calif. 90028.

CHUCK MAC CRONE

IFPA Editorial V.P.

ITEM: Because of its humble beginnings many years ago as Industry Film Producers Association, IFPA still has a large contingent of its membership involved with in-plant film units. As if you didn't already know it the United States Government recently made it official... "the U.S. experienced a recession in 1970—but a mild one..." Others like to call it a slowing down of the economy. What ever it is called it means hard times for some.

The result has been that many film makers are looking for work, and IFPA'ers are among them. It is only right that everything be done that can be to help locate jobs for these people—our people. This column is available for that use. Unfortunately space can't be opened up to everyone, else the IFPA Journal would be the size of Business Screen itself. So IFPA members only—including our new members, if you are looking for a job, please send me a short (50 words or less) resume. Include with it your name, address, phone number and if you will relocate. Your resume will be printed only once unless you re-submit it each month. The material should reach me no later than the 23rd of the month. IT'S YOUR MOVE.

ITEM: Ray Engel, former L.A. Chapter treasurer, has formed "PRODUCTION ASSISTANCE". Engel and his associates offer 16mm cinematography and editing, still photography and custom photo finishing. Location is 11627 Oxnard, North Hollywood, Ca. 213-769-2200.

ITEM: Computer Image Corporation, an IFPA sustainer, has filed a Registration Statement with the Securities and Exchange Commission covering a proposed public offering of 150,000 shares of its common stock. The net proceeds of the offering will be used principally to manufacture a computer animation device now in prototype stage of development.

National Scene

BY

BOB MONTAGUE

IFPA National President

Today, challenge to the professional society is its ability to respond to the needs of its membership. The responsibilities are many. What are these needs and services that can be provided by a vibrant, living, and dynamic organization? A few are—provide a forum for the expression and exchange of ideas of the professional communicator—a focal point and market place for jobs and skills needed, and a dignified professional resource availability pool—a source for solutions of production or application problems—and a champion for recognition, not only from peers and associates, but also from management and the executive body, realization that through communication, savings and efficiency can make the difference between success and failure of projects, and even entire divisions.

When I say communication, I don't refer just to public relations or industrial relations. I mean communicating with production control, material handling, manpower distribution and utilization.

How many filmmakers today can make truly accurate estimates of costs and schedules? Do you know exactly where you are financially and completion-wise at every stage in a production? Can you adjust without loss of quality, or must you always add costs with either time delays, added refinements or unscheduled changes in direction or tack? How efficient are you with your personal time? your production time? your leisure time?

How efficient should a professional volunteer-operated society be? Flying over Missouri, Oklahoma, Texas and New Mexico farmlands, I noted that only 25 percent of the cultivated land areas were green and in production. The balance was either freshly plowed, recently harvested, or lying fallow. Can such a society be any more functional, productive or active at any one time than this great land of ours? It is said that we as individuals use only six to ten percent of our brain power and that we listen to only 25 percent of what is said to us!

IFPA's list of services and activities constantly change and surge, but it needs your help frequently and repeatedly to continue to benefit its members.

I'm writing these thoughts to you from Zion National Park. Surrounded by these magnificent and timeless sentinels one becomes aware of the brief moment in time which we spend our life on this earth, and what a short time we have to make a contribution to our fellow man. We can make a better world with better understanding and more honest films—a challenge well worth accepting.

The 12th Annual Conference of the Information Film Producers of America will be held in San Diego, California: October 13-16, 1971.

66 AWARDS AT U.S. INDUSTRIAL FILM FESTIVAL

Fifty-six "Gold Camera Awards" were presented to winning films in as many categories at the U. S. Industrial Film Festival, April 29, at the Palmer House in Chicago.

Hundreds of industry representatives gathered for the event heard Jamison Handy, generally recognized as the founder of the industrial film industry, proclaim that "Audio-visuals are yet on the threshold of their exciting and dynamic potential. The future will see this industry become involved in the betterment of our every daily activity."

Jamison Handy, key speaker at U.S. Industrial Film Festival.

Three special awards were made in addition to the category winners. The chairman's special award was presented to *Is It Always Right to Be Right?* produced by Stephen Bosustov for Ohio Bell Telephone Company. The provocative film, narrated by Orson Welles, was also an "Oscar" winner at the recent Hollywood Academy Awards. A special award from the publication *Backstage* for the best public relations film went to *Network* produced by Owen Murphy Productions, New York, for American Telephone & Telegraph Company. A BUSINESS SCREEN award to the best advertising and public relations film went to *Only Fieldcrest Does It Like This* produced by Mort Kasma Productions, New York, for Fieldcrest.

In addition to 56 category awards to this year's films, ten "Golden Decade Awards" were made to outstanding award-winners of past years.

A FilmFest Seminar drew overflow crowds at many programs and demonstrations.

The Festival and Seminar will be expanded to a two-day event in 1972. March 1st is the deadline, and Chicago will again be the location.

BELL SYSTEM FILMS APPEAL TO YOUTH AUDIENCES

FILMING IN AFRICA

CLEVELAND PUBLIC LIBRARY
BUSINESS INFORMATION DIVISION

SEP 17 1971

A HARDCOURT BRACE JOVANOVIICH PUBLICATION

Here's your chance to team up with a beautiful movie star.

When a movie goes on the road these days, it rarely travels alone. Very often, it takes along an interesting sponsored film. And it works out beautifully for both of them.

You see, the major feature film producers aren't turning out Selected Short Subjects like they used to. Which means the chance to have your company film shown as an Extra Added Attraction is greater than ever before.

Your film can be right up there on the same screen with the big ones. It could play over 3000 theatres a year. And reach some 6 million urban moviegoers.

All it takes is a call to Modern. We'll tell you how easy and inexpensive it is to book your film into theatres all over the country. (We've been doing it for years.)

Better still, ask AT&T, Humble Oil, Equitable Life, Anheuser-Busch, or The New York Stock Exchange. They're just a few of the companies that are now playing with the biggest stars in town.

Modern Talking Picture Service, Inc.

Byron Announces Expansion in TV Facilities

Byron Motion Pictures is spending \$5 million to expand further into the television field, it was announced last month.

The company will soon begin construction of new production studios on property adjacent to the Byron lab in Washington. Along with new stages to be available for producers, new Ampex recording and duplicating equipment will permit five copies of one-hour taped shows to be duped in six minutes.

New video switchers with all possible combinations of special effects have already joined complex film chains installed during the past year, and two new PC-100 Norelco color cameras will be in operation by late summer.

Byron Roudabush, president, emphasized that Byron's expansion into the television field implies no belief that TV is more important than motion pictures. However, he sees the two fields becoming more and more inter-related.

Newsfilm Lab Expands in Hollywood

Newsfilm Laboratory, Inc. has expanded its facilities in Hollywood into a new all-in-one climate-controlled laboratory.

Newsfilm Laboratory Ektachrome Processor recently installed by Treise Engineering

The entire first floor is devoted to film processing, with Ektachrome processors, sensitometric color controls and laboratory analytic equipment. Upper floors include in-house and rental facilities for editing, screening, dubbing, mixing, interlock projection, sound transfer, an insert shooting stage and a conference room.

Jam Handy Organization Elects New Director

Miss Loma May has been elected to the Board of Directors of The Jam Handy Organization. She is the first

woman to serve on the Board.

Appointed vice president of training research for the Organization in 1968, Miss May has had more than thirty years experience in the business. She is a specialist in adaptations of professional academic psychology and the application of behavioral concepts to the training, distribution and production-related requirements of today's marketplace.

Miss Loma May, Director and Vice President of The Jam Handy Organization

In a recent Jam Handy "Growth Program of Personal Development," Miss May worked with a carefully selected "faculty" of some thirty nationally-known authorities in the academic, sales and management fields. This is a two-year home study program subscribed to by over 15,000 retail salesmen from coast-to-coast.

Of interest to the business community is the fact that The Jam Handy Organization and its Board is presently re-aligning itself according to the oft-stated Kettering principle for getting the desired results "Make it smaller and make it do more."

The Jam Handy Organization is restructuring its operations in order to concentrate more precisely in those areas of management, training and consultation which require continuous innovation in the design and development of programs for business and industry. The new "compact" format of the Organization is "precision-engineered" to the purpose of today's cost benefit standards of operation.

International Film Festival of New York Entry Extended

The deadline for entries in the 14th International Film and TV Festival of

New York has been extended to October 1. The annual event takes place October 20-22 at the Americana Hotel.

Among the industry's leading personalities who have already agreed to act as judges are Alfred Tennys, VP, J. Walter Thompson Co., Mark Lieberman, VP, The J. B. Williams Co., William J. Diehl, VP, Visual Marketing, Inc., and Arthur R. Ross, VP, Weiss & Geller Inc. The complete list will be released very shortly.

As in previous years, a lecture program, workshop sessions, seminars, as well as continuous screenings of outstanding film and TV productions will be part of the festival.

Hope Reports in New Format

Hope Reports, the market report firm which keeps tabs on AV statistics, will publish three national reports this year. In addition to *AV-USA 1971* which continues the statistical work that Tom Hope has compiled for the past 11 years, the company will also publish *AV in Education 1971*, a detailed report on educational instructional media, and *Motion Pictures and Video Cassettes 1971*, which will be in theatrical and television film and video cassettes.

Hope explained that there be a report with 1970 in the title. The series goes from *AV-USA 1969* to *AV-USA 1971*. The current report covers 18 months—all of 1970 and the first half of 1971, thus giving it more timeliness.

The reports are available singly or as a complete series, in hard or soft cover, or in brief summary form. Inquiries may be addressed to Hope Reports at 58 Carverdale Road, Rockledge, N.Y. 14618.

New Proof Print Process at Consolidated

Consolidated Film Industries received its ninth Academy Award last spring for an innovation called "proof-printing."

Now being offered to production nationwide, the process bridges the gap between the video analyzer and the first print. Producers receive a first trial answer print with each scene completely color corrected.

The new process was originally conceived by CFI Engineer Leonard S. Kolow. Edward H. Reichard, Chief Engineer, directed construction of the Proof-Print machine.

It was a group therapy setting: ten racially mixed individuals together, in a small room, prepared to undergo some of the most intense encounters of their lives. Footage of the session could have immense impact and drama — assuming cinematographer Edmund Bert Gerard could get it all on film.

"I had no idea beforehand where any specific individual would be seated," writes Mr. Gerard, "so it was impossible to set my lights to accommodate the tremendous range in skin colors. I purposely kept one side of the room dark because 'nothing-is-supposed-to-happen-on-this-side' and because I wanted some silhouette effects. But suddenly all hell broke loose, and one of the group members on the dark side of the room broke down...two therapists rushed over to comfort him...and I had to pan, changing exposure as I went."

Normally the scene might have come out correctly on film, if Mr. Gerard was able to estimate his foot candles. But guesswork was unnecessary this time; his 16BL was equipped with 'APEC', the Arri Precision Exposure Control, which reads illumination through the camera's lens. "It immediately registered the change and allowed me to instantly compensate for the lower light level. Exposure was on the nose. As it developed, this scene was the most moving of the entire film."

Mr. Gerard has many favorable comments on 'APEC'. "Naturally the system is not automatic. It simply reads the scene and provides the cameraman with the most accurate reflected light measurement possible, continuously visible in the viewfinder scale; now all relevant picture information is always available to the cameraman's eye. Since 'APEC' I've been able to live dangerously with my lighting, yet the exposures are always in the mid-

dle of the printing scale. And I couldn't calculate how much time I've saved by not having to walk into the set with a handheld meter, to measure all the delicate lighting balances."

Events happen suddenly in documentary shooting, and they change without warning; 'APEC's main purpose is to keep the cinematographer on top of all this, working with a greater accuracy than he's ever known. States Mr. Gerard in conclusion, "after working with it for almost a year, I cannot understand how I was ever able to get along without it." The point is, now nobody has to.

ARRIFLEX COMPANY OF AMERICA

"...and then, where I'd had no idea of what the exposure should be, one of the patients broke down..."

—Edmund Bert Gerard discusses
some of his experiences with the
ARRI PRECISION EXPOSURE CONTROL

Now... Capital Film offers two Full Service Laboratories...

- in Washington, D.C.
- in Miami, Florida

In May of this year, Capital Film completed expansion of its Miami lab into a full service facility with editorial, sound and processing capabilities.

Also, because of a growing demand from regional customers, the Miami facility has created a special slide film and film strip department.

Here's what a Capital Film customer NOW receives...besides the recognized quality and renowned customer service:

FROM MIAMI:

1. Full 35 and 16mm color positive printing and processing services as well as black and white.
2. Full 16mm color reversal printing and processing services including 7389 sound track prints.
3. Slide film and film strip department.
4. Optical printing department for blowup or reduction with new wet-gate.
5. Complete editorial and sound transfer facilities under one roof.
5. Color control with new Eastman Color Analyzer.

FROM WASHINGTON:

1. Full 35 and 16mm color positive printing and processing services as well as black and white.
2. Full 16mm color reversal printing and processing services including 7389 sound track prints.
3. Full Super 8mm color printing and processing services.
4. Super 8mm cartridge and cassette loading and repair.
5. Complete editorial and sound dubbing, re-recording, and transfer services — RCA WESTRIX.
6. Optical printing department with wet-gate.
7. Color control with Hazeltine color analyzer.

It's a CAPITAL IDEA to give you full service...night or day.

For further information, fill in the coupon below for our NEW Corporate Information File, including price lists and reservation for 1972 desk calendar:

MANUFACTURERS OF PROFESSIONAL 16MM CAMERAS SINCE 1931

paradox

BY STANFORD SOBEL

PARADOX: Many people buy films, but very few people sell films

I DON'T KNOW anything tougher to sell than motion pictures . . . after all, what you are selling is your ability to deliver something which cannot really be evaluated until after the money has been spent on it and it's too late to correct your mistakes. I'm convinced that *selling* a motion picture is an act of practical faith . . . and *buying* a motion picture is an act of pure faith.

No two salesmen sell a film in exactly the same way. Although I've observed the procedure hundreds of times, I still don't know what the magic is that makes it work. Movies are a unique commodity, and the men who sell pictures are a separate breed.

Not too surprisingly, there aren't too many successful film salesmen wandering around loose. Most good salesmen today are either producers themselves or else have gravitated into production.

The reason is simple. Today, the clients are themselves very sophisticated about film production, and a fast-talking flim-flam artist doesn't have a chance.

On very rare occasions, a client asks my advice and aid in finding a producer. When this happens a cold chill runs down my spine, because the results of such a request are invariably disastrous for me personally. Let me first explain that I don't write scripts directly for clients. With very rare exceptions, I only accept assignments from producers or agencies.

I have learned that producers like to work with a writer who they can be assured will never pirate an account or curry favor with a client with the hope of eventually diverting him to the writer himself, as a writer-producer. But my reason for not accepting assignments directly from clients is not especially noble or altruistic . . . it's selfish and economically motivated.

Instead of trying to call on all the people who sponsor films, I concentrate on my own job of selling my scriptwriting services to those customers who buy the most scripts . . . the producers.

Nevertheless, every once in a while a client will call me directly and ask me to help him locate a new producer. Usually his reason is legitimate . . . the producer he's used in the past has gone out of business, or the client doesn't like the producer's new partner, or new personnel, or new girlfriend, or his boss has told him they need a fresh and different approach, or the purchasing people have told him to look for new sources, or whatever.

In any case, I am now in deep trouble. Whatever I do, it will be wrong.

At one time in the past, when this kind of problem came up, I would introduce the client to some producer whom I knew and had worked with. This is a very tightly knit industry, and there's a very good information underground, and so invariably, *other* producers with whom I worked, found out about it, and called me up furiously to find out why I had not brought the prospective client in to them instead, especially after they had given me "all those scripts" in the past.

O.K. I figured, instead of recommending an individual producer, I will suggest *several* producers, and let the client make his own choice. Fair enough? *Wrong!* Another horn of another dilemma. Here's how it works: The prospective client comes into town. On a tightly controlled schedule, we visit four producers in a single day. What is the result going to be?

Inevitably, it is in the cards that the prospective client will select one of those four producers, and the other three will be rejected. When that happens, I will have lost three customers.

Well, you might think, but at least you have also made a good friend of that one producer selected by the client. Right? Once again, regrettably, wrong again.

The producer who gets the job feels indebted, he resents the indebtedness, he is fearful of demands I might make upon him in the future, he feels I

have impinged upon his image as master salesman, and finally, he wonders how many *other* prospective clients I have *not* brought to his premises when I could have presumably done so in the past.

All of this sounds weird, irrational and strange, but believe me . . . it is all absolutely true. With one exception, *every producer whom I have helped in this way has stopped assigning scripts to me in the future*, and that includes some producers who had been customers of mine for many years before.

And another thing . . . it doesn't help at all to recommend a producer. I know, but for whom I have not yet written. If I help him get a new client, I will never write for him, nor will I ever get a new assignment from him. His resentment at my assistance is almost as great as that of the producers for whom I already am working.

The producer envisions himself as a Master Salesman. He wants a freelance writer to feel total dependence upon the producer for his career. Any time the writer adopts any other stance, it threatens the producer's image of himself and makes him feel uncomfortable.

All of this is preface to the point of this column . . . salesmanship. On those occasions when I have been involved in the interviewing of producers by prospective clients, it has been an astonishing experience.

The post-mortems of these selling sessions are really fabulous lessons in human nature. To listen to the client's evaluation of the interviews and then to hear the producer's comments, you would never dream they had attended the same session at all. I really think that if I could run a videotape of the client's reactions, every single producer would sell more films. Of course I can't do this in actuality because it's too destructive an exercise. The producer would be crushed, the client would be offended and I'd be out of work forever. But here are some typical examples of producer reaction and client-reaction, all three of them post-mortems of the very same meetings:

continued on page 1.

"Paradox" is a regular column written by Stanford Sobel, a free lance writer well known in the industrial film field. His productions have also been seen on television, and in theatrical release.

What are you waiting for?

If it's your film...
then you haven't heard about
Newsfilm Lab's 168-hour work week!

To: Filmmakers
From: NEWSFILM LABORATORY, INC.

For years, our beat-the-clock scheduling and quality performance have made us Southern California's leading processor of newsfilm. We have direct phone lines to many of our TV accounts. And at one time or another they have all used our Pool Lab Service. At such hot news events like the Manson trial, where one camera is allowed, newsmen can depend on us to deliver prints to the other stations under split-second deadlines.

Our new climate-controlled building has just been completed...total laboratory equipment and rental production facilities all in a compact one-stop location. That makes Newsfilm big enough to have such technological advancements as the latest ektachrome processors and sensitometric equipment to monitor color control...yet small enough so that you'll soon know most of our staff by name.

"Instaservice" - where your reservation and our three processors combine to mean No Waiting. When we say your film is in the dry box and will be ready in five minutes - we mean it. Speed and quality never mean rigidity, however. We're specialists in force processing, low contrast and underdevelopment services.

Write or call for our price list; visit our handsome new facility or let us tell you how your account can be effectively serviced by mail.

NEWSFILM LABORATORY

516 N. Larchmont Blvd. Los Angeles, Calif. 90004

HO 2-6814 Days • HO 2-8292 Nights Weekends Holidays

P.S. As a special get-to-know-each-other offer, and to celebrate the opening of our new building, we're having an Ektachrome promotion. We'll process your 7252 Ektachrome film (normal processing), plus one light 7389 color work print with key numbers printed, both for 14¢ a foot.

This offer is good only through December 31, 1971.

another fine **CAMART PRODUCT**

NOW SHOOT MULTIPLE IMAGES FROM A SINGLE SUBJECT WITH THE CAMART OPTICAL FX UNIT

**Produces 2-7 Images in Rotation... Montages...
Special Distortions... Unlimited Variations**

Create unusual optical effects right in your own camera. Give your films drama and impact. The Camart Optical FX Unit can be used with motion picture cameras... TV cameras... animation cameras. The unit reproduces up to 7 multiple images from a single object. These can be rotated clock-wise or counter clock-wise... fast or slow... or photographed "still."

Camart Optical FX Unit with four surface prism, mount, revolving housing, camera base plate and double arm assembly **\$249.50**

Additional Prisms & Accessories Available. Prices on Request.

ARRIFLEX • BOLEX • FILMO • MAURER • MITCHELL & MANY OTHERS

ROTATOR LENS FOR CAMART OPTICAL FX UNIT FOR

**16-35mm &
TV Cameras**

The Rotator Lens reproduces images upside down, sideways or tilted at any angle. Scenes can be rotated a full 360° in clock-wise or counter clock-wise directions to create a spinning effect at any speed. Or by cranking back and forth, you can create a ship-board motion. Uses and applications are limited only by your imagination. Ideal for animation and live action commercials.

Camart Rotator Lens **\$150**
Adaptor for TV Cameras Available. Prices on Request.

paradox *continued*

PRODUCER: He seems like a nice fellow all right, but he's not terribly bright, is he? Is this his first film?

CLIENT: He's a real b... shit artist. I don't think I trust him into my plant... shoot our process machine... Some of those 'samples' we have been other product work. That's why he stopped them before the credits the end.

Conference #2:

PRODUCER: He seemed very enthusiastic. I guess he's not accustomed to seeing such creative work out in the midwest, huh?

CLIENT: Their stuff was full of cliches... the kind of things we stopped doing a couple of years ago.

Conference #3:

PRODUCER: I'm usually conservative, but I think we've got this one locked up. It's certainly our job unless he's on the take or something.

CLIENT: That's the worst stuff I've seen in my life. I wouldn't have them make a picture if they were a wholly owned subsidiary. I don't even like the decorations on their wall. Who's their designer? The Cookie Monster?

You think I'm kidding? I'm dead serious. You think I made up the comments? They are verbatim quotes. I'm a very good dialogue writer, but truth is stranger than fiction, and those quotations are better than anything I have ever written. *We're supposed to be professionals, and we're supposed to understand the dynamics of selling.* So what happens to our efforts? Why do they go off the track so often? Why do so many people buy pictures, and so few people sell pictures?

I think I know the answer. It begins with a faulty image of ourselves. Bobbie Burns said it very well a long time ago. If only we could see ourselves as others see us. I don't know whether there is such a thing as the "essence" of salesmanship, but if such a thing really does exist, it means being sensitive to the person to whom you are trying to sell a picture. If we all had a realistic image of ourselves to begin with, then we'd be able to project a more realistic image to our clients, customers and prospects.

And... we'd sell a lot more pictures.

This 4-inch attache case turns any office into a movie theatre in less than thirty seconds.

It's the Bohn Benton Institor; an elegant, rear screen (also front screen), Super 8, sound and motion picture projector.

It's light, only 17 pounds.

It's simple to operate. In less than 30 seconds, you can have it set up and running in broad daylight.

It's cartridge loaded. There's no film threading.

It's an attache case. Easy to carry. Just 4-inches wide.

And it's sensibly priced. \$300 for single units. Or as low as \$240 in quantities.

Write today for our new brochure: Bohn Benton Inc., 110 Roosevelt Avenue, Mineola, New York 11501.

Bohn Benton Institor

You'll be sold on the way it sells.

"WE HAVE REACHED a point where politics as usual is turning the American dream into a nightmare . . . Never have we needed a new hero worse than now," Gov. Dale Bumpers of Arkansas told Missouri Democrats in late July. "The anti-materialistic young must be convinced that there is nothing square and insensitive about economic security and basic physical comforts . . . It is a cruel hoax," he said, "to hold out the hope of overnight or instant liberty, instant everything to the poor, the minorities, the down-trodden. It is the ploy of the ambitious man."

Labor and management at odds, drug abuse flourishing and world problems undiminished . . . make us remember the admonition: "unless your employees and your publics are given the facts to *understand*, they will draw their own conclusions, often adversely to your interest and as much to their own interest."

Television's colorful tube, mighty as it is, left Americans in confusion and doubt in Vietnam. Simply reporting the strikes and their aftermath this past summer hardly explains the urgency of *productivity* and its effect upon all of us. The "key to plenty" remains unturned in the doorway to a more productive America, more jobs, more taxable profits, *more goods and services that can bring lower prices, less inflation.*

This, again, in TIME for corporate management and their trade groups to *take the facts*, in factual films, to its people and publics. The audiences and the means for getting to them are at hand; it costs pennies-per-person to deliver comprehensive knowledge via sound films through public service tv., in theater screenings, to adult and youth groups via hundreds of thousands of 16mm sound projectors all across the U.S.A.

Happiness Is: More Pictures

Happiness is a 25th "anniversary party" for Modern's president, Carl Lenz; the growing list of awards being won by U.S. entries (through CINE, of course) at overseas film festivals; the upcoming 12th International Industrial Film Festival scheduled for Barcelona with a good U.S. delegation again on hand, we hope.

And happiness is a fall upturn in factual, documentary films out of the most creative film makers in our business overdue at a time when Americans, (and Canadians) *need to know* as only film can bring it to them. Happiness could well be President Nixon wielding a "big stick" on the heads of do-nothing for a full day's pay rail-roaders and welfare "loafers" who would rather wait for a monthly hand-out than do an honest day's work. Happiness? Better call for a "miracle" out of the lethargic White House.

But maybe the President could be reminded to show Mao and Chou a print of *Project Mekong* and turn the tide to better lives for Southeast Asians by getting that tremendous, fruitful river control program moving toward completion. Despite the toll of war, Viet Nam and other populations dependent on that rice bowl are inexorably doubling in this decade. The Shell-sponsored Project Mekong, sadly enough, remains the only lucid exposition of where the *future* of Southeast Asia may yet lie.

While millions face starvation in East Pakistan.

Books That Make Films

There's a film in so many recent non-fiction books. Take a cue from John Burby's new book "The Great American Motor Sickness" (Little Brown, \$8.95), which takes you in the real realm of our urban transportation problems: is rightly called "the book of the year on transportation."

Look over the best-seller list of similar non-fiction titles and build on their popularity with followup factual films.

Audiovisuals 12-Month Year

The new trend to year-round schools means that audio-visual equipment will be getting more use, puts the heat on a-v administrators to streamline their teacher requests throughout the 12-month operating calendar. More than 600 school districts in the U.S. are currently studying the possibilities of expanding the school year to stretch their educational dollars.

A Word of Appreciation

Thanks to IAVA's past-president, Lee Coyle (Ohio Bell) and program

chairman of its recent Montreal meeting, Jim Damon (IBM World Trade) for those kind letters of appreciation for our coverage of this event.

The Past is Prologue . . .

15 years ago: the 85th Congress passed the National Defense Education Act to be administered by the United States Office of Education providing \$3 million alone for research & Experimentation in Audio Visual Media under Title VII. No whatever happened to all that money and where can *anybody* find anything really useful to account for all the grants-in-aid approved by the "newly established Advisory Committee on New Educational Media" which was supposed to "disseminate the information obtained by publishing reports, studies and surveys, preparing a publishing catalogs, reviews, bibliographies, abstracts and analyses, and by providing advice, counsel, technical assistance and demonstrations?" I hate to mention that an additional million was provided for each of the three succeeding fiscal years.

Ten Years Ago, This Month brought the news of Bill Connell's election as president of the National Visual Presentation Association; the Union Carbide exhibits and advertising executive was also to become head of the Industrial Audio-Visual Association. And in that September 1961 we were to comment that "sicken to read the list of aimless and . . . continued on page

Take this 30-second

CFI photoquiz

**Don't feel bad if you fail* because
you'll win a CFI Film Footage Estimator.**

1. How much will it cost me to have a 23 minute 16mm Eastman color release print made if the laboratory charges 7¢/foot?
2. How many 35mm feet would I have if I blew up my 23-minute 16mm picture?
3. What about reducing my 23-minute 16mm film to Super 8mm - how long would that be in Super 8mm?
4. How much ECO can I have developed for \$250 at 6¢/foot?

*We'll even send you one if you don't fail

Undoubtedly you could answer these questions. They're not really hard. But you probably couldn't do it in 30 seconds—you'd need a little more time, and perhaps even a pencil and paper.

That's why we're making our Film Footage Estimator available free to interested professionals in the motion picture and audio-visual industries.

It's handy. It has all the infor-

mation you need built right into its easy-to-read sliding scales. Answering the above questions in 30 seconds would be a cinch if you had one. And it's especially valuable for budgeting and planning.

How do you get a CFI Film Footage Estimator? Simple. Just send in the coupon on this page or write to us on your letterhead. We'll send you one with our compliments, along with any special service information you may need.

All right, send me a Film/Footage Estimator. Let me prove to myself that I can answer those questions in 30 seconds.

camera eye *continues*

visual research projects being undertaken for "National Defense" in colleges and universities that have themselves failed to produce answers to much more obvious educational problems." *Shades of yesteryear!*

That was the month (September 1961) when the Columbus (Ohio) Film Festival presented its 9th Annual "Chris" Awards and we gave our readers a 4-color "spread" on U.S. Steel then-current three-film "package" of *Rhapsody of Steel*, *Modern Steel Making* and *The Making, Shaping and Treating of Steel*. Standard Oil (Indiana) had just taken its comprehensive (84 min.) story of that company and all of its employees.

This was the month and the year when teaching machines and programmed learning began to proliferate. Complexities, cost and downright stubborn adherence to traditions, plus economic downturns in the later 60s have just about buried the teaching machine, with few exceptions. On a brighter note, Bob Seymour (now publisher) brought readers a memorable word-portrait of that dedicated filmmaker, Larry Madison.

Send CINE a Check Today

We don't often discuss our readers' corporate and personal donations. But ONE organization, cleared by the IRS as a tax-deductible item, deserves nationwide support: the Council on International Nontheatrical Events (CINE).

Headquartered (mail address for checks is 1201 16th Street, N.W.) in Washington, D.C. (zip: 20036), CINE is your audio-visual clearinghouse now handling thousands of carefully-selected factual film titles for over a hundred international film festivals all over the world. Unpaid CINE volunteers make up juries in many principal U.S. cities; CINE volunteers come to Washington at their own expense to finally select the "best of the U.S." to make up these "Olympic teams" which represent you and your company, your country in rugged competition.

Non-profit, utterly deserving of your support, tax-deductible . . . and headed by former NEA chief, Dr. William Carr, CINE needs your support: make it five bucks, ten bucks or a hundred and make it out to CINE today. We've served since its inception as board member and now on the advisory council.

You become a working member of CINE (associate memberships are \$5 or \$10) and you'll do it in the best cause we know of: your own OHC

INSTANT EVERYTHING

(the next-best thing to instant success)

oviemakers will agree that the difference between good footage and great footage goes beyond talent and technique—it's the little things that often make the difference. Little things like camera mobility, to follow fast-moving action. Or a few extra dB of silence on location. Little things... like the fleeting moment of news, captured because of the time saved in set-up time. Or an instant camera-mount that produces a "different" point of view you need. Little things do mean a lot. And, for those of those important "little things," professionals turn to Cine 60...

Instant Power

Wherever you go, whatever the shooting situation, Cine 60's exclusive power source gives you the power to run every professional camera on the market. The all-important mobility to go from the action to the interview. Available in voltages from 6V (and 7 amperes), it is a rechargeable nickel-cadmium sealed design and an auto-overload safety switch. With its charger and plug-in coiled cable, it is one of the most widely available power sources available today.

Instant Quiet

Time is golden, yet relatively inexpensive with the Cine 60 battery-powered fiberglass Blimp for Arriflex cameras. Only 19 pounds, the Blimp permits shooting in even the most restricted spaces—with all standard lenses (even 18mm, without vignetting!). Inside, the camera is securely mounted, yet isolated acoustically from its surroundings. On the outside, a gear-driven mechanism permits smooth, quiet follow-focus via a large easy-to-use knob. All controls and connections are conveniently located on a rear control panel.

Instant Camera Pod

Our single universal shoulder pod ("unipod") is a lightweight shoulder mount that accepts all cameras. Easily removable between takes, it keeps the camera in the ideal shooting position while offering the maneuverability of single-shoulder construction. Used with the Uni-Eclair Mount (detailed later), this is the only practical pod for the Eclair NPR-16. (By the way, we also have an excellent double-shoulder pod as well.)

Instant Camera Platform

Wherever and whenever you need a stable camera platform, chances are our Vacu-Platform can provide it. This rugged suction-actuated device can be positively fastened to any smooth surface (car tops, floors, etc.) without marring. A flick of a lever on its extra-large suction mounts does the job. Especially useful for low-angle work, it mates with standard tripod heads.

Instant Camera Mount

If you've ever watched a good shot pass you by while trying to thread a camera onto a tripod or shoulder pod, the Cine 60 Snaplok is your answer. Combining rapid, fail-safe operation with the ruggedness and precision alignment needed for day-in, day-out use, the Snaplok features light weight and high rigidity. One section mounts on the camera; the other on tripod or shoulder pod. A single pushbutton instantly separates the two. The base unit of the Snaplok is compatible with standard 1/4" and 3/8" sockets.

Instant NPR

Our Uni-Eclair Mount is just what the name implies—a universal mount for the Eclair NPR camera. Rugged, yet surprisingly light, it may be left on the camera at all times, ready for hand-held operation or shooting with a tripod or shoulder pod. And, it makes a handy camera rest between takes.

Instant Zoom

If you own one of the fine Angenieux zoom lenses, you can have smoother, more consistent zooming with one of our electric zoom drives. Available in four sizes (for the 9-95mm, 12-120mm, 12-240mm and 25-250mm), these units feature a precision gear assembly which mounts securely and directly to the lens barrels. The gear assembly, in turn, is rigidly coupled to a high-quality DC motor via a flexible shaft. The motor is powered by a transistor-regulated nicad battery pack featuring directional push-buttons and a smooth, variable speed control—all contained in a convenient, palm-sized case—with built-in recharger. (We also make an instant-mounting, collapsible rubber lens hood for the Angenieux 25-250mm zoom.)

Instant Rentals

Cine 60 also enjoys an excellent reputation for its line of top-quality rental equipment. All thoroughly maintained and delivered on-time. We'd appreciate the opportunity to fill your rental needs.

Instant Information

Whatever your filming needs, all you need to know for "Instant Service" is one name and one number:

Film Center Building/630 Ninth Avenue
New York, N.Y. 10036/Tel: (212) 586-8782

SPOILED SOUP Or Too Many Cooks Wreck the Film

By JOHN SAVAGE

IT WAS THAT THRILLING MOMENT for a producer of sponsored films, the first screening for the client of the completed motion picture.

The "client" was actually fifteen men, all members of the sponsoring organization, each ready to give his approval to the finished film.

But when the projection was completed, and the lights came on, what they gave was not approval. There was no criticism of the film's quality; the production values were excellent. But the point was raised that we were aiming this movie at the wrong set of people.

Instead of the agreed-upon general audiences—the general public throughout the country—it was suggested that this project should really be directed at a few influential individuals in key situations in the particular industry. Which would mean, of course, an entirely different film.

Now, it may occur to you that this little item, deciding just whom we were making the film for, should have been settled somewhere along the line before the movie was completed. If so, you'd be right; determining the target audience, surely one of the most important decisions to be made in the production of any film, is one of the first things to be decided.

But here we were in our smoke-filled screening room, after having spent almost forty thousand dollars of

the client's money, learning, according to a number of key people in the sponsoring organization, that we had been heading roughly a hundred and eighty degrees in the wrong direction for the past year and a half.

As writer-producer, I've made several hundred films, if you count the long ones with the short ones, over the past fifteen years. I believe I've experienced almost all the joys and frustrations that this business has to offer. The joys are many. The thrill of winning a top award in an important festival where your moderate-budget film was entered against the best that the most expensive production houses had to offer. The delight of producing a film for a client that not only pleases him personally, but that meets the specific need he had for a film with a high degree of effectiveness.

But all the while you're working on almost any sponsored motion picture, there's that little time-bomb ticking away in the background, the time-bomb that repeats and repeats in your ear: wait till they bring in those other cooks.

Cook's Law

For there seems to be a general assumption on the part of many film sponsors—we can call it Cook's Law: If the opinion of one knowledgeable person is good, the opinion of twenty people will be twenty times as good.

It has now been firmly established and it should be engraved on every film can and reel, that this is completely untrue.

Articles have been written about this before, but it's worth putting it in writing again. If your organization is planning to sponsor a film, the way to do it is appoint *one* of your people as the *film man*. He will be the liaison with the film producer; the producer will report to him, and only to him. **What the Hell Do They Want?**

It is not important that this man know film. That is the producer's job. It is important, however, that he know what the hell the company or organization wants this film for, what it wants it to do. The basic decision—the target audience and the overall objectives—must be made first, and they must be agreed upon by all the people in the sponsoring organization.

The producer can then bring in his suggestions to his client contact, who can approve or disapprove, or who can come up with intelligent changes based on his sure knowledge of what the company wants out of this project. And he keeps others in the organization up to date on the way the film is going. Since what we are discussing here is the ideal setup, we might as well go the whole way and add that ideally, the others do little second-guessing, knowing that the film project is being handled correctly. There are other cooks, in other words, but they're not out to spoil the soup.

Compare this method of film sponsorship with the situation in which I found myself in my opening story. It was a classic example of how to sponsor a motion picture.

A year and a half before the aforementioned fatal screening, I had begun work on the project. Although nothing was spelled out with absolute clarity,

continued on page 18

John Savage is president of Crest Productions, Ridgefield, Conn.

Now showing...the Reliables

Each monochrome model features three modules in rackmount configuration. Small size requires less rack space than similar units and permits monitoring of 3 separate video signals. High quality, all-purpose monitors with Setchell's exclusive UNIT-IZED® plug-in circuit modules.

New 10" monochrome video monitors offer horizontal resolution of 640 lines or better plus 100% solid-state circuitry for long-life reliability. Unit is available in rackmount or in attractive metal cabinet. A 12" model is also available.

In addition to 640-line resolution, the 16" monochrome monitors have all major operating controls located on the front panel for ease of operation. Front-panel screwdriver adjustments for vertical linearity, vertical height, and focus provide protection against accidental misadjustment.

Nineteen inch monochrome video monitors offer traditional Setchell Carlson quality, including exclusive UNIT-IZED® plug-in circuit modules for easy maintenance. Horizontal resolution is 640 lines or better. Available in rackmount or attractive cabinet models.

Professional quality 19" color video monitors offer broadcast quality at a modest price. Horizontal resolution is 300 lines (color) and all set-up controls are located behind a hinged front panel to prevent accidental misadjustment. Also available in 25" model.

23" monochrome monitor offers excellent picture quality and attractive styling at a low cost. Circuitry is 100% solid-state and the horizontal resolution is 640 lines or better. Monitor has a wide range of applications and a multitude of professional-quality features.

Regulated circuitry in the 25" color monitor provides extremely stable operation and prevents raster size or brightness deviations due to line voltage fluctuations. Horizontal resolution is 300 lines (color). Set-up and operating controls are front-mounted for ease of operation.

"Educator" Monitor/Receiver, 23" monochrome model, is designed specifically for educational and training applications. Controls are front-located. Tamper-proof control compartment door with lock is optional. Horizontal resolution is 600 lines or better with video signal input. Also available in 25" color model.

The Color "Educator" is a 25" model offering big-screen, sparkling color — 300-line (color) resolution — plus big-room audio. Designed specifically for educational and training applications, the "Educator" series Monitor/Receivers offer the utmost in reliability, flexibility, and ease of operation.

Setchell Carlson's solid-state UHF/VHF television receiver and RF demodulator provides a high-quality composite video signal and separate audio signal, assuring excellent monochrome and color picture quality. It is ideal for video recording and as a signal source for video monitors.

The quality and reliability of Setchell Carlson products is legendary. SC Electronics pioneered the concept of modular circuit construction. Every Setchell Carlson product features this concept in our UNIT-IZED® plug-in circuit modules, assuring operating dependability and maximum ease of maintenance. One hundred percent solid-state circuitry means maximum stability, long-life, low power drain, and a minimum of heat. Every feature in a Setchell Carlson product is meticulously designed to give you outstanding performance at a modest cost.

For many years, people involved in many different facets of broadcasting, closed circuit television, medical training, industrial TV applications, custom remote installations, and in the field of education have been able to depend on Setchell Carlson quality and reliability. It has become a tradition. We know that whatever your application, you will find a product to fit your need in the Setchell Carlson line.

Let your SC Electronics dealer give you a showing of . . . The new Reliables. Or, write to us for more information. Remember SETCHELL CARLSON, where quality is a tradition.

BUSINESS SCREEN

There is a moment in almost every film producer's life when he receives what might be called the Nadir of the Year Award."

he appeared to be three men who were in charge, three men I was to deal with. We made all the basic decisions, and we were in complete agreement. Everything began swimmingly.

But things happened. Normal things, like those that occur in any business. One of the men left the organization; a new man joined our group. He had different ideas. And you and you, they were good ideas. He had legitimate objections to some of the things we had done, objections based on the organization's policy. We refused to agree, for he was right. No one was so impolite as to point out that the objections were the sort of thing that the producer could not have dreamed about and that should have been settled within the organization before production of the film had begun, but, believe me, that was what I was thinking.

However, the damage could be repaired. We changed direction immediately and threw out a lot of the stuff we had shot. Money and time had been wasted, but now we were on the right track.

During the production, I was careful to submit progress reports to my three angels. As Stan and Ollie used to say, I told them what I was going to do, then I did it, then I told them what I had done.

Lifeguard Needed

Things continued swimmingly. But we were soon to need a lifeguard.

With the film completed, we arranged for the first screening, and when I learned who was to be there, I nearly let out

A solitary shriek, the bubbling cry of some strong swimmer in his agony . . .

Byron, no mean swimmer himself, wrote.

For I learned that a whole platoon of new people were going to be brought in to judge the film, people who had had nothing to do with the project until this moment. I was also startled to learn that one of my three angels was somehow not on the committee that was charged with this production and would not even be at the screening. He had simply been somewhere with the organization who was interested and had felt that he had something to offer. Being outside the

company, I had not known this and had naturally accepted his "suggestions" as orders. It had been he who had suggested that I make a trip to Ohio and get the cooperation of a certain city there to illustrate a point in the film. I had dutifully gone to this city and had enlisted the help of practically the entire community—mayor, police force, you name it—for this particular sequence. Little did they know they would all wind up on the cuttingroom floor; if it's any consolation to them, I wound up there myself on this job.

Nobody Wins 'Em All

If, as a film writer-producer, you feel you're good at your chosen profession, you've got to learn to accept the bitter truth that nobody wins 'em all. If you've got a lineup of top "name" clients, many of them repeaters, and a list of awards that fills a printed page, you can assume that you know what you're doing.

But there is a moment in almost every film producer's life when he receives what might be called the Nadir of the Year Award. You know you've been awarded this particular trophy when the sound of the projector stops at the first screening for the client and is followed by total silence. It is a special silence. For it was not that they didn't like the film; it was obvious that the production quality was excellent.

It's just that these people had very different ideas on this particular subject. And they began questioning—not so much the film as the basic assumptions on which the film was made. For the producer, sitting there exhausted after a year and a half of hard work, it is startling to hear that the film should not be aimed at the general public at all; it should be produced solely for a numerically small group of "influentials." Which means that of course the entire approach is wrong; it should be a nuts-and-bolts technical film. Another man at the screening emphatically states that such a film is not needed at all for this purpose. All that is required is a man standing there with a flip-chart with the relevant facts and figures on it. This, after a year and a half of work and the expenditure of almost forty thousand dollars!

These men were not out to spoil any soup. They were honest, concerned men, and they had the best interests

of their organization at heart. It was simply that a basic error had been made, an error that is made so often in film sponsorship. If you are going to give someone the power of life and death over a film, do not leave him out of it till the thing is completed.

If one individual had been appointed the "film man" at the beginning of this project, he would have—or should have—made it a point to learn the views of his peers. He would have made certain that agreement had been solidly reached on the basics. If it had *not* been reached—and given the disparity of views at the screening, I am inclined to believe that it would not have been—then the organization should definitely not go ahead with the film.

Forty Thousand Clams

A lot of money could have been saved, for, speaking of soup, almost forty thousand clams went into this particular chowder—and not one single release print was ever made or distributed.

I suppose I should not complain. I was paid for my work; suffering was not financial. But this sort of thing happens so often that it's worth spelling out the ways to avoid it.

If you're planning a film, keep these points in mind. (1) Appoint *one* of your people as liaison with the producer you choose; do not send the producer around to ten or twenty people who have varying, and ultimately confusing, views on the subject, with the result that he really never knows who, precisely, he is working for. (2) Make sure that all of you—everyone in your organization who will be concerned with this film—are in agreement on the basic issues and that you will therefore back up your film man in his decisions. If there is disagreement on the basics, do not go ahead with the project until agreement is reached. (3) When the film is completed, do not send it around the company for the opinions of others who have not been previously involved or consulted. When the film is shown to others, it should be as a fait accompli, a completed motion picture—you're not looking for ways to "improve" it.

Any quality restaurant, even the large ones with a lot of cooks working in the same kitchen, can turn out good soup. It's just a matter of knowing how.

New Eclair ACL: half the size and half the weight!

Sync sound and silent running in a camera that weighs 8½ pounds and is less than a foot long.

Ken Nelson has made a short documentary film with an ACL. "In the past, I've always looked around for a place to rest the camera between shots," says Mr. Nelson. "But with this new one, I found it didn't occur to me to put it down."

With its 200 foot magazine and without a lens, the ACL weighs less than 9 pounds and measures 11½ inches from front to back. Half the size of its competitors. Less than half the weight.

This is the most *inconspicuous* camera on the market. It's completely silent, of course. Hand-held, it's much smaller and lower than your head, as you can see. The bat-

tery weighs about a pound and fits into your pocket.

And the ACL is *fast*. You can change its clip-on magazine in less than five seconds. No threading; no need to touch the film at all. Film maker Eric Saarinen says: "This is the first silent camera that you can run with."

The ACL has a crystal-control motor. Sync sound with no connection whatever between camera and tape recorder. Fantastic accuracy. Sync error is less than ½ frame in one *continuous* 200 foot take. That's 8,000 frames.

What else? A universal lens mount that lets you use any lens

with any mount. Extremely and precise reflex viewing, its viewfinder that rotates 360 degrees. And a price that's considerably lower than the competition.

For more information, for our free ACL brochure.

Bell System films: As new as tomorrow

Telephone films in the modern manner
appeal to youth audiences of today.

DOZEN YEARS AGO, one of the most popular sponsored films to be seen in theatres and amongst 16mm group audiences was a picture called *Once Upon a Honeymoon*. It was presented by the Bell System companies, and it told how a song writer saved the day at a big musical show through a long distance telephone call. A typical "student" production with an intricate, impenetrable plot, it was not at all unlike the movies then playing at the local theatre. It fit the times, and it did a good job for the Bell System companies.

How times have changed! The film is now playing films like *MASH* and *Easy Rider*. And audiences, not only in theatres but in every type of group both in and out of plant, would hoot *Once Upon a Honeymoon* off the screen.

What has the Bell System done about it? Looking at an old flyer describing *Once Upon a Honeymoon* recently, Martin Duffy, American Telephone & Telegraph Company Film Director, said, "We'd never do things that way now. We have to be contemporary, or a little bit ahead of our times. Our work has to bespeak 1971 or 1972. It cannot date us."

As an example, he pointed out a landmark film of a few years ago—*Manner of Speaking*, which has been tremendously popular since its first production. It described how proper telephone usage and courtesy could help business efficiency. It was felt that the message and the plot could hardly be improved on, but the film has been completely redone in 1971 with changes in dress and camera

Generations say that in these changing times the traditional values accepted without question by the older generation are frequently being challenged by some of our youth. It is important for all of us to understand this social change—whether or not we are in sympathy.

techniques, which though seemingly superficial, are important in keeping the company completely in tune with the changed tastes of its audiences.

"We work very hard to maintain credibility," Martin Duffy went on to say. "Our benchmark today, as yesterday, has been top technical quality, but we go to great pains to speak in the language of the day."

To be contemporary, the AT&T film staff spends an inordinate amount of time looking at films. The best producers available are sought, and then product is viewed con-

stantly. No one is ever denied an opportunity to have his films seen by the film section staff.

"If we see something that suggests to us that this producer is the kind of guy who can do the kind of work we want, we go after him," Duffy says. "Many of the producers now working for us we sought out—we go very much on the work they've produced."

"In the case of the experimental film, *Operator*, it was only the second film ever made by the producer, Nell Cox, and actually the first—about a

French restaurant—had been seen by very few people. But we saw it, and we sought her out—to her astonishment. We thought we could corelate our needs with the sort of thing she had done in her first film. It resulted in one of the most popular and successful films we have today. It says a lot about us and our operators who could not have been done in a more conventional, structured film."

The Bell System still uses "established" producers with whom it has worked for many years, but of those who have progressed with

Operator, made for the young in mind and spirit, is designed to persuade young people that the telephone operator does an important job in servicing the public—a job that is basically demanding, exciting and interesting.

Phone Man shows telephone men as skilled craftsmen dedicated to serving the public in a variety of ways and locations—men doing a difficult, although satisfying job. It is aimed at recruiting 18-30 year olds.

Performance outlines for a non-technical audience the dramatic and stringent tests that help make the telephone a highly dependable piece of equipment.

How to Lose Your Best Customer depicts the problems of a small business that are occasioned by poor telephone operating habits.

Away We Go points up common hazards that lurk beneath the allure of getting away from it all. It promotes off-the-job safety for Bell employees, but will also be available to general public audiences.

Network uses multi-images, solarization and electronic music in portraying the physical human, organization and innovative resources that contribute to the nation's communications strength.

ers. "If they are still making films the way they did in 1950," Martin Dwyer says, "they don't fit in very well with our philosophy today."

AT&T's Film and Media Development Section of the Information Department, located in New York, is a centralized source of information on films and other media, as well as a production coordination and supervision center for all the Bell System companies. Film Director Martin Dwyer and his supervisory staff: E. Langsam, Film Production, Gene Loe, Film Research and Distribution, and Robert Randall, Media Development, operate on three levels of activity:

1) The section produces films to order for the Bell System companies and for AT&T operating departments. For example, a company or department might come to the Film Section for advice on whether a film could help solve a certain problem, and if so, what type of film would do the best job and what sort of budget should be allocated. The section then produces, with appropriate technical assistance, a product that will meet their needs.

2) The section produces films for public information purposes. The objective

here is to give believable and honest picture of what the Bell System is all about. This is now being done in small bites in contrast to a tendency some time ago to do the overall picture every time and use a crowbar to fit in this or that particular message. At present, the section is working in such areas as operators, phone men, how telephones are tested, etc. The objective of all this is to show the Bell System for what it is mainly through its people.

3. On the third level, the section produces experimental films, such as *Operator*, and the widely acclaimed new film, *Generations*, or the group of five films now being shown in colleges with great success under the group title, *Quintet*.

The Bell System was one of the first companies to employ testing of films, and is today conducting more extensive pre- and post-production research than ever before. Audience Studies, Inc., in Los Angeles, does most of the testing for the company. It runs tests each night in a theatre in Los Angeles with an audience of 300 looking at such fare as TV commercials, sponsored films, and TV pilots. Measurements are made of (1) audience interest, which is done

electronically with hand-controlled meters; (2) fulfillment of objectives, with extensive questionnaires; and (3) In-depth studies of before and after attitudes through group interviews.

All these measurements are made and presented as evaluations in a large detailed book on each film tested. AT&T often makes changes of weak spots discovered in films during production and will sometimes remake whole sections of a film when audience measurement indicates it is necessary. Testing is one more step in the company's determination to meet its audiences with material tailored for today's attitudes, in the language of today.

What do the Bell System films accomplish? Exact statistical evidence of accomplishments is difficult to determine, but there are good indications that films play a most important role in the company's training and public information activities. It is known that the popularity of the modern Bell System films before group audiences and as fare for TV viewers and theatre audiences has never been higher. Reliable estimates indicate that the Bell films play to some 200,000,000 persons a year, which is a considerable part of the company's contact with the public.

Boom Boon.

We've taken our most versatile, best-performing unidirectional studio microphone, the *Shure SM53*, and made it even more versatile by developing a complete boom accessory system that equips the SM53 for every conceivable boom and "fish-pole" application! Shure design engineers started with a major breakthrough in design: a small, lightweight, extremely effective isolation mount. They developed a super-flexible isolation cable, a pair of highly-efficient front-and-rear windscreens, and a 20" boom extension pipe. Finally, they developed a complete boom assembly that combines unusually small size with superb control and noise isolation. Result: an accessory lineup that makes every Shure SM53 studio microphone a complete microphone system! Write:

IT'S ROUGH SHOOTING IN AFRICA

Philadelphia producer runs into real trouble in Tanzania.

Sam Mirabello on location in East Africa.

THINGS ARE GETTING ROUGHER all over the documentary film producer. The more he goes, the more trouble he has. His hand is out, and he can't shoot. He has to pay off a hundred unwanted people. Not only that, but in many places it's getting more difficult to get a permit at all, even in tourist-oriented areas, because of government hindrances and impossible-to-get-prior-permits.

Perhaps more typical than not is the story of Sam Mirabello, of Sam Mirabello Enterprises, Inc., a Philadelphia area producer of ecological and religious documentaries. Recently returned from his second trip to East Africa, where he has produced three documentaries for the Africa Inland Mission and the Reformed Church in America, Mirabello reports that East Africans are becoming increasingly difficult about photography. Most of what he believes, is caused by tourists who want to capture the blanket-clad African tribesmen on film and willing to pay generously for it. But even way out near Lake Rudolf in northern Kenya, which doesn't get a dozen tourists a year, Mirabello found that every person in the village was out expecting a film from the film-maker. And he was one shilling (14¢) used to be considered plenty in most of East Africa, the Turkana tribe in the Lake Rudolf area now think nothing of asking ten shillings apiece. This is difficult if not impossible, on a missionary's budget. Even the missionaries, themselves, who work in medical clinics and schools in the area, threw

up their hands in despair at trying to keep their patients and students from badgering the cameraman for tips.

The film, by the way, is being made to raise more funds for more clinics and more schools for the Turkana people.

But Kenya, and the Kenyan people, are generally friendly to strangers. Not always so in adjoining Tanzania, where Mirabello and his crew ran into real hostility.

Shooting some mission activity near Mwanza in western Tanzania, Mirabello was picked up by four Tanzanian Criminal Investigation Division plainclothes men and accused of photographing without a permit, despite the fact that local authorities had assured him that permits were not necessary for making a religious documentary film.

Taken to the police station, the filmmakers were questioned over and over, third degree style, for six hours, about what they were *really* doing in Tanzania. Mirabello's \$15,000 worth of equipment was confiscated. (It is probable that the recent palace revolution in nearby Uganda had made Tanzanian security people more than a little suspicious of all strangers, especially of what some of them consider to be American "imperialists.") The arresting officer said he would ask for a maximum penalty of six months in jail and a 2000 shilling fine for wilful violation of Tanzanian laws: photography without a permit.

The Mwanza missionaries advised Mirabello that the best way out would

be to plead guilty and ask for mercy of the court, which he did, and was sentenced to two months in jail or a 300 shilling fine. "It was too good to be true," Sam Mirabello says, "I had visited an African prison once, and it's something to avoid, believe me. We gladly paid the fine."

With the case seemingly settled, the confiscated equipment returned, and a valid permit now in his pocket, Mirabello and his crew started for his next location assignment in a leper colony about 100 miles from Mwanza.

But in the middle of the day, the missionaries got word on their short wave that the CID men were not satisfied with the verdict and were still after the camera crew. So, it was decided that the only thing to do would be to get out of the country as fast as possible.

For two days, Mirabello and the missionaries raced through dirt trails in little visited parts of the Serengeti plains to finally make it over the border to Kenya on an unmarked road.

Does this experience discourage Sam Mirabello? Not at all. He plans to return to Kenya and Ethiopia next winter on another film for the Reformed Church.

"Those missionaries are doing a great job out there, and it's a story that ought to be told," he says. "Besides, the climate and scenery of Kenya can't be matched, and the government is stable and friendly."

But he'll think twice about trying to make films in Tanzania again.

Continued on page 28

SAM MIRABELLO has some tips for producers planning to work in the hot countries often out of touch of civilization:

"After a couple of trips loaded down with dozens of separate equipment cases, I finally worked up a fitted steamer trunk packed with foam and cut out for all my stuff. It goes on the plane with me, goes in the car with me, and I wouldn't be without it. It was well worth the \$875 freight charge it cost me to get it to Africa."

"The Arriflex people and their dealers in Philadelphia, O. H. Hirt, gave us fantastic cooperation in

helping to plan our equipment. We had special electrical cables to drive the cameras directly off the Land Rover batteries, when necessary. We also had special fittings to line up our Cine 60 battery belts on to local power supplies-kerosene powered generators, and sometimes even windmill-operated electrical systems.

"When you're with primitive people the tripod can be a real hindrance. It looks overpowering, it scares people and it's not adaptable. I'm an old tripod man myself; I used to think that if you didn't have a tripod you were a bum, but I used

an Arri shoulder brace almost all the time this trip, and it worked out fine."

"My basic equipment consisted of one Arri BL with APEC, two Cine Specials, two Nagras, two Colortran Mini-Pros and some quartz lights I rented in Nairobi and never used. The Cine Specials were brought because they're spring wound and we had anticipated power supply problems. But as it turned out, the BL did 90% of the work, and never stopped running.

"Film was 7252 for all outside work, and 7242 pushed one stop for interiors. I shipped my film home by air from Nairobi to the WRS lab in Pittsburgh and got fast reports on results by amateur radio linking me through the missionaries' station in Kenya to a ham operator friend in Philadelphia.

Sam Mirabello could also have added that it helps immeasurably to have had lots of prior experience shooting under difficult conditions. He got his experience the hard way as a cameraman with Channel 3 in Philadelphia, and has since gone on to produce a number of award-winning documentaries on such far ranging subjects as gypsy moth, American Indians, conch fishermen and Amish farmers.

I cut the cost of listening to your slide projector.

Remember when you used to have to fumble around with scripts and switches during your slide presentations?

You still do?

Now you can afford not to. Our Sound-O-Matics cost less than any comparable equipment.

Sound-O-Matic works with just about any automatic, remotely controlled slide projector to give you up to 60 minutes' worth

of audio commentary, music, and sound effects. And it will forward the slides automatically, on inaudible electronic cues you program onto the tape cassette sound track.

You sit back with your audience and enjoy the audio-visual show.

You also can have

Sound-O-Matic in a play-back-only version. Or one that will pre-program pauses for question and answer sessions. Or one that records audience replies on a punched card. All at prices that make Sound-O-Matic the soundest sound investment you can make on your slide presentations.

Write for details, or ask for a live demonstration that speaks for itself.

Optisonics Corporation

Montgomeryville, Pa. 18936 / (215) 368-0111

Gentlemen

Why should I put up with a silent slide projector when talk, music, and sound effects cost so little?

meetings & seminars

NAVA—Cincinnati

The National Audio-Visual Association drew a good-sized and active crowd of dealers, manufacturers, educational and industrial users, as usual, to its annual convention, this year in Cincinnati.

Displays from over 250 companies almost filled the exhibit area, although many of the larger and more elaborate exhibits of previous years seemed to have diminished in size, reflecting a general tightening of the belt throughout the industry.

Very little that was radically new was on display. In fact, drawing almost as much attention as the equipment in the exhibit hall was Eastman Kodak's prototype of a new Super 8 sound projector shown, supposedly still under wraps, in a Cincinnati hotel room. With a low profile and attractive wooden base, the portable cartridge-load projector will be sure to stir up a great deal of interest when it reaches the market, probably late in 1971 or early 1972.

Dozens of new exhibits for programmers, faders, dissolves and multi-projector stands reflected the definite trend to increased utilization of multi-media equipment, by all phases of A-V users.

Robert P. Abrams, Chairman, Industry & Business Council

The regular meetings of the Industry and Business Council and the Audio-Visual Systems Council were filled to standing room capacity, indicating a growing awareness amongst dealers that their future sales efforts must have a broader approach than just to the local school systems. Such leading industrial dealers as Hal Gusofsky of Colorado Visual Aids, Denver, and Douglas Nichols, of Newman Visual Education, Grand Rapids, Mich. aroused much interest by their accounts of the right way to reach and sell the industrial buyer.

At a meeting of the NAVA Equipment Manufacturers Council, it was apparent that some exhibitors will find

it difficult to mount exhibits at the two conventions NAVA plans for the fiscal year 1972-1973 (July '72 in Kansas City and January '73 in Houston). One manufacturer calculated his NAVA convention participation expense at over \$20,000, and warned that if two shows were planned in one fiscal year, something would have to give: smaller exhibits, or skip a show. However, the Association's budget is sorely pressed: 40 percent of its income comes from the Convention and Exhibit, so the two shows in a six-month proximity are considered to be a vital necessity.

A new slate of officers was elected at the Convention, including Chairman of the Board, Alan P. Twyman, Dayton, Ohio; President, Boggs E. Huff, Nashville, Tenn.; First Vice President, Robert R. Hiller, Chicago; Second Vice President, Matt Dowling, Oklahoma City; Treasurer, Malcolm P. Ewing, Jackson, Miss.; and Secretary, W. James Orth, Des Moines.

SMPTTE-MPL—Memphis

One of the major audio-visual events in the South each year is the annual July meeting of the Nashville section of the Society of Motion Picture and Television Engineers, hosted by Motion Picture Laboratories, Inc., of Memphis, in co-sponsorship, this year, with the Audio-Visual Department of Memphis State University.

Almost 200 industry, education and TV producers from all over the Mid-South gathered at the beautiful new Memphis State University Center Auditorium for a full day's schedule of talks and demonstrations by such authorities as Jack Behrend, of Behrend's Inc., Chicago, on new production equipment; Bruce Jamieson, of Jamieson Film Company, Dallas, on new production techniques with reversal masters; Ed Garrigues, Director of Cinematography at South Carolina Educational Television Network, Columbia, on post-production fogging of Ektachrome; Sid O'Berry, Technical Director of Audio-Visual at Regional Medical Center, Nashville, on Super 16; Peter Ildau of Arriflex on the new Arri cameras, recorders and projectors; Alan Stensvold, Hollywood photographic director, on modern cinematography; Tom Hope, of Hope Reports, Rochester, N.Y., on visual communications statistics; and Stan Sobel, New York free-lance writer and Contributing Editor of *BUSINESS SCREEN*, on the value of scripts in film

preparation and production. Speaking for the hosts and demonstrating new methods with new film stocks were Frank McGeary, Blaine Baker and Jim Solomon of MPL.

Tom Hope's preliminary figures of his new *Hope Reports* for 1971 confirmed that industrial films, had, indeed, taken a beating in 1970. According to his figures, industrial film production was off 10 percent, with in-plant production about even, while independent producers' output fell 25 percent, from 2800 titles in 1969 to 2000 last year.

Other statistics mentioned by Hope (who gave a similar digest of his findings to NAVA's Industry and Business Council a week previously) were that the visual communications field as a whole was off one percent for the year—the first dip since 1958. Hope estimates 1970's volume for the AV industry at \$1,074,000,000 for hardware and software, with another \$400,000,000 for salaries and other administrative expenses within the industry.

Some significant gains were noted, however: Super 8 projector sales went up 30 percent, while multi-media programming devices were up a whopping 47 percent. Videotape recorder equipment sales dropped 24 percent, most of which can be attributed to a decided fall-off in educational use caused by stringent school budgets.

Hope said that from his analysis of the statistics, it looks like the pendulum will now swing strongly to greatly increased A-V use by industry during the coming decade—enough so that he forecasts expenditures for education and training by industry and government to reach a parity with education in schools by 1980—amounting to something like \$70 billion annually, and a lot of this will go into media.

Sony—New York

The big news at Sony Corporation's America's Press Seminar, June 30, New York, is that the company is today mass-producing its color Vide

cassette player at the rate of 2000 per month. This rate will be accelerated each month during the year so that by early 1972 "whatever volume the market demands will be met."

Sony spokesman, Richard F. O'Hon, vice president, said that the company would first concentrate on markets that can make the widest use of videocassettes: business, government, education, medicine and the military.

The Sony system, as demonstrated a year ago, and as now in full-scale production, incorporates a chromium dioxide 3/4" tape in a book-size cassette that has a maximum playing time of 60 minutes. The player, which costs for \$800, will play through any U.S. standard b/w or color television. Provision is made for stereo or two separate sound channels on the tape. A recorder-player will be marketed in the spring of 1972 for \$200.

Introduced at the Seminar for the first time was the D-100 duplicator system which includes a master video recorder, master control and as many duplicator racks as are required, each duplicating four cassettes at a time. Two-inch chromium dioxide helical-scan tape is used as a master. Sony will install and operate three duplicating systems in the U.S. by the end of 1971, and expects to be able to supply delicate cartridges for approximately \$5 plus raw tape cost for orders of \$50 and up. The cost for quantities of 20 will be about \$20 plus raw tape cost. Duplication systems will also be available for sale.

Shortly after the Sony Press Seminar, Richard J. Elkus, Jr., General Manager of Ampex Corp.'s Educational and Industrial Products Division, said that Ampex will accept distributor orders for its Instavideo cartridge videotape systems for delivery in late 1971. Ampex Instavideo is now being phased into production by TOAMCO, the Toshiba/Ampex joint venture company in Japan. Half-inch videotape will be used.)

And Cartridge Television, Inc., a subsidiary of Avco Corp., announced a public offering of 1.1 million shares of stock at a \$20 per share. Avco's system, known as Cartrivision, seems a bit farther off than Sony or Ampex.)

TO PRODUCTION & LABORATORY EQUIPMENT

OF PARTICULAR INTEREST

TO THE INDUSTRIAL FILM PRODUCER

CAMERAS

ARRIFLEX CORP. OF AMERICA

The 16BL is a quiet-sound convertible camera for double or single system sound recording. The 16S/B is compact has 100' internal film capacity with 200' and 400' external magazines with torque motors. The 16M/B features greater capacity. A wide range of accessories is available. Also Model 16 BL silent 35mm camera.

AURICON

Magnetic 16mm cameras with sound head for recording on prestripped film; Cine-Voice II, Pro 600, Pro 600 Special, Super 1200 self-blimped models for optical sound.

BELL & HOWELL

Model 70 16mm cameras: 70DR has 7 framing speeds, 70 HR for magazines. Also Eyemo 35mm.

KODAK U.S.A. INC.

Kodak Scoopic '16' motion picture camera w/13-76mm zoom lens, motor drive, fully automatic exposure system with manual override, contoured hand grip. Also double Super 8 model.

BOLEX CINEMA BEAULIEU/HERVIC

16B Automatic features extra-luminous reflex viewfinder, iris diaphragm; speed control allows sync sound recording; 200 ft. magazine; 1 amp. battery; accepts lenses for micro, macro, telephoto cinematography. Also 4008ZM Super 8 camera with sound-sync capability.

ECLAIR CORPORATION

Silent 16mm NPR permits sync sound without a blimp; 5-second magazine change; 400 loads, reflex viewing; rotating two-lens turret, crystal control sync motor, battery operated; variable shutter. Silent 16mm ACL has clip-on magazine; lightmeter behind lens.

INTERCINEMA CORP.

Doiflex 16 has reflex viewing, three lens C-mount turret, battery operated motor. Accessories available.

MITCHELL CAMERA CORP.

35mm and 16mm motion picture camera systems.

PAILLARD, INC.

Bolex H-16 Rex-4 and Rex-5 cameras have reflex viewing systems, variable shutter speed, rewind, automatic threading and trip's turret. Rex-5 has 400' capacity magazine. 16-Pro has automatic load, motor zoom, noiseless, built-in magnetic sound.

PRODUCTION ACCESSORIES

BERKEY COLORTAN

The Mini-Crab dolly; crabs, tracks, has front wheel steering; will carry camera, operator and assistant; self-contained CO₂ powered hydraulic system.

BIRNS & SAWYER

Star dolly is crabbing spyder type with pump-up center column.

CAMERA MART

Elemack dolly is small, crabs in any direction.

CENTURY PRECISION OPTICS

Custom made sound blimps.

CINEKAD ENGINEERING CO.

Cinekad camera brace supports all 16mm-35mm handheld movie cameras.

CINE 60

Electric zoom drive for Angenieux lenses. Powerbelts for Arriflex, Eclair, etc. Sun Gun belts. Uni-Pack battery supply for Arri 16S and 16BL. Fiber-glass blimp for Arri 35 IIC and IIB. Stretch power cables.

CINTEL CORP.

Motor-driven pedestal, tripod-dolly, cradle heads, friction heads, line of studio equipment.

VICTOR DUNCAN, INC.

Lightweight power source drives Auricon, Arriflex and Eclair cameras.

F&B/CECO

Sync motor for Eclair NPR; motors for other cameras; sync, variable speed, stop-motion.

FREZZOLINI ELECTRONICS

Portable power packs for driving camera motors.

JACK A. FROST

Generators, transformers and rectifiers.

LAFAYETTE INSTRUMENT CO.

Time and motion study equipment. Camera drives for Bolex H-16, Bell & Howell 70 Series, Eastman Kodak Cine Special and K-100. Plus other accessories for time lapse, surveillance, animation and memo motion.

LEOPOLD ENTERPRISES

Leo Pod for all 16mm cameras.

MAGNASYNC/MOVIOLA CORP.

Crab dolly for 16, 35mm cameras. Mobile camera support places camera in any position.

NATIONAL CINE EQPT.

Hydrofluid Master tripod has fluid head, pans 360°, tilts -75° to +75°. Also Hydrofluid Junior, Model C and Model H.

O'CONNOR ENGINEERING

Line of pan and tilt fluid-motion picture camera heads. Level heads and pedestals.

JACK PILL & ASSOC.

Kelly Zoom Control Pod, Model JP 1001, provides camera support with control of zoom, focus and motor without shifting hand position. Also, the

Powerator, an efficient, low cost, mobile electric power unit

SOS PHOTO-CINE-OPTICS

Tel-Amatic Bolex conversion enables Bolex to take 400' or longer runs of film. SOS Sound Seal Blimp for Arriflex cameras and Cine-Voice conversion for mounting 400 or 1200' magazine on Auricon. Light weight SOS Body Brace.

TRAID CORP.

Magazines, precision film transports, disc shutters, portable power supplies and power converters.

YARDNEY ELECTRIC CORP.

Compact high-energy rechargeable battery packs; lights; sound equipment. Battery chargers and inverters.

ANIMATION & TITLING EQUIPMENT

COMPREHENSIVE SERVICE

Optical lathe, designed for both vertical and horizontal operation and critical zoom movement. Can be used with 8, 16, and 35mm cameras for shooting moving and superimposed titles, animation, background and depth effects, as well as conventional copy work.

FAX COMPANY

Cells, paper, peg bars, ink, discs. Complete animation supplies.

MERV'S ANIMATION AIDS

Complete package of essential equipment for the design and production of all types of animated or still photographic art visuals. Animator's discs, inking boards, checking boards, animation punches and camera stands.

PAILLARD, INC.

The Super Titler can be used with many 16mm cameras, including the Bolex H16 and H8, in either vertical or horizontal position.

RICHMARK/OXBERRY

Two Oxberry Animation Stands available: 5332 (Filmmaker Series) designed for the industrial and educational 16mm film producer, and the Model 5442 (Master Series) designed for the professional animator.

SOS PHOTO-CINE-OPTICS

Tel-Animastands for special effects and animation work.

LENSES

ANGENIEUX CORP.

Zoom lenses for all major motion picture cameras.

CENTURY PRECISION CINE/OPTICS

Primary and zoom lenses for motion picture and TV cameras.

CUSTOM PHOTOGRAPHICS

Filter holders for all Angenieux lenses

DYNASCIENCES CORP.

Dynalens provides steady image in bumpy conditions.

HIMOVITZ & ASSO.

Sunburst filters create star effects.

LA GRANGE INC.

Revolving prisms and faders.

TIFFEN OPTICAL CO.

Color, neutral fog filters. All sizes.

ALSO

Angenieux, Berthiot, Canon, Pan Cinor, Rank-Taylor-Hobson, and Zeiss primary and zoom lenses are available from most motion picture equipment dealers.

LIGHT METERS

KLING PHOTO CO.

Gossen Luna-Pro CdS exposure meters.

PHOTO RESEARCH CORP.

Spectra Footcandle meters have 3 ranges.

LIGHTING

BARDWELL & MC ALISTER

Complete line of studio and location lighting. Individual fresnel spotlights, stands, accessories, plus lightweight Tungsten-Halogen models in single units or complete kits.

BERKEY-COLORTRAN, INC.

Motion picture lighting equipment. Mini-Pro Kit packs 3 light, stands and accessories in one case.

BIRNS & SAWYER, INC.

Line of studio and portable lights including B&S Snooper underwater light for depths to 5000'.

THE BREWSTER CORP.

Polecat telescoping and spring loaded supports for photographic lights and backgrounds.

FORMTEK, INC.

RDS Aero Kit packs three lights into kit.

JACK A. FROST

Rental, sales and service on wide range of lighting equipment.

HERVIC/CINEMA BEAULIEU

Hervi-Quartz Location Lighting Kits, lightweight, self-contained.

LOWEL-LIGHT PHOTO ENGINEERING

Light-weight, compact Lowell Link location lighting equipment travels in one case. Softlight folds into attache case.

MOLE RICHARDSON CO.

Lighting equipment for motion picture and TV studios. Arc lamps, Molequartz kits, wide range of accessories.

JACK PILL & ASSOC.

Giraffe line of portable studio stands.

CHARLES ROSS, INC.

Lighting equipment, grip equipment, props and generators available for sale or rent.

SMITH-VICTOR CORP.

Quartz studio kits.

SYLVANIA ELECTRIC

Sun Gun is portable battery-operated light

UNILUX

System 700, a strobe light for synchronous use with motion picture camera and videotape. Up to 250 flashes per sec. with 250 ft. candles over 300 sq. Lamp head converts from spot to wide

JOHN WEBER CO.

Generators and lighting equipment.

EDITING, SPLICING & INSPECTION EQUIPMENT

ALLIED IMPEX CORP.

Hahnel motorized 16mm and 8mm splicers make wedge-shaped splices

BIRNS & SAWYER, INC.

Film, Splicers — Model 2668 Insta. Splicing Block for 16mm film/tape. Model 2669 Instant Splicing Block for 35mm film/tape.

CAMERA MART

Handiola editing equipment for 16mm and Super 8.

DU PAGE METAL PRODUCTS

7616 Cine Splicer, automatic dry splice for motion picture film.

F&B/CECO

Editing tables and bins. Viewers for 16 and 35mm editing. Automatic splice and Magic Mylar splicing tape.

FILMKRAFT SERVICES

Model 16 O/M runs up to 3 magnetic tracks with a picture.

GRISWOLD MACHINE WORKS

Splicers for 8 and 16mm.

GRYPHON CORP.

Compact bench rewind units feature special lineal torque motors with stressless power controls.

THE HARWALD CORP.

Editing and viewing equipment, electronic film cleaners with cleaning and protection attachment. Film inspection machines with sound track, sprocket thickness, splice and scratch defect detection; allows for immediate correction.

HOLLYWOOD CAMERA CO.

HollyCam portable hot splicer cuts splices and welds in one operation. Features built-in carbide film scrape

HOLLYWOOD FILM CO.

Manufacturers and distributors of all types of film handling devices, rewinding and splicers.

ALART VICTOR CORP.

Large film editing equipment includes 16mm Viewers, rewinds, splicers, frame counters, both as components and as complete projector editors. For 8mm, Super 8 and 16mm film.

SEM ELECTRONIC MECHANIC CORP.

SEM Universal horizontal editing machine.

SPIESNER-SMITH CORP.

16 and 35mm professional projectors for fast, safe, high speed viewing and inspection. Ultrasonic cleaner for restoring clarity.

MAGNASYNC/MOVIOLA CORP.

Series 20 editing machines for 16 and 35mm. Also rewinders, editing tables, viewers and bins, synchronizer sound readers available for optical or magnetic sound or combination. Moviola console editor.

MAIER-HANCOCK SALES

600 editor is designed for continuous, professional use; features four rollers, one sprocket wheel and a film pressure plate with special mirror finish to prevent scratching. Portable Hot Splicer cuts, splices and welds in one operation.

MASTEREEL IND., INC.

16 and 35mm split reels. Forms two separate usable film flanges, each capable of handling film on negative or positive cores; or tightwound just as when flanges are joined to make a reel. Aluminum, non-magnetic, 1200' size.

RAY MERCER & CO.

Film patches, Mercer film rule — 16mm, 35mm and 16/35 combination.

MOTION PICTURE ENTER.

The Pro Splicers feature automatic scrapers, stainless steel construction and precision pins. Available for 16 and 35mm film.

NEUMADE PRODUCTS

A complete line of film handling and editing equipment including tables, rewinds, (hand and power) synchronizers, splicers, cleaners and accessory items.

PARLIAMENT EQUIP. CORP.

Guillotine splicer uses Mylar tape. Models for all sizes of film.

PAULMAR INC.

Automatic 16mm film inspection & splicing equipment.

JACK PILL & ASSOC.

Pic Sync editor with synchronous motor modification for forward and reverse operation at sound speed. Three position switch control forward and reverse and in the center position through an electro-magnetic clutch disengages motor to permit manual operation.

PRECISION LABS.

Film editor and optical sound reader for matching lip-sync. Also model with

unitized synchronizer and 16mm projection viewer.

PRESTOSEAL MFG.

Thermo-fusion butt-weld splicing equipment.

RAYFIN ENTERPRISES

Steenbeck horizontal editing machines.

SOS PHOTO-CINE-OPTICS

SOS/Prevost editing table is horizontal and portable. Pic-Sync synchronizer, footage counter, viewer and sound reader.

TRAID CORP.

Hot Splicers for 8, 16, and 35mm.

ZEISS IKON VOIGTLANDER

Editor with bright viewing screen for 16mm.

ZYCO MFG. INC.

Double rank film slitter.

RECORDERS SOUND GEAR

AMEGA INTERNATIONAL

Sound reproducers in single, double, triple, combination and automatic models. Also portable units, modular control centers and amplifier systems.

ARRIFLEX COMPANY

Arrivox-Tandberg 1/4" professional tape recorder with pilotone system.

CAMERA MART

Crystamatic camera control system eliminates sync cable, provides automatic clap mark and counts take.

CINEMA BEAULIEU/HERVIC

Uher 1000 Report Pilot 1/4" tape recorder, designed for sound/film synchronization.

ELECTRO-VOICE INC.

635-A microphone for studio and location work.

GOTHAM AUDIO CORP.

Stellavox Swiss-made portable recorder for stereo sync recording.

MAGNASYNC/MOVIOLA CORP.

Synchronous magnetic film recorders and sound equipment, pickup recorders, studio-mixing consolettes.

MAGNA-TECH ELECTRONIC

Complete line of professional motion picture studio sound recording and projection equipment.

NAGRA MAGNETIC RECORDERS

Nagra IV 1/4" synchronous recorder for motion picture work.

PERFECTONE

Crystal sync motors for various cameras.

PHILIPS BROADCAST EQUIPMENT

Norelco condenser mikes for production use.

RCA CORP.

Magnetic and optical film recording systems, available for 35mm, 16mm, and Super 8 film.

RYDER MAGNETIC SALES

Nagra 1/4" synchronous tape recorder, Sela four dial mixer, Sennheiser & Beyer microphones & headsets, Talmak footage counters for projection & dubbing studios, Ryder sync-generators for 16mm and 35mm cameras.

SENNHEISER ELECTRONIC CORP.

MKH 805 condenser shotgun mike.

SHURE BROTHERS INC.

Professional broadcasting microphones, tape recording and general purpose uses. Also, microphone mixers.

SOS PHOTO-CINE-OPTICS

Magnetic striping machines, combination sound readers/viewers and sound recorders and mixers.

STANCIL-HOFFMAN CORP.

Magnetic film recorder/reproducers for 16mm, 17.5mm or 35mm as ordered, complete with microphone mixers and interlock motors.

TRANSIST-O-SOUND

Model 3-CA amplifier for use with Auricon and Bolex 16-Pro.

VANDERLEELIE FILM

Single system sound modules for Bolex, Beaulieu, and most other 16mm cameras.

WESTREX

Sound recorders and reproducers for motion pictures.

WIDE RANGE ELECTRONICS

Magnetic recorders, dubbbers and mag-to-optical transfer.

**Do you want a
helical scan video tape that
is longer lasting with fewer
dropouts, has brighter color,
causes less head wear...
yet costs less?**

HP-100 VIDEO TAPE with Microkote-V™

HP-100 video tape is coated with Tru-Balance Microkote-V®, Audio Magnetics new development in the dispersion of magnetic particles for brighter color definition with more contrast and clarity, and fewer dropouts.

The flow-activated binder system is designed with polymers that counter the damaging effect of heat generated by the high velocity of the rotating video heads. A dual lubrication system provides an external lubricant that reduces static friction and an internal lubricant that rises to the surface as the tape is played, extending the performance life. HP-100 video tape is engineered to EIA and NAB specifications.

Available in ½ hour and 1 hour lengths.

Write for literature and the name of your local A/V dealer.

Line of optical printers in 8, 16, 35 and 70mm.

SOS PHOTO-CINE-OPTICS 527
Professional printers for all formats.

Masters of Sights and Sounds, summa cum laude.

The simple concept of communicating best through sight AND sound has now graduated to the sophistication of synchronized sound/slide presentations. Here are TWO fully automatic systems by Montage, who practically wrote the book.

Both provide complete sound synchronization (via tape cassettes on which you can easily record narration, music, sound effects) cued to your own (or available) slides, with a unique 4-track system that eliminates cross-talk, bleed and false triggering. Both units are compact, solid-state, totally reliable — and come with such thorough, easy-to-follow instructions (in sight and sound) that anyone can work them! Professional sound quality for anything from a conference room to an auditorium PA system. Each with a full one-year Warranty. Choose the one that best suits your needs. Either one is a sound idea!

Montage/Narrator 1000

Specially designed for heavy-duty use. Can be integrated with your Kodak Carousel or Ektagraphic remote-control slide projector. Complete \$349.95

Montage Audio/Male

Ultra portable, weighs only 4½ lbs. Designed to operate with all remote-control slide, filmstrip and stop-frame movie projectors. Complete \$189.95

For details on "HANDS-ON" 14-DAY FREE TRIAL OFFER, and special volume prices, write: Dept. BS-91 Montage Productions, Inc. / 49 West 27th Street / New York, N.Y. 10001 / (212) 683-7387

MUSIC AND SOUND EFFECTS:

Essential tools of the professional
Film Media Producer

MAJOR" offers you a full 73 hours of background
production music for titles, bridges, background—
or scoring, editing, recording and dubbing music
for your:

- DOCUMENTARIES • COMMERCIALS
- TV FILMS • FEATURE PRODUCTIONS
- SLIDE FILMS • INDUSTRIAL FILMS
- ANIMATION • SALES PRESENTATIONS

MAJOR" specializes in sound—you get exceptional
technical know-how and beautifully recorded origi-
al music on LP records or 1/4-inch tape, or on 16 or
5mm Mag. Tape ready for a mix.

IMPORTANT: "Major" owns its own copyrights on all production
good music in its library. World rights available to you on a
completely sound legal basis. Re-recording rights on a "per selec-
on" basis or "unlimited use" flat fee arrangement.

THOMAS J. VALENTINO, INC.

50 W. 46 St., New York 10036 (212) 246-4675

If it's your
pièce de
résistance,
shouldn't it arrive
in one pièce?

Chances are you invest a lot of time, money and talent
in a film or tape. You produce a masterpiece, then
entrust it to less-than-rugged reels, cans, cases.

It doesn't make a whole lot of sense. Especially when
we produce a whole line of Plio-Magic film (and tape)
handling equipment. It's rugged, lightweight and inex-
pensive.

You can choose from a complete line of reels. For
16mm, 8mm, Super 8, 35mm, microfilm, 1/4" tape and
video tape.

You can choose from a complete line of cans. (To hold
all our reels as well as storage boxes for Technicolor-
type film cartridges.)

You can choose from a complete line of cases. For
films. For filmstrips. Even for Fairchild-type film car-
tridges.

And, lastly, you can choose from the rest of our line.
From our film cores (8mm to 105mm), from our Reel-
Pak (self-enclosing reels), 8mm to 35mm, from our
idler/drive rollers (8mm to 70mm), and from our linear
polyethylene ball-bearings, with ground glass balls.

Send for our catalog. It could just keep you from
going to pieces.

Plastic Reel Corporation of America, 640 So. Com-
mercial Ave., Carlstadt, N.J. 07072.

PLIO-MAGIC®

Someday, you'll wind up with plastic.

picture parade

REVIEWS AND PREVIEWS OF NEW VISUALS

The Black Athlete

Wm. Teacher & Sons, Ltd., of Glasgow, Scotland, and Schieffelin & Co., importers of Teacher's Scotch, have sponsored a new film, *The Black Athlete*, which tells of the accomplishments and problems of the ordinary non-super-star black athlete.

Olympic track star Jesse Owens speaks the prologue to the film which sets its perspective. He says that the black athlete's role in sports must not be judged solely by the treatment accorded to a Willie Mays or an O. J. Simpson, but by the lives and careers of more ordinary black athletes. The film itself is composed of a priceless collection of sports footage, written, directed and produced by Bud Greenspan. Distribution is by Modern Talking Picture Service.

Law Enforcement Training

A low-cost training film program for use by law-enforcement agencies is available from The Police Training Films Division of Halex, Inc., Hollister, Calif.

Law enforcement single-concept training films utilize Technicolor Super 8 projectors

The program, which consists of a selection of 3½-minute film loops supplied in cartridges, together with a projector, covers such topics as: *The Field Search, Use of Handcuffs, Come-Alongs, Defensive Tactics, Stopping the Traffic Violator, Detection of the Drunk Drivers, Examination of a Drunk Driver, etc.*

Sears Promotes Women's Golf

America's leading professional women golfers are featured in a new motion picture released by Sears Roebuck & Co.

Called *Then Game Is Golf*, the 28-minute color film was produced in cooperation with the Ladies Profes-

sional Golf Association and features Shirley Englehorn, member of the Sears Sports Advisory Staff and one of the tour's all-time money winners.

Tracing the history of women in golf, the film points out that during the 15th Century Queen Mary was censured by Parliament for immodestly pursuing the sport at St. Andrews. Two of the "greats"—Patty Berg and Babe Zaharias—are also shown in newsreel footage of early tournaments. Association-Sterling Films is the distributor.

Health Service Films For Career Motivation

Is a Career in the Health Services for You? is designed to acquaint secondary-school students with occupations in the health services, from medical, housekeeping and equipment maintenance to nursing, administration and food preparation.

The film is the second in a series of 40 Career Counseling Films. The first, *Is a Career as a Technician for you?* was released in the spring. It won a blue ribbon at the American Film Festival as the best vocational-guidance film.

The remaining 38 titles are due to appear on a schedule of roughly one a month. The complete library of 40 titles will cover the World of Work. The distributor, Counselor Films, 1422 Chestnut Street, Philadelphia, Pa., said it will enable young people to make an informed choice while still in school from among all the suitable careers and to plan the education or training they will need.

Both *Technicians* and *Health Services* were produced for Counselor Films by Ralph Lopatin Productions, Inc., Philadelphia. They were written by Gene Starbecker and directed by Michael Levanios, Jr.

Teenagers Doing Their Own Thing For Profit

Junior Achievement, which encourages young people to put their own ideas into action for profit, will have a new audio-visual kit for TV stations this fall, including 60- and 30-second color spots, and a set of color slides with 30-, 20-, and 10-second scripts for live presentation by local announcers. The A-V kit, produced by Cinemakers, Inc., New York, features three teenagers learning to thrive in the free enterprise system.

TACT for American Airlines Stewardesses

American Airlines is instituting a new audio-visual employee training program based on a course in psychological techniques called TACT. Transactional Analysis in Customer Treatment.

American Airlines Stewardesses rehearse script for TACT audio cassette training program at Recorded Publications Laboratories in Camden, N.J.

The program is aimed at helping Flight Attendants, Flight Service Directors, and Flight Service Management to better understand the customers and themselves. It shows how various ego states come into play in everyday life and how the states can be identified for a better understanding between management, employee and customer.

New Films of Special Interest to Management

Pride of Craftsmanship is a 29-minute film dramatically pointing up the satisfaction and self respect a man gets from doing an honest job well. Available for rent or sale from Dafilms, 2625 Temple St., Los Angeles, Calif. 90026.

Anatomy of Inflation describes the causes, kinds and results of inflation and how it affects the daily life-style of the American citizen. This 23-minute film is available from New Graw-Hill Films, 330 West 42nd St., New York 10036.

The Behavior Game shows the contagious nature of good and bad behavior, giving examples of good and bad behavior on the job, whether dealing with the public, or with fellow employees. Originally produced by Barclays Bank, London, it is now available from International Film Bureau, 322 S. Michigan Avenue, Chicago, Ill. 60604.

We're proud of our first name

In our business, we have to be for precision is what it is all about. It all started for us in 1934 and we have been processing film for the leaders of our industry ever since. Our new processing plant offers the finest quality production facilities on the East Coast and has greatly expanded our capabilities.

If you're looking for that extra "precision" in the finished product, we're the people to see.

Special Section Business Screen Magazine

September-October 1971

CONFERENCE FIRMS UP

As we go to press, the National Conference is well underway to becoming one of the most meaningful and rewarding seminars-in-depth in IFPA's history. The theme this year is "New Dimensions in Communication" and as we are in the decade of the Information Explosion, the title seems well applied. Many speakers have been confirmed and a complete program will be available by mid-September. Here's the program outline, indicating activity and topics scheduled.

12th ANNUAL CONFERENCE AND TRADE SHOW
INFORMATION FILM PRODUCERS OF AMERICA
OCTOBER 14-15-16, 1971

— PROGRAM —

THURSDAY, Oct. 14

new products review

FEATURING NEW EQUIPMENT AND SERVICES

Slide Synchronizers

POLACONT INC. is distributing exclusively the Intermedia K-3 Sound Slide Synchronizer and Dissolve Unit. Compatible with all Carousel projectors. 3½ lb. aluminum case. Permits 3 advance systems: manual, time-interval and synch. 9725 Conklin Rd. Blue Ash, Ohio 45242.

16mm Projectors

ARRIFLEX CORP. has introduced the Sonorex Double/16 Interlock Sound Projector, which is a new second-generation to the well-known Siemens 16/16. In addition to the same basic features as its predecessor, the Sonorex has 16 different mix-record-transfer-rerecord-play

back functions, as well as synchronous motor, solid state plug-in circuit boards, elapsed time meter and other improvements. Price is \$3575. Box 1050, Woodside, N.Y. 11377.

Sound Equipment

SHURE BROTHERS has announced a new portable sound system for a wide variety of auditorium uses. The Shure VA300 is said to be feedback-free. Has multi-effect 6-channel capacity control console. "Penetrating" power said to reach last row without blasting front row. 222 Hartrey Ave., Evanston, Ill. 60204.

Storage Equipment

JACK C. COFFEY CO. has introduced a mobile Filmstrip/Cassette Audio Visual Center to its No. 25 series. Self-contained, with storage space for equipment, 54 filmstrips and matching cassettes. 4" ball-bearing swivel casters for mobility; two lock for stability. 104 Lake View Ave., Waukegan, Ill. 60085.

Transparency Viewer

RICHARD MANUFACTURING CO. has two new transparency illuminators. Model 010 has 10" by 10" view surface, \$27.95. Model R-1620 with 16" by 20" surface. Hangs on wall, stands or lies flat on desk. Even color-balanced heatless light. 904 Noble Ave., Van Nuys, Calif. 91404.

Lab Equipment

TREISE ENGINEERING offers a new complete line of film rollers for lab processors in all common film sizes. Ball-bearing design. Durable plastic construction. 1941 First St., San Fernando, Calif. 91340.

CONSOLIDATED FILM INDUSTRIES has placed into operation what is said to be the first fully automated, liquid gate optical blow-up printer with the capability of printing onto Eastman 5271 stock. The operator need only thread up the original and raw stock, put the control tape into the computer, and flip a switch. A fully balanced, high quality internegative on extremely fine grain stock is said to be the result. 959 Seward St., Hollywood, Calif. 90038.

Projection Lens

BUHL OPTICAL CO. has a new wide angle rear projection internal mirror lens system for Carousel that works with prime lenses to cut focal lengths in half. 1009 Beech Ave., Pittsburgh, Pa. 15233.

Camera Accessories

CINE 60 is offering a series of four Angenieux Zoom Motors to fit the 9-95mm, 12-120mm, 12-240mm and 25-250mm lenses. Design is said to remove all sources of vibration from lens barrel. Palm-sized variable speed controls. Prices range from \$325 to \$435.

Also introduced is a new Vacu-Platform, which is a suction-mounted camera platform for use on smooth, flat surfaces. Fastens quickly to car tops, floors, with out marring. 630 Ninth Ave., New York, N.Y. 10036.

Programmers

COLUMBIA SCIENTIFIC INDUSTRIES has introduced the Media Master 1200, a new multi-media programmer which, with expander units, has capacity

for controlling up to 10 slide or filmstrip projectors. Possible functions include lap dissolve, flash and animate, fade, etc. Also, on-off for movie projector. 3625 Bluemont Blvd., Austin, Tex. 78702.

Sound Filmstrip Projector

DUKANE CORPORATION's portable and automatic cartridge film projector with cassette sound, the Commander,

either battery or line-power operation. Standard 35mm single frame filmstrip, standard 50Hz advance system. Snap-loading. St. Charles, Ill. 60174.

16mm Camera

PAILLARD, INC. has announced the H-16 FRM Bolex 16mm camera. It's electrically driven with 100 or 400 capacity for silent or sync sound film.

A sync pulse generator is built into a lightweight accessory that can be carried in a pocket. Or a crystal control is available as a pocket-sized accessory. 12 v. battery is built into handgrip. Price is \$1200. 1900 Lower Road, Lincolnton, N.J. 07036.

Video Tape

AUDIO MAGNETICS CORP. has introduced HP-100 half-inch videotape coated with Tru-Balance Microkote-Na new development in magnetic particle dispersion said to produce brighter color definition. Dual lubrication system: external to reduce static friction, and internal for extended performance life. 1 and 30-minutes lengths. 14600 South Broadway, Gardena, Calif. 90248.

Music Services

THOMAS J. VALENTINO, INC. has added three new production music albums to its library. Total is now over 75 hours of music for audio-visual work. Catalog from 150 W. 46th St., New York 10036.

Sound Slide Projector

POWER FOLDING FURNITURE has introduced a new, self-contained rear-projection sound-slide projector, the Coxco

Sound Slide. Uses 35mm slides, standard audio cassettes, slide load in tray. 1735 360 Lexington Ave., New York, N.Y. 10017.

Lighting Equipment

HERKEY COLORTRAN's Mini-Pan 20 is a new lighting fixture for high intensity flood lighting applications. Said to be ideal for one-light news setups. Price is \$78. 1015 Chestnut St., Burbank, Calif. 91502.

Super 8 Projector

NO VIDEOTRONIC PROJECTOR CORP. has introduced a console model Super 8 sound projector for point-of-sale and educational purposes. Adjustable tilt with 14-degree tilt possible. Teak and construction. 12 3/4" by 16 1/4" screen, with smaller sizes also available. 1 minute capacity. Uses standard MPO cartridge. 222 E. 44th St., New York, N.Y. 10017.

TECHNICOLOR, INC. has introduced a portable Model 1400 sound Super 8

Projector with stop-motion control. Both screen and front projection can be used. Stop-motion causes no dimming of the image. Commercial & Educational Division, 299 Kalmus Dr., Costa Mesa, Calif. 92627.

Video Monitor

SC ELECTRONICS, INC.'s 10-inch monochrome monitor at \$189 is the lowest priced American-made monitor of comparable size. 640-line horizontal resolution. Rack mounts in standard 19" racks. 530 Fifth Ave., N.W. St. Paul, Minn. 55112.

Overhead Projector

TN VISUAL INDUSTRIES, INC. now has a new model Carri-Vue Mark II overhead projector designed for large group training. Portable, folds into its own body case. Fits under airplane seat. Luggage type case. 24 lbs. 25 W. 45th St., New York, N.Y. 10036.

Film Treatment

INTERNATIONAL FILMTREAT is of-

fering an attractive Film Damage Wall-chart listing causes and ways to prevent most types of film damage. It's designed to stick to the wall in film inspection areas. 733 Third Ave. New York, N.Y. 10017.

Sound Recorder

ARRIFLEX COMPANY is marketing a new tape recorder for motion pictures, the Arrivox-Tandberg, designed to work in sync with Arriflex or other motion picture cameras equipped with pilotone generators. Features include straight-line threading, built-in pre-amps, power supplies for dynamic and condenser mikes, and start-mark oscillator. 25-20 Brooklyn-Queens Expressway West, Woodside, N.Y. 11377.

The VTR line... with exclusive PROGRAM COMMAND CENTER™

PVR 707

PVR 708

PVR 709

It's Audiotronics' new PVR line...the first family of EIA-J standard format 1/2-inch Video Tape Recorders to feature the exclusive, revolutionary PROGRAM COMMAND CENTER concept, and the first VTR's versatile enough to handle any job, and engineered to meet any future need.

The exclusive PROGRAM COMMAND CENTER is standard on all the PVR models and puts these important VTR functions at your fingertips: Push button, solenoid-controlled tape transport • Two input video-audio switcher • Stop frame • Audio dubbing • Color-monochrome selection • Slow motion-normal selection.

All VTR's feature automatic tape shut-off, automatic and manual level controls, and complete compatibility with other Type 1 format VTR's.

These key options are available on any model: Time lapse recording, a re-

mote control unit, and a 19-inch rack mount.

BUT HERE IS THE BEST PART...no matter which model you choose, if you decide at a later date you want to add any available feature or option...including color...NO PROBLEM! Capability is built-in so they may be added anytime.

Since the Video Tape Recorder is the HEART of your CCTV system, be sure you see The VTR line...the one with the exclusive PROGRAM COMMAND CENTER and the future built-in—from Audiotronics—naturally!

Write for more information. We will also send the name of your nearest Audiotronics Video Systems Representative.

OXBERRY'S NEW LIQUID GATE

NOW you can pull
out a dry gate....

Available for
ACME &
RESEARCH PRODS.

AND plug in a
liquid gate.

- ✓ TWO SWITCHES
- ✓ TWO REGULATORS

VACUUM & PRESSURE

A self contained, normal loading, unit that's ready to go in minutes. Virtually eliminates scratches and passes splices easily without causing bubbles, liquid spillage, streaks or turbulence, at freeze frame, normal speed and up to 600 f.p.m., with a pin registration system.

The system's liquid is maintained at approx. two pounds pressure by a pump and regulator bypassing all excess pressure back to the reservoir which contains a regulated bubble trap. The vacuum pump maintains approx. five inches of mercury vacuum which returns all fluid to the reservoir. With a constant flow of filtered fluid the film is totally immersed and eliminates scratches and dirt. The two thick optically flat glass windows minimize the effect of dust and dirt on its outer surface, and is specially coated to maximize light passage. The film is held at your normal focus plane for follow focus.

IFPA

continued

New York Chapter Chartered

After months of preparation and high interest from New York film makers, a petitioning group was granted a charter called the New York Metropolitan Chapter. The organizational meeting was held on July 14, 1971 in the Eastman Kodak Conference Room, 1133 Avenue of the Americas. National President of IFPA Bob Montague, was present to install the officers, read the Code of Ethics, discuss the responsibilities and future plans, and reviewed the history of IFPA, its origin and growth.

Chairman Arni Morrison of Lab TV heads the group. Vice Chairman—Programs is Michael Laurence, Chapter Secretary is Paul Blaisdell, Treasurer is Bill McClure. Membership Chairman is Robert Woolman, and Karen Kenny is the Publicity Chairman. Inquiries should be addressed to the Office of the Secretary, IFPA Room 903, 110 William Street, New York 10038 or telephone 233-7650, Ext. 35.

Connecticut Valley Petitions

Film makers in Hartford, Springfield and other cities in the area have petitioned for a Charter to be called "The Connecticut Valley Chapter of IFPA." On July 8, 1971 at the Motion Picture facility of Aetna Insurance Co., the group had its third meeting and presented the petition to visiting president Bob Montague. A statement of goals, objectives, and program plans was read and will be presented to the National Board at the August Meeting. The new Chapter will officially be installed in September by Vice President Arthur Rescher. This will make a total of Twelve Chapters of IFPA, five of which are in the East. Further information may be had by writing the Chapter Chairman, Malcolm Snyder, Audio Visual Department, Aetna Insurance Co., Hartford, Connecticut.

Cindy Awards Finals

By now, local juries have completed their screenings, three top films selected and forwarded with recommendations to the "Blue Ribbon Jury" in Hollywood. Linda Reavely, daughter of Hal Reavely, Cindy Chairman, will organize, administer, and handle all correspondence between now and the exciting "Cindy Awards Banquet",

held as a climax to the 12th Annual Conference and Trade Show of the Information Film Producers of America at the Town and Country Convention Center, October 14, 15, and 16, 1971, in San Diego, California. Lida Reavely, a freelance TV Producer, steps into the activity to relieve of father who recently was hospitalized. We all feel confident that the awards are in good and capable hands.

News from the Chapters

The Summer of 1971 saw a number of interesting programs in the local chapters.

The *San Diego chapter* met at the Marine Corps West Coast Motion Picture Production Unit at Camp Pendleton, California. SSgt Don Shearer, trained under William Tuttle at IFC, gave a demonstration of film making techniques. A tour of the facility maximized the evening.

The *Chicago chapter*, the best chapter in the country, met for the usual steak dinner and a program. Omni-Think, an idea production company to learn how a comprehensive creative service operates. Sample products were shown including the *Precious Tissue*, conceived and written for Fire Escape Ltd. and the American Red Cross.

The *Seattle chapter* met at the local man Kodak facility for a program on sound tracks. Bill Purdy from Alpha Cine discussed common misuses, standings and ways of improving quality. Selected films were also shown. A special feature was a \$25.00 door prize donated by Alpha Cine. It is reported that an after-meeting caucus was held at a nearby lounge. It's not reported whether the winner bought.

The *Boston chapter* met for dinner and a business meeting followed a tour of TR Productions facilities.

How to Advance Your Husband's Career wrestles with the problem of what to do about "liability wives" who are handicapping their husband's careers and hurting company efficiency and progress. A series of two films is available from BNA Films, 55 Fishers Lane, Rockville, Md., 20852.

New Systems Analysis and Design Films

An audio-visual course on *Systems Analysis and Design* treats the entire range of a systems life cycle from its conception when objectives are defined in response to needs, through planning alternatives, analysis to select the best strategy design, implementation and evaluation of effectiveness and efficiency, as well as the identification of new needs which require new objectives and reiteration of the systems life cycle.

Not restricted to computer information systems, the seven films, produced and distributed by Edutronics Systems International, of Los Angeles, are also designed to be useful in other systems development efforts.

A comprehensive workbook and answers guide accompany the films as

supplementary material and provide the student with sources of reference, as well as lesson previews, outlines and self tests.

Psychology Today Series for Business Training

A new series of eight 26-minute motion pictures, billed as the *Woodstock* of educational films, takes the basics of modern psychology and "lays it in the laps of the audience with practical demonstrations as fun to follow as this week's version of *Laugh-In*."

Designed primarily for college psychology classes, the series also has application for business. Subjects covered are *Aspects of Behavior, The Sensory World, Information Processing, Learning Development, Social Psychology, Personality, and Abnormal Behavior*. Producer and distributor is CRM Books, Del Mar, California.

This Way to the Statue

A simple, short three-minute film shows people taking the ferry to Liberty Island to see and climb the Statue of Liberty. It's designed as a curtain-raiser for an industrial sales meeting, or as a three-minute refresher during the course of any business meeting of protracted length.

Saxton Graphic Associates, 350 Lexington Ave., N.Y., produced the film and offers it for rental.

before you buy any color processor, ask yourself these

5 questions:

How long does it take to warm up?

Normally it takes most processors 3 to 4 hours to get from ambient 70° to the required 100-110°. With a Treise Color Processor, warm-up takes only 20-45 minutes. (Think how much valuable time you save!)

Once on temperature, does it stay on temperature?

Treise Processors feature a unique "proportional control" system that maintains a close watch over the temperature and provides just the right amount of heat to maintain it at all times. There is no "stop 'n go," no wide fluctuations of temperature. Thus a Treise Processor is more economical to run than any other processor.

Does it provide consistent quality?

No other processor can assure you such unvaryingly consistent quality and performance — end to end, side to side, roll to roll, day to day! This is the kind of performance you should demand... and can take for granted when you buy from Treise.

Does it "cut corners" to feature a "cut-rate" price?

Treise Processors meet or exceed all film manufacturers' specifications. All chemical solutions are pump recirculated and filtered. All moving parts in the drive system run on ball bearings. All components are the finest that money can buy.

How easy is it to maintain?

When it comes to maintaining a Treise Processor, there's frankly very little of it. When necessary, however, you'll find that it has been designed with service in mind. For example, the film racks are removable without the use of tools and without disturbing thread-up. Moreover, all pumps, filters, etc., can be easily inspected and replaced in a few minutes, instead of the usual 2 to 3 hours delay!

NATURAL IS THE WAY TO GO

WHAT KINDS OF EQUIPMENT are the industrial film makers using these days? How are they using it?

Leo Rosenberg, Rental Manager of New York's Camera Mart, who has had his finger on the pulse of making activity for a number of years and who probably talks to as many film makers as anyone in the business, says that the sponsored film production of today is striving more and more for the natural look.

"It's not only the young men who are shooting this way," Rosenberg says, "but even the veteran producers are looking for the contemporary mood. You are seeing more and more hand-held camera work, more natural lighting, more realistic sound tricks."

"A few years ago, we used to see everything on the screen as the cinematographer would see it—the perfect 3 to 1 contrast ratio, the exact static positioning of the camera. Now, we're still getting very good images, but without what we used to call the 'Hollywood' look. We're showing things more from the viewers' viewpoint."

"The sound tracks, I suppose you could say, are technically poorer—more background noise, not as perfect acoustics as we used to have, but once again, our audiences are used to it, they identify with it. It sounds real to them."

"We have found that even though a great many sponsored documentaries are made without sync sound, the tendency is to shoot with silent cameras anyway. The Eclair NPRs, the Arriflex BLs and the Auricons don't disrupt things on location as much as a noisy camera. This can be important in many situations."

"One of the big changes in equipment in the past year is the increasing use of crystal control for wireless sync. It is now completely reliable and although still fairly expensive, the advantages are so many that producers find it very worthwhile."

Stop borrowing the Bolex

Bolex H 16 Rex-5 Camera

Bolex H 16 Rex-5

Bolex H 16 Rex-5

Today's the day you wanted to use the Bolex. "Sorry. The Bolex is being used to make a time lapse study and is going to be tied up for awhile."

You'll have to hold off on that public relations film. And that microscope sequence for the research film will have to wait. And all those other film projects will have to be re-scheduled.

Maybe what your company needs are a few more Bolexes.

Then the Bolex would be at your disposal, instead of the other way around.

For a free 32-page catalog, Industrial Bulletin and list of Bolex dealers near you, write to the Bolex Company.

ANNUAL
PRODUCTION
REVIEW

A HARDCOURT BRACE JOVANOVIĆ PUBLICATION

We operate 30 of the busiest loan offices in America.

Just check the records. Last year we made over a million loans all over the country.

In fact, the way these men, women, and children borrow from us every year, you'd think our loans were free.

And you'd be right.

Because Modern specializes in loaning films. Business sponsored films. And we do more of it than anybody else in the world.

Our success didn't happen by accident. We know that the easier we make it for people to see your film, the more people are going to see it. So we operate the largest number of film libraries. Thirty of them in key urban areas that are within easy access of 80 million people.

What does this do for your film? It helps it

circulate faster to business and community organizations, schools, women's groups, resorts, airports — whichever audiences you want to reach with your message. Result: you get

much more exposure for your dollar.

Want to know more? Call one of our friendly sales offices. Their advice won't cost you a penny.

You do everything you can to make a film right.

Hugh Zielske sells appliances. He has a hot new one for the kitchen. You made a film for in-store demonstration. But Hugh won't use the film without a fool-proof projection system. Like the Technicolor 610. It features no thread/no wind continuous loop cartridges. Hugh inserts one; turns a switch; and does his own voice-over while the film shows itself. Most important, he gets utter simplicity. Complete reliability. He can leave the film playing and tend to other customers. He can even let customers play it themselves.

Charlie Bungert has to learn to fry burgers for a franchise operation. Your sound and color film can teach him how. If he has the Technicolor 1000 Projector to go with it. Charlie couldn't run a conventional projector. And he wouldn't take the time. But anybody can run the 1000. Charlie simply inserts the cartridge. And plays your film. Until he becomes a burger master.

Now make sure it's shown.

Norm Brown has a film that demonstrates heavy construction equipment. It brings giant earth movers and rock crushers right into a prospect's office. Norm uses the film. Because his Technicolor 1300 Projector makes it easy. He wouldn't drag around conventional reel-to-reel equipment. Or keep a customer waiting while he sets it up. But this one, he wouldn't be without.

Irene Hook is an assembly line worker. You made a three-minute silent film that shows her how to insert flange A1 around amplex B and into groove C without breaking the XYZ circuit. If Irene has the Technicolor 820 Projector, all she has to do is insert cartridge A into Slot B and push button C. Irene can do it herself, right on the production line.

.....
 We think any business or instructional film is better off in a Technicolor cartridge. Let us send you a brochure with all the details.

The Sony VideoRover II... small, but oh my!

Today, almost everybody knows it's not your size that determines what you are . . . it's what you're made of. And that's what the VideoRover II is all about. It's the compact . . . portable video camera and recorder that lets you shoot television pictures just about anywhere.

For those of you who aren't acquainted with the VideoRover II . . . here are some of the things people who already own one are using it for.

Business

Shooting and playing back sales presentations for constructive critiques.

Industry

Recording plant procedures for review

toward technical improvements.

Education

To show students correct laboratory and classroom techniques. Documenting field trips for later study.

Military

For "live" news recordings over military television networks. For instant training applications.

The Sony VideoRover II is *more* than meets the eye. With its built-in features and standard accessories . . . plus the optional equipment available to you . . . we think you'll agree it's *the* mighty mite of the VTR industry . . . as well as your industry, too . . . no matter what your industry is.

Firefighting

Training and exercise reviews based on actual field or simulated conditions to sharpen firemen's firefighting procedures.

Law Enforcement

For instant, "live" records of traffic conditions, testing suspected drunk drivers, documenting actual field situations. Crimelifighting.

Sports

As coaching aids so the players can review themselves instantly.

Insurance

For documenting damages on location such as fire, flood, etc.

Get the picture? Good! Because now we're going to explain the VideoRover II to you . . . in detail.

Meet the Sony VideoRover II.

It's compact . . . portable . . . 1/2-inch black & white VTR system consisting of the AV-3400 Videocorder® record/playback unit and the AVC-3400 Video Camera.

Here's what it does as a system.

With the VideoRover II, you can get on-the-spot television recordings of almost any application you desire . . . under practically any lighting condition you're confronted with. After you finish shooting, you simply rewind what you took . . . raise the camera's eyepiece and flip the switch to "forward".

Instantly, the viewing screen becomes a mini-TV set . . . and you see exactly what you shot. With the Sony VideoRover II, you're literally a scaled-down television studio . . . ready to shoot pictures . . . with sound . . . and see what you shot. Instantly! Now, let's take a closer look at this great system.

Features of the

AV-3400 Videocorder.

It's a lightweight (18 lbs.)... compact record/playback unit. Just the thing for a variety of applications such as teaching, training, promotion, scientific, medical, law enforcement, fire-fighting, insurance work, military use, coaching, entertainment, business and industrial... just to name a few!

Automatic-adjusting audio & video recording levels... assure you perfect recordings—with little effort—each and every time. Automatic Shut-off... turns the recorder off when the tape runs out.

Uninterrupted, rechargeable battery... operates up to 45 minutes of continuous operation.

Operates off household current... using the AC power adapter, supplied with the unit.

Stop action... lets you "hold" a picture for detailed examination...

Manual tracking control... corrects minor tracking errors during playback.

Sound dubbing... allows you to add music or commentary to your pre-recorded picture during playback.

Time counter... gives you minute-by-minute recording time, as well as indicating the amount of tape as a conventional tape counter.

AV-3400 Accessories.

With the AV-3400 Videocorder, you get an AC power adapter, battery pack, 1/2-inch video tape, take-up reel, earphone, monitor connecting cable, polishing cloth, splicing cleaning fluid, head cleaner and shoulder bag. At no additional charge!

Note: All optional equipment shown is identified with *.

Shoulder Bag

Sony V-30H Video Tape

* LC-3400 Carrying Case

* BP-30 Battery Pack

* RJ-53W RFU-54W & Video RF Adapter

* DCC-2400 Car Battery Cord

Features of the

AVC-3400 Video Camera.

Once you use this camera... you may never want to use movie film again! Just connect it to the AV-3400 Videocorder and you're ready to shoot... anything... anywhere. It's truly a miniaturized version of a studio television camera. And it performs like one!

Sensitive... shoots needle-sharp pictures under a variety of lighting conditions. And weighs only 5 pounds. Rugged... take it into a factory... classroom... plant... you name it. This camera delivers!

Zoom Lens... f/1.8... covers wide angle, regular and telephoto applications for pictures that play back with clarity and quality.

Built-in electret condenser microphone... picks up sounds that will amaze you.

Viewfinder/TV Screen... Shoot through the viewfinder. Rewind. Flip up the eyepiece. Playback. The viewfinder becomes a small TV screen so you can see what you took. In detail. Instantly.

Convenient Trigger Grip... squeeze it once and you're recording. Squeeze again and you stop.

AVC-3400 Accessories.

The Video Camera comes with zoom lens, camera grip, shoulder strap and polishing cloth. No charge!

Summing it all up...

...when you put the AV-3400 and the AVC-3400 together, you've got a 1-2 combination of quality.

The Sony VideoRover II.

...small, but oh my!

REPORTS ON CURRENT EVENTS AND TRENDS

FCC OK's Motorola EVR

The Federal Communications Commission has granted Motorola Systems, Inc. a waiver to resume shipment of the Motorola EVR Teleplayer units. After extensive testing, the commission stated that the Motorola unit meets technical radiance interference standards proposed by the FCC.

Lloyd Singer, vice president of Motorola, termed the FCC action "the last hurdle that needed to be cleared before full-scale marketing."

Motorola had initiated the dialogue with the FCC. "We have been working closely with the FCC for more than a year," Singer said, "and while suffering some delay in marketing as a result of being the first cassette TV manufacturer to formally request the FCC to establish parameters for cassette TV, we feel that we have helped blaze the trail for the entire industry. The FCC has been most cooperative in their assessment of this totally new product."

Lab X's Out "X" Films

Skin flicks are out at Hollywood Valley Film Lab. The lab, which began handling "girlie" films about 20 years ago (which were quite tame by today's standards), announced recently that the new stuff was so bad that it "could not continue processing such material and feel any sense of dignity."

The ban will result in an immediate one-third reduction in business volume. However, the firm expects to make up the loss through expanded volume in other areas such as educational and industrial films.

New Assistants Join Directors Guild

The Directors Guild of America-Producers Training Program has graduated the first group of trainees into the Guild as motion picture film 2nd Assistant Directors. Harold Klein, Administrative Trustee, reports that nine applicants have completed a two year job training and seminar program.

The program came about as a result of a collective bargaining agreement negotiated three years ago between the Film Producers Association of New York and the Directors Guild of America. Applicants to the program are subject to written and oral testing by the Princeton Associates for Human Resources, which determines the applicants qualified for training. Suc-

cessful trainees are placed with television commercial, feature film, industrial film and documentary production companies who pay them a weekly wage from \$125 to \$175. At the conclusion of the program, the trainees are automatically accepted into the D.G.A. as 2nd Assistant Directors. In addition to the nine who have graduated, there are eleven trainees currently training in the program.

Ross Steps Aside as American TV Festivals Director

Wallace A. Ross, President of The American TV Commercials Festival, Inc., has granted rights to operate the 1972 Clio Award competitions for Radio, Television, and Print advertising to William N. Evans, until recently Executive Vice President of the festival corporation. Evans will conduct the awards competitions as in the past twelve years. However, it will be independent of any participation by the festival's founder.

WALLACE A. ROSS

The transfer of management fulfills Ross' intention of "stepping aside" as director of competitions, as announced by him in the awards journal that was distributed at the last festival on June 7th at Philharmonic Hall, New York. A valedictory statement in the journal challenged the advertising industry "to stop shillyshallying around and get together in the sponsorship of one meaningful annual awards system."

During the coming year, under the auspices of his International TV Com-

mercials Study Foundation and in conjunction with several of the organized advertising trade associations, Ross plans to concentrate on the educational roll that has been more and more a part of his personal activity during the past few years—speaking to advertising, civic, college and school groups, completing a third volume of "Best TV & Radio Commercials", and organizing seminars and workshops, with three specific workshops already planned for South America, Europe and the Far East. A column on TV commercials in one of the major consumer magazines and active participation in the advertising agency business are also under discussion at this time.

Getting Ready for Mao and Chou

The East Is Red, national anthem of the Red Chinese, is among the complete collection of national anthems now available from Thomas J. Valentino, Inc.

The new anthem collection and two additional hours of more contemporary material will be part of the growing library of music for films (75 hours now catalogued) at Valentino's expanded offices at 151 West 46th Street, New York.

EVS Color Center Discontinues Operations

Electrographic Corporation has discontinued the operation of its EVS Color Center at 62nd Street, New York.

According to William Fermin, President, the lab would have required a substantial investment in wet lab equipment to bring it up to competitive standards.

Electrographic now intends to continue its expansion in the videotape finishing and distribution area.

Instavideo Pro-Production Engineering Delays

Ampex Corporation has deferred production on its Instavideo cartridge video recording system by several months. In addition, the company is assessing FCC regulations regarding radiation interference.

Richard J. Elkus, Jr., general manager of the Ampex educational and industrial products division, said the company now expects first production deliveries in the spring of 1972

AURICON "SUPER-1200"...

and know the great
difference in working with
a truly Professional Camera.

... FOR JEWEL-LIKE PRECISION IN FILMING ROCK-STEADY MOTION PICTURES!

The Auricon "Super-1200" like all Auricon 16mm Professional Cameras is a superb picture taking instrument. Every precision-engineered part of this finest of all 16mm Cameras is carefully built and assembled with the rare watch-maker skill of old-world craftsmanship, combined with modern, space-age know-how in optics and electronics. The Auricon "Super-1200" actually contains jewels in the Camera-Gate! This polished Sapphire Film-Gate is guaranteed frictionless and wear-proof for in-focus and scratch-free pictures, regardless of how much film you run through the Camera! Among the many professional features of the "Super-1200" is Reflex Ground-Glass Focusing through the Camera lens. All this, and high-fidelity, optical or magnetic, single-system or double-system sound-recording capabilities which are unmatched by any other camera in the world! Write for free, illustrated Auricon Catalog fully describing this rare jewel of fine craftsmanship.

for the U.S. market, with international deliveries later in the year. The company previously indicated U.S. deliveries would start late in 1971.

Engineering work is underway to make several minor improvements in the product as well as to insure that the Instavideo system complies with current interpretations of FCC radiation specifications designed to prevent possible interference with the picture reception of neighboring television sets.

Elkus said firm prices for the Instavideo line will be announced later this year.

New Manpower Development Organization in Detroit

A new management and manpower development organization, the Bill Sandy Company, has been formed in Detroit.

President of the company is Bill Sandy, former vice president of the Jam Handy Organization, who has said that the new company "will place emphasis on emerging and innovative technologies, from computer assisted instruction to closed circuit television."

Jayark Opens New Plant on Long Island

Jayark Instruments Corp., manufacturers of self-contained portable Super 8 projectors, has acquired a new 30,000 square-foot facility at Brentwood, New York, and expects to quadruple

production by mid-fall. The company has already optioned a second building of similar size in the immediate area.

New York Cameramen Freeze Wages Before Freeze

Cameramen of Local 644, the Motion Picture Photographers Union in New York, have voluntarily put a two-year freeze on their wages in an all-out effort to encourage more commercial production. Cameramen voted the moratorium on wages during a membership meeting on July 7, some weeks before President Nixon placed the lid on price and wage hikes.

"Once again Local 644 is leading the way," said Harvey Jenkins, business representative of the Local. "We read the signs and we knew what had to be done, so we did it," he added.

Harold Posner, president of Local 644, said that rounds of wage hikes tend to be self-defeating for the majority of professional cameramen by drying up jobs. "Our members," he said, "opted for higher pensions and welfare benefits which more independent producers can live with."

Additional provisions of the contract include straight time for traveling on Saturdays and a common meal period with the rest of the industry's craft unions.

Super 8 Film Videoplayer Demonstrated

A feasibility model of a cartridge-loading super 8 film videoplayer that could be used in schools, industry,

government and the home, to play color and sound super 8 motion pictures over a standard television receiver, was demonstrated at the convention of the Society of Motion Picture and Television Engineers in Montreal, October 8.

The demonstration, which Kodak emphasized was not a new product announcement, was made by Eric Yavitz, sales administrator for Kodak's Motion Picture and Education Markets Division, who outlined several specific advantages of film over other software, stressing the limitations of other software systems entirely dependent upon a television receiver for playback.

Pointing out several of the more well-known advantages in any television playback device—such as enabling the user to program without setting up projection equipment and darkening the room, being able to feed one or a number of television sets from remote locations, etc.—Yavitz went on to point out several similarly inherent disadvantages of a system entirely dependent upon a television set for playback. Included were the high price of the cassette player and color television set, the limited size of the TV screen, the difficulty and expense in distribution overseas due to differing television standards, and the obvious inability to program material without a television set.

Identifying the pros and cons of a

system that permits only television playback, Yavitz pinpointed the need for a more flexible system permitting more freedom for the professional communicator in business, industry, education, and government.

"Super 8 sound film systems can give the user this sort of flexibility," said Yavitz.

Joseph L. Boon, Technical Assistant to the General Manager of Kodak's Apparatus Division, outlined some of the key concepts in the design of the feasibility model of a super 8 film videoplayer built by Kodak and demonstrated at the convention.

The compact, noiseless unit, measuring 8 inches in height, 26 inches wide, and 24 inches in depth, weighs 35 pounds, runs on standard 60-cycle, 110-volt current, and its output is two wiring clips for attachment to the TV receiver.

The feasibility model lends itself readily to modification for use in countries utilizing other electrical (50-cycle) and television scanning systems.

Kodak officials emphasized that the videoplayer demonstrated at the convention was merely a feasibility model—built to study the concept of a cartridge, super 8 television playback device—and that no commitment to manufacture or market such a unit has been made by Kodak.

Thermal Tape Duplication

The Du Pont Company has been granted a U.S. patent on its thermal technology for duplication on chromium dioxide magnetic tape. The company said that patents covering the same technology have previously been granted by most West European countries and are pending in some others, as well as in Canada and Japan.

The process covered by these patents is known as thermoremanent duplication. It is based on the particular magnetic qualities of chromium dioxide, the proprietary material of Du Pont's "Crolyn" magnetic tape. Du Pont has demonstrated that the process can duplicate videotape at least 10 to 15 times faster than present electronic methods without loss of quality. Production equipment using the Du Pont process has been under development by several companies since Du Pont's announcement of the new technology in June, 1970.

Application of this technology should play an important role in the growth of the large consumer market predicted for pre-recorded video cassettes, according to Donald C. Nolte, marketing manager for "Crolyn" magnetic tape. This market potential, Mr. Nolte said, has been hampered by lack of a high speed economical duplicating process.

RENTALS • SALES • SERVICE

Now... Capital Film offers two Full Service Laboratories...

• in Washington, D.C. • in Miami, Florida

In May of this year, Capital Film completed expansion of its Miami lab into a full service facility with editorial, sound and processing capabilities.

Also, because of a growing demand from regional customers, the Miami facility has created a special slide film and film strip department.

Here's what a Capital Film customer NOW receives...besides the recognized quality and renowned customer service:

FROM MIAMI:

1. Full 35 and 16mm color positive printing and processing services as well as black and white.
2. Full 16mm color reversal printing and processing services including 7389 sound track prints.
3. Slide film and film strip department.
4. Optical printing department for blowup or reduction with new wet-gate.
5. Complete editorial and sound transfer facilities under one roof.
6. Color control with new Eastman Color Analyzer.

FROM WASHINGTON:

1. Full 35 and 16mm color positive printing and processing services as well as black and white.
2. Full 16mm color reversal printing and processing services including 7389 sound track prints.
3. Full Super 8mm color printing and processing services.
4. Super 8mm cartridge and cassette loading and repair.
5. Complete editorial and sound dubbing, re-recording, and transfer services — RCA WESTEREX.
6. Optical printing department with wet-gate.
7. Color control with Hazeltine color analyzer.

It's a CAPITAL IDEA to give you full service — night or day.

For further information, fill in the coupon below for our NEW Corporate Information File, including price lists and reservation for 1972 desk calendar:

A/V MANUFACTURER SHEDS SOME LIGHT ON INADEQUATE ILLUMINATION PROBLEMS

A recent survey of audio/visual equipment indicates that one of the least understood problems faced is that of inadequate illumination, according to Jim Hulfish, director of marketing, Spindler & Sauppe, a major manufacturer of audio/visual equipment.

"Inevitably when a/v manufacturers receive complaints about inadequate illumination, the culprit turns out to be reduced line voltage, rather than any fault with the projectors or the lamps," Hulfish said.

"Our Selectroslide projectors, for instance, take 1200 watt lamps rated by the lamp manufacturers to operate at 120 volts.

"What many a/v operators don't understand is that it only takes a slight drop in voltage to cause a drastic reduction in illumination," Hulfish said.

For example a 15 percent voltage drop reduced light output by almost 50 percent. Other ratios are: five voltage drop equals a reduction in light output of 14 percent; 10 voltage drop equals 26 percent; 15 percent voltage drop equals 37 percent; and 20 percent voltage drop equals 50 percent reduction.

Hulfish suggests that the best way to solve this ever-present problem is to always carry a pocket-size voltmeter and a good quality extension cord.

"Cheap extension cords are a constant cause of voltage reduction. After you hook up the heavy duty extension cord, always check the voltage output at the cord, not the electrical source itself," Hulfish explains.

"If the available outlet is not putting out 120 volts, boost the voltage with a variable output transformer. Any variable transformer, rated at 10 amps or more, with 120 V input and output voltages ranging from zero to 140 volts, will give up to 20 additional volts."

Hulfish noted that there is another cause for inadequate illumination problems that voltmeters and quality extension cords can't help.

"Frequently, operators of both slide and motion picture projectors will try to stretch the capability of the equipment by attempting over-sized images. The only way to solve this problem is through continued education on the part of the manufacturers."

Changing the ACL's clip-on magazine takes 5 seconds!

*Loading the magazine is fast and simple, too.
Less changing bag time than any other camera.*

To change the ACL's rear-mounted co-axial magazine, you snap off the used one and snap on a fresh one. That's all. No threading, no loop to form. You don't need to touch the film at all!

The film is threaded and the loop is formed *inside* the magazine when you load it. Before shooting starts. The rear film pressure-plate is on the front of the magazine. The film channel and the aperture are on the camera body.

To load the magazine, you pop the spool or core into

place, push the film's end into a light trap and snap the feed side lid on. That's all you have to do in the dark! No threading, no sprockets.

On the take-up side, you run the film through two sprockets and form the loop. You can see what you're doing, so it's simple—and *fast*. Film maker Vaughn Obern says: "With one assistant, you can easily get by with only two 200 foot magazines."

Shooting unscripted action that won't wait, you can leave the tape recorder going

when you run out of film, and cover the lost five seconds with a cutaway, later. And in the studio with a script, the ACL's five-second magazine change means that it's just another take. Immediately.

For a free ACL brochure, write to Eclair Corp. at 7262 Melrose Ave., Los Angeles, Calif. 90046; or at 73 S. Central Ave., Valley Stream, New York 11580. No obligation.

eclair

CAMERA MAKERS SINCE 1909

paradox

BY STANFORD SOBEL

PARADOX: The very same people who want a writer to do good work, keep chipping away at his identity so that he cannot do good work.

RECENTLY I APPEARED on a panel of filmmakers to discuss the state of the art, the role of the writer, the changing facets of film, and all the other currently popular subjects for forums on film. Well, one of the other people on the panel, also a writer, showed a film I had written which he claimed was *his* film. He was able to pull off this petty larceny because the producer of the film had refused to allow any professional credits on the picture, and therefore nobody in the audience knew who the scriptwriter really was, least of all, the other writer on the panel.

Now, I ask you . . . what would *you* have done in this situation? Would you have jumped up and yelled "You *Cheater* you!" Would you have denounced the fraud to the entire audience? Would you have been cool and charming about the whole thing and casually dropped a debonair sarcasm to the audience? What *would* you have done?

I was able to collect myself quickly because this is the fourth or fifth time this kind of thing has happened to me in the sponsored film field. It cannot happen in television, theatrical shorts, or features, because the screen writer in these fields is protected by the Writers Guild of America contract. The writer must have a credit title immediately following the director's, and of the same size type, screen, etc. But no such protection exists in the sponsored film field, so these kinds of frauds keep happening. If there were

a writer credit on the picture, nobody else could claim to have written the picture, or at least not very convincingly. Yet, many producers refuse to put a writer's credit into the picture, for what they consider good reasons of their own.

Their reasons are all variations on a single theme . . . only the producer's firm should be recognized in the titles. Credit titles are just free publicity for the various individual craftsmen who worked on the picture. These people may be working elsewhere in the future, they may try to pirate the client, or they may claim more credit than they deserve.

But the basic reason is none of these. The basic reason is tied up with something called . . . "The Identity Crisis." Producers, and some clients too, feel so insecure about their position, their status, and their contribution to the film that they are constantly in jeopardy, afraid of others in the industry, afraid of the consequences of their taking a strong position on almost any issue of creativity.

Well, Friends, writers have an identity too, and it affects everybody in the film industry. This industry depends upon good films. It's almost impossible to write good pictures unless you have a very strong sense of identity about your writing style, your individuality, your creative drives, and your uniqueness. The producer can help to chip away at this strong sense of identity by constantly putting the writer down, but the most devastating put-down of all is to refuse him a credit title.

And, it's also a personal rip-off of the worst kind because you're interfering with his ability to make a living.

Most of the new clients I have acquired in the last five years have been producers who saw a film I had written for a competitor, noticed my name on the credit title, and then called me up about a film he had in mind himself. If no producer allowed me to have a credit title I am certain I would never get enough new clients

to continue earning a good living.

Some producers maintain that nobody ever notices the credits except the other people in our business. To which I can only say "Horse-feathers!" Even if that *were* true, it's very important exposure in these days of small staffs and no staff writers. But it's not true. Industry people may notice professional credits *more* than other people, but even unsophisticated audiences now look closely at credit titles to see if they recognize any familiar names. But perhaps the strongest reason I can mention is the kind of consequences involved in the incident I mentioned. If my name had been on the picture, the other writer would never have shown the picture and claimed it as his own, especially with me on the same panel!

The consequences of not using credit titles are bad for everybody, including, in many cases, the producer himself. I've had *clients* show me pictures I had written for other divisions of their own companies as examples of the kind of scriptwriting they wanted! And not long ago I sat in with a client who was interviewing prospective producers when one of the salesmen making a presentation showed a picture I had written as his company's sample. The prospective client knew I had written the film and it made the producer look like a finagle artist. If my name had been on the picture, it would have made him look like a clever salesman.

Bill Bernal, an old friend and one of my most respected writing colleagues in the industry, mentioned to me that this magazine, *BUSINESS SCREEN*, often fails to identify the writer of a film in its reviews. But I discovered on investigation that the writer is *always* identified in these reviews if he has a screen credit, or if the producer includes the information in his publicity about the film. It turns out that when the writer of a film is not mentioned, it is only because the producer conceals his identity. Again . . . the attack on the writer's creative identity . . . by the producer but not by this

continued on page 107

Stanford Sobel's credit titles have appeared on theatrical, television, and sponsored films. A free-lance writer based in New York City, he also writes "Paradox", a column which appears in each issue of this magazine.

Ecology Lady

The typical neighborhood recycling center has great problems: its operation depends on volunteer labor, its funding is uncertain, finding nearby markets for recycled materials, often safety precautions are disregarded, bi-metal cans need special processing, metal rings must be removed from glass bottles, glass containers must be separated by color, steel cans are often mixed with the more readily recyclable aluminum cans.

Our Ecology Lady, Mary Karraker, who runs the Tysons Corner, Virginia, Recycling Center, tells how to do it in her own words.

21 minutes — 16mm color
Purchase price — \$150

Recycling

The pressure of public opinion in favor of recycling is enormous. Nevertheless,

- recycling of ferrous metals in municipal wastes is not practiced except in unusual cases,
- recycling of waste paper is declining compared to total paper use,
- recycling of aluminum has not yet been tied to a municipal solid waste system,
- recycling of glass is in its infancy,
- recycling of plastic has not yet been technically developed

"Recycling" shows existing techniques for recovering materials from solid waste and newly developed equipment and systems which may make recycling universal tomorrow.

21 minutes — 16mm color
Purchase price — \$200

The Realities of Recycling

This longer film contains the additional substance about the problems and potentials of recycling that a serious student, public works administrator, or community official wants. Existing markets for glass, aluminum, steel cans, paper, and old car hulks are described along with new technology for tomorrow.

38 minutes — 16mm color
Purchase price — \$300

Recycling

A promise for the future is what we deny. Grave
 but package terms we've a right
 From cradle to the grave.

So give us now a package new that holds the product well.
 But after it has served that use it blows itself to hell. • •
 Anonymous, an company executive. **Ecology Lady**

Recycling

The recycling operation is reclaiming two million cans
 a month. Collections from all aluminum companies
 nationwide will soon bring the total to nearly 200

million a year. But with *five billion* aluminum cans
 manufactured a year, it's only a drop in the bucket
 or, more precisely, the garbage can." **Recycling**

Recycling

We have to separate glass into brown and green. We
 think this is a nice color. It is sort of a blah green, and
 it is a mixture of the brown and green. If we could ever

get people used to using a bottle like this, we
 could save ourselves quite a bit of work in recycling
 this glass." Mary Karraker — **Ecology Lady**

Recycling

Shredders cost up to \$4,000,000. They have a capacity
 of up to 1,000 cars a day. At full capacity, a shredder
 might dispose of a quarter of a million cars a year.

But, with some 8,000,000 cars becoming obsolete
 every year, private industry cannot profitably recycle
 this mammoth mess of metal." **Realities of Recycling**

How Creative Idea-Selling Can Help Build Production Business

"STAY IN FOCUS on your client or prospect's problems and your own will be pretty well solved," was the text of our recent reply to a Midwest producer's "slow-business" lament. His case certainly wasn't terminal, fairly low overhead due to a favorable studio lease, not too many "deadheads" on a modest weekly payroll and, as his principal assets, a fine reputation for carefully-made, reasonably-priced films delivered when promised.

But too much attention to Phase I of the Nixon "revised" Game Plan and to stock exchange vibrations had fogged his business-getting acumen. In a time when prospective clients in industry needed his services more than ever, when confusion was rife and clear understanding of lasting principles a vital antidote, this producer's "problems" took precedence over those of his clients and prospects.

We spent a little more time on an approach to constructive, business-getting ideas that may furnish valuable clues for any well-qualified film producer. For instance, during that inevitable "valley" between peaks of actual production, how much time do you spend analyzing financial and marketing media for "ideas that should be put on film?" When did you last set up a solid prospect list of companies, trade groups, etc. in your area and then "matched up" that list with potential titles that could help to solve their problems?

We found clues plentiful in a single week's mailbag: "The United States has become the first country in the world to have the majority of its workers engaged in the production of services rather than goods. . . . The service sector, then, would be comprised of wholesale and retail trade; finance, insurance, and real estate; government; and the traditional services, including professional, personal, business, and repair services."

Weaknesses among companies active in this sector abound: attitude, technical skills for repair, guidance to consumers to help avoid costly, often needless calls for service the customer could handle himself with a little more product knowledge; all kinds of com-

paratively inexpensive communications' tools in this presently critical business area would reduce costs and improve relationships.

"Alcoholism is the nation's No. 3 health problem, surpassed only by cancer and heart disease. Alcohol addicts number some nine million." With a very sizeable number of AA (and drug) people on payrolls, this is not just a "government" problem but a serious matter for American business.

"The new Federal Safety regulations you talked about in a recent Camera Eye column are not really understood within industry," writes an a-v specialist. And how well do you understand this new law and the importance of industrial accident prevention films in thousands of companies?

Take the positives: the need and on-coming boom in homebuilding . . . "housing has been depressed for a year and a half but now seems well on the road to recovery." Are contractors, dealers and building tradesmen "up" on your client's product developments? Have you seen those national ads, sponsored by The Flintkote Company, under the general theme of "before you buy one of the millions of houses to be built during the 70's?" Every one of those should be better told on film.

This column is too-limited in space for a subject worth a book-length challenge to *re-charge your business-getting batteries*. Even today's "negatives" such as "suggesting measures for conserving electrical energy" in keeping with the nation's unparalleled energy demands and seasonal power shortages and our almost total misunderstanding of safety inherent in modern nuclear power plants, are immediate *film ideas*.

Sure, the prospective sponsor knows about these problems and may well be aware that something is lacking in getting his ideas across to both workers and publics. It's up to you to ring that bell, carry in a brief outline of a film or a series which a specific client should be thinking about.

There's a final, very important ingredient in successful, creative film-idea selling: keep informed about the producer's essential partner: distribution, i.e. getting that film used: Bone up on the national film distribution services, what they can do, what it costs (often, less than pennies-per-person) to get the medium to intended

viewers. *Utilization* is the key word for your sales vocabulary. For instance:

If simple instructional material is to help service or repairmen, why not use one of today's 8mm "personalized projectors?" How much will ten, one hundred or a thousand of these cost? Why not charge the "package" of monthly short films and projectors to dealer advertising or to his service instruction billing?

If you're going to help alert the consumer, remember that both commercial and educational television stations are looking for *genuinely-useful* consumer guidance films to show on Public Service time. Getting to future home-makers in the schools? They're better-equipped with those thousands of 16mm sound projectors than any other kind of equipment.

This is the kind of knowledge vital to successful film selling. Make a file of every scrap of distribution information you can acquire: from Association-Sterling Films, Modern, RHR or whomever—and *know* what these experienced distribution services *can do to help you and your clients*.

In the world of the blind, the one-eyed man is king. In the world of today's business, the informed, thoughtful and aggressive producer will help his customer and himself.

Eight "Best of Industry" Films to Represent U.S. at Barcelona

The United States will field a smaller-than-usual "team" of this country's outstanding 1971 industrial films at the 12th International Industrial Film Festival when that event is held November 2-6 in the Palace of the Nations at Barcelona, Spain. Official U.S. entries by CINE and the National Association

continued on page 22

camera eye *continued*

of Manufacturers include the Bell Labs' *I. C. A. Shrinking World*. The Institute for Highway Safety's *In the Crash*; Kaiser Aluminum's *Light, Strong and Beautiful*; Superior Electric's *Position Counts*; and two IBM films, *Of Men and Demons* (IBM World Trade) and *The Real World*, a humorous look at a particularly trying day in the life of an IBM Customer Engineer.

Two peacetime nuclear energy films, both sponsored by the Westinghouse Power System Co., were also scheduled for Barcelona at presstime. The usual U.S. entry has totaled the maximum of 15 titles in the Festival's seven categories.

Delegates to the Festival from the U.S. who have been nominated by CINE president William G. Carr include Lee Coyle (Ohio Bell Telephone Co.); James Damon, Jr. (IBM World Trade); Bob Unrath (New York Port Authority); Michael Ritt, Jr. (Combined Insurance Co. of America); Dick Roxas (Westinghouse) and William Walton, also of IBM. Representation at Barcelona by any or all of these a-v specialists would be most welcome!

In the week immediately following the International at Barcelona, CINE

will hold its 14th Annual Awards Presentation Ceremonies and Showcase of Award-Winning Films at the Mayflower Hotel in Washington, D.C. This two-day event honoring CINE's 1971 Golden Eagle selections will open at 9 a.m. on Thursday, November 11. Among the "introducers" at showings relevant to business, industry, agriculture and medicine, etc. are Ott Coelln (Business/Industry); Bernie Landou (Travel/Exploration); Dana Bennett (Agriculture); Ralph Creer (Medical); and Lou Hazam (Documentaries).

The Producer's Reference Shelf is a Key to Successful Selling

A correspondent recently asked us, "what do *you* read to keep up with business trends, to "spark" the ideas you've talked about for prospective, needed film titles?" So, let's list some "imperatives" for your weekend or evening reading:

No. 1: your regional edition of the WALL STREET JOURNAL and especially the editorial page. No. 2: THE PUBLIC RELATIONS JOURNAL. No. 3: U.S. NEWS & WORLD REPORT, among our favorite national media.

We look to book lists for "non-fiction" titles of "books that could make useful films" just as Hollywood turns to best-selling fiction and plays for

box-office, pre-sold winners.

Industry literature: out of national distribution companies, such as Modern's listings in their "Index and Guide" and inside-stuff in their monthly "MEMOS." Other distributors will keep you on their mailing lists for equally valuable tips on how they are serving industry.

And we keep in touch with really-informed specialists like Ralph Creer, American Medical Association film and television executive; key U.S. government people in charge of a-v programs in Washington. Television data out of the National Association of Broadcasters and from the specialized TV industry journals has been helpful. U.S. Commerce reports on industry trends are useful.

The important thing is to "keep in touch"—to be well-informed—and then to use your knowledge in prospecting. But don't *write* the script, just fire away with subject ideas, sketched completely enough to show that you *know the prospect's problem and how it might be solved*.

All of this is called "R & D" (Research & Development) and your film prospect is probably spending large sums to insure his company's future. It certainly is appropriate to budget a little of your time and money to assure yours. —OHC

MAYBE TOMORROW . . .

. . . is the title of a film written by Gene Starbecker for a midwest producer who realized the "best" costs very little more.

His decision paid off. His client is happy. His accountant is happy.

And the film, many feel, may be a contender for the Academy Awards.

If you have a script problem and want to offer your clients the best, call today . . . if not, "Maybe Tomorrow."

INSTANT EVERYTHING

(the next-best thing to instant success)

Most moviemakers will agree that the difference between good footage and great footage goes beyond talent and luck—it's the little things that often make the difference. Little things like camera mobility, to follow fast-moving action. Or a few extra dB of silence on set. Little things... like the fleeting moment of news, captured because of a minute saved in set-up time. Or an unusual camera-mount that produces the "different" point of view you need. Little things do mean a lot. And, for many of those important "little things," camera professionals turn to Cine 60...

Instant Power

Wherever you go, whatever the shooting situation, Cine 60's exclusive power "button" gives you the power to run every professional camera on the market. Plus the all-important mobility to go where the action is. Available in voltages from 6 to 30V (and up to 7 amperes-hours), it features rechargeable nickel-cadmium cells, sealed design and an automatic overload safety switch. With built-in charger and plug-in coiled power cable, it is one of the most widely used power sources available today.

Instant Quiet

Silence is golden, yet relatively inexpensive with the Cine 60 battery-powered fiberglass Blimp for Arriflex cameras. Only 19 pounds, the Blimp permits shooting in even the most restricted spaces—with all standard lenses (even 18mm, without vignetting!). Inside, the camera is securely mounted, yet isolated acoustically from its surroundings. On the outside, a new, gear-driven mechanism permits smooth, accurate follow-focus via a large, easy-to-use knob. All other controls and connections are conveniently placed on a rear control panel.

Instant Camera Pod

Our single universal shoulder pod ("unipod") is a lightweight shoulder mount that accepts all cameras. Easily removable between takes, it keeps the camera in the ideal shooting position while offering the maneuverability of single-shoulder construction. Used with the Uni-Eclair Mount (detailed later), this is the only practical pod for the Eclair NPR-16. (By the way, we also have an excellent double-shoulder pod as well.)

Instant Camera Platform

Wherever and whenever you need a stable camera platform, chances are our Vacu-Platform can provide it. This rugged suction-actuated device can be positively fastened to any smooth surface (car tops, floors, etc.) without marring. A flick of a lever on its extra-large suction mounts does the job. Especially useful for low-angle work, it mates with standard tripod heads.

Instant Camera Mount

If you've ever watched a good shot pass you by while trying to thread a camera onto a tripod or shoulder pod, the Cine 60 Snaplok is your answer. Combining rapid, fail-safe operation with the ruggedness and precision alignment needed for day-in, day-out use, the Snaplok features light weight and high rigidity. One section mounts on the camera; the other on tripod or shoulder pod. A single pushbutton instantly separates the two. The base unit of the Snaplok is compatible with standard 1/4" and 3/8" sockets.

Instant NPR

Our Uni-Eclair Mount is just what the name implies—a universal mount for the Eclair NPR camera. Rugged, yet surprisingly light, it may be left on the camera at all times, ready for hand-held operation or shooting with a tripod or shoulder pod. And, it makes a handy camera rest between takes.

Instant Zoom

If you own one of the fine Angenieux zoom lenses, you can have smoother, more consistent zooming with one of our electric zoom drives. Available in four sizes (for the 9-95mm, 12-120mm, 12-240mm and 25-250mm), these units feature a precision gear assembly which mounts securely and directly to the lens barrels. The gear assembly, in turn, is rigidly coupled to a high-quality DC motor via a flexible shaft. The motor is powered by a transistor-regulated nicad battery pack featuring directional push-buttons and a smooth, variable speed control—all contained in a convenient, palm-sized case—with built-in recharger. (We also make an instant-mounting, collapsible rubber lens hood for the Angenieux 25-250mm zoom.)

Instant Rentals

Cine 60 also enjoys an excellent reputation for its line of top-quality rental equipment. All thoroughly maintained and delivered on-time. We'd appreciate the opportunity to fill your rental needs.

Instant Information

Whatever your filming needs, all you need to know for "Instant Service" is one name and one number:

State Legislature

Minnesota film tells how laws are made.

CITIZENS ACROSS THE COUNTRY are looking harder these days at the quality of their state legislatures. Headlines in papers and magazines attest public concern over inadequacies and corrupt practices.

At the same time, legislative bodies in more progressive states have insti-

tuted improvements in their procedures, and some have taken positive steps to inform their constituents of how the legislature works, and how the public, itself can act to influence the law-making process.

An outstanding example of this can be seen in Minnesota, where the state legislature has sponsored a motion picture *There Oughta Be A Law*, now widely seen throughout the state.

The film revolves around an angry voter, a State Representative, a State Senator, and a bill for a law—all of them fictional. While the audience watches the interplay between legislators, the public, Committees, and

lobbyists on the bill; they also learn much of what goes on in any state legislature on a typical bill.

While the main characters and the bill itself are fictitious the film locale and supporting players are real. Senators, Representatives, and public all play themselves. By the conclusion of the 26-minute film, and the defeat of the bill, the audience has learned that the passage of any legislation is the result of a careful balancing of the wide interests represented in any state.

The idea for a motion picture of the mechanics of state government was originated by a group of legislators, who later formed a Joint Subcommittee to oversee production. Twelve Twin City producers were given an opportunity to make presentations for the film, which was finally awarded to Reid Ray Films, of St. Paul.

Since Reid Ray Films had produced over 6000 films in the past 60 years, and the subcommittee had no experience at all, it was first determined that everyone concerned should know exactly what to expect in the "client role" and the "producer role" so that the "Committee Amateur Producer" syndrome could be avoided. The Subcommittee gave its complete cooperation and adopted a faith that there would only be one producer, who knew what he was doing, and no 12 (the subcommittee). Toby Carlson's script demonstrates the power of each Minnesota citizen to *make change*—to create better laws or to help in making a law to assist in situations that never existed before. The citizen has the power to elect local Congressmen who have the power to listen to their constituents and reflects the needs of their people at the Capitol. The visual parallel between the voter pushing the voting machine lever for his or her candidate, the power of the legislator to push the "yes" or "no" button for a bill, presented a rather interesting visual symbolism which eventually was carried through film.

There Oughta Be A Law is now being shown to students and civic groups throughout Minnesota. Other interested parties may make inquiries about rental or sale to H. Blair Klein, Senate Counsel, State Capitol, St. Paul, Minn. 55101.

"SHORT" CHANGED?

Are you aware of the changes taking place in sponsored communications? Take theaters, for example. Today sponsors realize that the demographics, dollars and delivery system of theatrical distribution make good sense. Theater Cavalcade, our industry "newsreel," is attuned to the new thinking. In quick, graphic strokes sponsors are making an impression—low profile, high impact. For \$7500, here's what sponsors get: a 2-minute story or segment, fully-edited, scripted, narrated, with music, effects and "headline" title; distribution in 35mm to about 400 first-run, major market (top 10) theaters; and an audience of 1½ million persons. And how is the message received? Catch Cavalcade in your local theater. It comes on big and strong. As one exhibitor wrote us: "It was better than our feature film."

You too can join our ever-growing Cavalcade of Sponsors: General Motors, Foster Parents Plan, Sears, Roebuck and Co., Empire State Bldg. Co., Southern Pacific Transportation Co., Humble Oil and Refining Co., American Iron and Steel Institute, Gulf Oil Corp., Iberia Airlines, Bank of America, and South African Tourist Corp.

You can find out more about Cavalcade and our other sponsor services by completing and clipping the coupon below.

Surgery

American College of Surgeons shows surgeon's life as it really is.

MEDICINE must certainly be ranked among the most popular of all areas of subject matter in the theatres and on television, right up with the Western, crime and detection, espionage, sports and travelog. We've seen (and enjoyed) *The Interns*, *The Doctors*, the wise and good *Dr. Marcus Welby*, and the young, surly but heroic *Dr. Casey*. In time, no doubt, we might also have *The Nurses*, *The Dieticians*, and (why not?) *The Orderlies* and *The Candy-Strippers*.

Audiences, well attuned to the problems of the fictional medics, should be

even more receptive to the authentic story of real medical heroes in *The Surgeon*, a 14-minute general interest film produced by Cal Dunn Studios under the sponsorship of the American College of Surgeons. In addition to wide showing on television, *The Surgeon* will find its most important audience among high school and college students who, on graduation, must decide the further direction of their careers. It is hoped that many among them will be motivated to enter medical school and, in time, to qualify as surgeons.

The Surgeon combines live action and animated still photography, shot at hospitals in the Chicago area and elsewhere. From the outset, all concerned—Heinz Kuehn, Director of Communications, American College of Surgeons, Cal Dunn, producer, and John Davenport, writer—were determined to depict the work, the demands

sports or travel featurette. Instead, they will join the surgeon in his office, in the clinic, in the lecture room, at consultation, during patient rounds—and in the operating room. They will not see the usual clichés of the significant pause, the meaningful glance, nor hear commands of "scapel, clamp, suture, suction". They will see much never before shown on a public screen: the draped site of the operation, the red line of the primary incision, the beating human heart, the open chest as a pacemaker is inserted, the life-saving kidney at the instant of transplant, the human eye as sight is surgically restored, the surgical correction of a facial deformity.

They will see the surgeon and surgical team as they work together daily and nightly in thousands of hospitals today. They will gain a new understanding of the surgeon's work that could come to them from no other source. In this way they will gain a new appreciation of the marvels of modern surgery and of the surgeon's contribution to life, health and well-being, or, as the film phrases it, in making "poor lives tolerable and tolerable lives happy."

Heinz Kuehn, Director of Communications, American College of Surgeons, center, and John Davenport, writer, in surgeon's "prep" room.

Simultaneous motion picture and still photography during surgical operation.

and the rewards of surgery with good taste and realism. The film shows the great achievements of modern surgery as a healing and lifesaving art. It also shows the long hours, the varied challenges and the heavy responsibilities which a surgeon faces not only in the operating room but in preparing the patient for the stresses of surgery, and in supervising his post-operative care.

Laymen who visit a busy operating room find it an unforgettable experience. Members of the general audience, finding *The Surgeon* on their favorite channel, will be forewarned by the title that this is not the usual

College recruitment

Video cassette is first in a series of college guidance tapes.

A NEW SERIES of video presentations, the *National College Cassette Catalogue*, has been designed to provide the college advisor and admissions office with a color videotape cassette presentation of the recruitment story of individual colleges. Prospective students will be able to look at scenes of the colleges he is considering and to hear of their advantages, which could formerly only be gained by an interview with admissions offices and a visit to the campus.

The first cassette was presented at the National Association of College Admissions Counselors convention in San Francisco on September 29. It was played on a Sony Videocassette unit, one of the playback modes being

continued on page 30

This looks like 20 pounds
of samples,

but it's really 20 minutes
of dynamite.

Because film presentations are more dramatic. More interesting. More impressive. And they are always perfect.

Particularly when your salesmen carry the Bohn Benton Institor; a handsome, rear screen, Super 8, sound and motion picture projector.

It's an attache case. Neither bulky, nor awkward. Only 4-inches wide.

It's simple to operate. In less than 30 seconds, the unit can be set up and running in broad daylight.

It's cartridge loaded. There's no film threading and each cartridge plays film up to 20 minutes long.

It's versatile. The Institor easily converts to front projection for larger audiences.

And it's sensibly priced. \$300 for a single unit. Or as low as \$240 in quantities.

For more information, write Bohn Benton Inc., 110 Roosevelt Avenue, Mineola, N.Y. 11501.

Bohn Benton Institor

You'll be sold on the way it sells.

considered for final national distribution.

The cassette is a documentary about Pace College, and was recorded by Nicholson-Muir Productions, producer of the catalogue, on IVC one inch color tape, using the model 960 recorder, coupled with an IVC 500 camera and Taylor Hobson 10:1 zoom. Four and a half days of videotape shooting and a day of filming kept the crew busy moving from one location to another.

Director, cameraman, assistant cameraman, audio man, video operator and production assistant moved in with the portable equipment to record the activity at the school's two campuses, augmented with microphones, lights and cables. For outdoor shooting, and some interiors, the van was used as a mobile control room.

Single camera shooting techniques were employed, and subsequent transfer to A & B rolls for editing gave the director latitude in completing the pro-

Director Nick Nicholson and cameraman Robert Rushing on location at Pace College.

duction. The importance of high quality final results dictated post-production on quadruplex recorders.

Since the Catalogue is designed to be updated with subsequent additions and changes in the academic offerings, the original production master will be retained. Voice-over and video changes can be electronically inserted.

Nicholson-Muir has received enthusiastic support for its educational venture from college placement officers, university and college administrators, and educational association. In four years it is expected that most major colleges in America will be represented in the Catalogue. A central library will distribute the cassettes to high school guidance departments and other groups on a rental basis, together with players.

Medallic art

Franklin Mint uses film to encourage commemorative medal collecting.

JOSEPH M. SEGEL, president of The Franklin Mint, conceived the idea of producing proof quality commemorative medals in limited edition for private collectors in 1964. On the basis of this idea he founded the Franklin Mint and has built the company from a small enterprise to a multi-million dollar organization (1970 sales of \$45 million) which is now the largest private mint in the world.

Some idea of how and why the company has grown so fast can be seen in *Of Art and Minting*, a behind-the-scene filmed exploration of the world of medallic art which is now being

seen across the country on TV and by group audiences via Modern Talking Picture Service.

The central theme of the new movie deals with the renaissance of medallic art. The amazing transformation of the original sculptors' model to gleaming pieces of medallic art is shown in graphic detail and explained by the artists in their own words.

Capturing the delicate sculpturing of the medals was, according to Lee Bobker, of Vision Associates, who produced and directed the film, "the single most difficult photographic challenge I have ever encountered." Herbert Raditschnig, Vision's outstanding Austrian cameraman, was brought in to do the job, and succeeded beautifully.

Of Art and Minting begins with an almost surreal photographic journey through the history of medallic art evoking the ages of man. Filmed on location in Stratford, England, and in Rome, Milan and Florence, the film

then examines the genesis of five separate works of art. Piero Monassi, a young Italian sculptor, who is sculpting The Franklin Mint series on The Genius of Michelangelo, is seen at work in the Sistine Chapel and at The Accademia in Florence and he himself discusses his artistic approach. The same technique is used as we follow the American artists Harold Faulkner on his history of the United States series and Anthony Jones on his Big Game Series for the East African Wildlife Society, Gilroy Roberts of his widely acclaimed series on Birds, and the British sculptor, Philip Nathan, as he moves through the world of Shakespeare in his design for the Shakespeare series. Each sculptor talks about his own approach while Raditschnig's camera probes the very essence of the work.

Philadelphia sculptor Harold Faulkner relives history on the fields of Valley Forge for the Franklin Mint

Upon the film's completion, Segel then directed, as too few clients do, that the film be given the maximum support in term of previews, premieres and press and television showings. Its world premiere was held to great acclaim at the American Numismatic conference at the Washington Hilton and supportive television showings were arranged by Modern Talking Picture Service.

Following this, subsequent premieres were shown at the Philadelphia Art Alliance and at Lincoln Center in New York. A beautifully designed brochure was ready and available with the film and there will probably be some special theatrical short version distributed in the nation's theatres throughout the year.

If you want
the sock, the
sophistication and
the sizzle of
multi-image, you
have to pay the
price.

\$465.

Actually, *half* price.

Working on tone pulses from your stereo tape recorder, our Quadra Que four-channel programmer runs any combination of four projectors to give you a faultless mix of slides, filmstrips and motion pictures. And if you run fewer than four projectors, you can use Quadra Que's automation to program anything from the house lights to the popcorn machine.

Quadra Que gives you important *exclusives*, too. Remote control, for example. Toggle-action programming switches. Compact, ultra-reliable integrated-circuit design. And 15-amp power outlet for your movie projector.

Want capability that grows with your ambition? Just add our companion Quadra Que 2 programmer, and get a total of eight channels, all still automated from a single track of your tape recorder.

Then there's the exclusive that may mean more to you than all the rest: programming sophistication without temperament. Even with the least expensive tape recorder, Quadra Que works perfectly every time.

If you're going into multi-image, go easy. See Quadra Que in action at any Spindler & Sauppé dealer, or write Spindler & Sauppé, 13034 Saticoy St., North Hollywood, Calif. 91605 (phone: 213-875-2723) for full details.

AUDIOVISUAL BRANCH OFFICES OF THE NATIONAL ARCHIVES

James W. Moore, Chief
The Audiovisual Branch Office of the National Archives, National Archives and Records Service, General Services Administration is the repository for more than 60 million feet of historical motion pictures created by 100 Federal agencies and non government producers. The ever growing collection includes a wide range of subjects covering the period from 1896 to the present. Films are not loaned, but may be viewed by researchers, film producers, or their authorized representatives. Duplicate negatives or masters of films or scenes may be purchased by individuals or producing companies subject to consent of the depositing agencies and copyright restrictions, if any.

DEPARTMENT OF AGRICULTURE

Office of Information
Motion Picture Service
Washington, D.C. 20250

- The Motion Picture Service of the USDA produces motion pictures in color and black-and-white on agricultural and related subjects for various agencies within the Department and, on occasion, for other Government agencies. Production and laboratory services are also available on a cooperative basis with land grant colleges and universities.

Martin Lobdell, Chief, Motion Picture Service

Activities: The USDA currently has more than 300 films in distribution with an estimated audience of 380 million persons. These films cover such subjects as conservation, forestry, agricultural research, insect eradication, control of animal diseases, consumer information, rural area development, nutrition and marketing. Maintains an extensive 16mm color stock footage library of agricultural scenes which are for sale at nominal cost.

Facilities: The USDA Motion Picture Service has complete in-service production and laboratory facilities which have been in continuous operation since 1912.

Distributions: Films for school and group showings are distributed through 69 cooperative film libraries located in each state. Films for TV bookings are distributed directly from the Distribution Section, and prints of most films may be purchased from the Business Management Section. Catalogues are available of motion pictures, films suitable for TV showing, and of stock footage scenes.

Publications: Two catalogs contain complete listing of USDA motion pictures; one of these provides data on films for general 16mm distribution; the other lists films available for public service showing by television stations.

UNITED STATES ATOMIC ENERGY COMMISSION

Division of Public Information
Audio-Visual Branch
Washington, D.C. 20545

- The Audio-Visual Branch of the Atomic Energy Commission has its primary function coordinating the production of AEC films and responding to requests from the public media in all the audio-visual fields for assistance in the preparation of films, stills, tapes, slides and other audio-visual materials on atomic energy.

Edwin L. Wilber, Branch Chief
Phone: (301) 973-5365

Activities: This branch plans and carries out film, TV, radio and still pictures projects to advance specific Commission Programs, and acts as advisor to Commission and contractor personnel in Washington and nationwide on audio-visual problems and projects. In 1971, 17 films were produced by the Commission and its contractors; about 6 films are planned for 1972. In addition, TV clips and radio platters and tapes are produced by the Commission and contractors every year. This branch also places Commission- and contractor-produced motion pictures into loan and commercial sales channels, determines the content of the 11 domestic and 9 overseas film libraries, and issues a combined Information—Education and Professional—Technical film catalog and a Classroom Films on Nuclear Science catalog.

Facilities: AEC has no motion picture production facility or motion picture laboratory, but uses Government and/or commercial services.

Distribution: AEC operates an 8,000 still library, 35mm color slide library, and distributes 14,800 16mm prints through 11 domestic film libraries which cover particular geographical areas. All films are for free loan. Each library has about 300 titles (education, information, technical-professional, and historical). The Commission also has four overseas libraries at its offices at the U.S. Embassies at London, Brussels, Tokyo, Rio de Janeiro and Buenos Aires, stocked with educational and technical films and also sup-

plies films to the film library of the International Atomic Energy Agency in Vienna, The American Film Library, The Hague, Holland, The Puerto Rico Nuclear Center, and the USIS-Stockholm for use throughout Scandinavia. The Brussels and Buenos Aires libraries have about 80 films each in French and Spanish respectively. Information on libraries available from Washington office.

DEPARTMENT OF COMMERCE

Washington, D.C. 20230

- The U.S. Department of Commerce produces and circulates motion pictures dealing with those domestic and foreign subjects relating to the offices under the jurisdiction of this Department.

Bureau of Domestic Commerce

Saul Padwo, Director
Business and Scientific Equipment Div.
Phone: 967-3518

Earl Young, Motion Picture Analyst, Motion Picture & Photographic Products Branch
Phone: 967-2911

- The Motion Picture and Photographic Products Branch of this Division serves the motion picture, photographic, and audio-visual equipment and supplies industries. Its primary function is to foster, promote, and develop the foreign and domestic trade of these industries. It provides market development counsel to producers and exporters on where and how to cultivate and expand their sales. It participates in tariff and trade negotiations, maintains information on foreign trade trends, and periodically issues basic trade statistics on U.S. exports and imports of photographic goods. The Branch acts as a focal point for industry with reference to advice and guidance to other agencies and use of other agency facilities.

U.S. DEPARTMENT OF COMMERCE

NATIONAL OCEANIC AND
ATMOSPHERIC ADMINISTRATION (NOAA)

Stanley B. Eames, Director of Public Affairs

Phone: (301) 496-8243
Elliot A. Macklow, Chief, Motion Picture Service

Phone: (202) 343-6897
George A. (Jeff) Baker, Radio/TV, Film Officer

Phone: (301) 496-8921
Marian P. Bailie, Film Librarian
Phone: (202) 343-6919

NOAA's centralized film development office within the Office of Public Affairs administers and supervises the production of informational and educational films for all components of the Agency. Film and tape spots, short and special features for both radio and TV are also under the direction of the office.

NOAA's film library system is, at present, a dual system. Films formerly distributed by ESSA (the U.S. Weather Bureau, and the U.S. Coast and Geodetic Survey) are now handled by Modern Talking Picture Service, and requests for prints should be directed to them. A catalog and order form is available on request. Inquiries about these films as well as radio and TV activities should be directed to: National Oceanic and Atmospheric Administration, U.S. Department of Commerce, Washington Science Center, 6010 Executive Blvd., Rockville, Md. 20852, Attention: PA.

Fishery motion pictures, formerly produced and distributed by the Bureau of Commercial Fisheries of the Department of the Interior, are distributed through a film library system consisting of about 200 Government and private film libraries. About 30 fishery motion picture titles are distributed free of charge upon request. Provision has been made so that most of the films are cleared for television although special permission is required before telecasting. Stock footage is not available. A catalog listing the fisheries films distributed, and the instructions for obtaining them may be obtained free of charge upon request. A central film library for fisheries films is maintained. Fisheries films and information about them may be obtained by writing: Motion Picture Service, NOAA, 1815 N. Ft. Myer Drive, Rm. 601, Arlington, Virginia 22209. Because of the large domestic demand, at the present time, are not being loaned for use outside of the country. Purchase of print arrangements can be made by application to this office. Applications are also accepted from institutions wishing to serve as non-profit libraries.

Production of most of the Agency motion pictures is accomplished by using commercial contractual motion picture facilities. Production is sponsored by both Government and industry. Information regarding the sponsorship of oceanographic and atmospheric motion pictures should be addressed to: Chief, Motion Picture Service, 1815 N. Ft. Myer Drive, Rm. 601, Arlington, Virginia 22209.

This film wasn't born yesterday.

It just looks that way. Why? Because, it's been rejuvenated by Rapid Film Technique.

Sure, it was in bad shape when it came to Rapid, but we made it like new again.

Fact is, most film being scrapped today can be salvaged. There's no need to order expensive new prints.

Whatever the condition of your film, Rapid can repair, restore and rejuvenate it.

No matter how scratched, brittle, oil-stained or dirty it is. No matter how badly spliced. Or Torn. Rapid can give it new life.

That goes for color as well as black and white; 8, 16, and 35mm.

What's more, after we've revitalized the film we give it a special protective coating that resists future damages.

So why spend a fortune on new prints? Come to Rapid Film Technique and renew your old ones.

Send for your FREE Trial Certificate today and see for yourself what dramatic effect rejuvenation can have . . . on your films and to your budget!

A new storage and shipping service

What do you look for when you want to store and ship your film? Dependability. Safety. Speed. Now Rapid Film Technique can give you all three plus:

- Completely fireproof building (15,000 square feet).
- Temperature & humidity controlled environment to maintain proper conditions.
- A company with over 30 years experience in the motion picture business.
- Pickup and delivery service.

Write for free brochure.

GOVERNMENT

DEPARTMENT OF DEFENSE

Office of Public Affairs Directorate for
Defense Information—Audio-Visual Division
The Pentagon Washington, D.C. 20301

• This Division of the central Armed Forces contact for news media and producers in the important fields of radio, television, still pictures and motion pictures. Direct contacts on national and international release matters in these fields are:

Norman T. Hatch, Chief, Audio-Visual Division

Phone: OXford 74102

Activities: The Motion Picture Productions Branch approves release of Armed Forces stock footage which cannot be produced commercially and assists studio motion picture

and independent producers in the production of entertainment and documentary films and theatrical productions relating to the Armed Forces. Information on Armed Forces films available for public non-profit show or cleared for public non-profit showing or cleared for public service TV programs can be obtained from the Branch.

The Radio Television Productions Branch approves release of Armed Forces stock footage which can not be produced commercially and assists network and independent producers in the production of documentary and entertainment programs related to the Armed Forces.

The Audio-Visual News Branch releases approximately 200 (2-3 minutes) subjects to the TV and theatrical newsfilm media annually. It maintains two small Pentagon studios for servicing the news media and radio programs which feature interviews with top Defense officials. It also releases taped and filmed messages by Secretaries and Service Chiefs and provides advice and guidance to radio and TV news producers. The Branch also releases to the press and TV media approximately 2,000 photographs each year.

DEPARTMENT OF DEFENSE

Defense Supply Agency: DSA

Administrative Support Center

Technical Presentations Division

Cameron Station, Alexandria, Virginia

• Technical Presentations Division, DSA Administrative Support Center, is the technical source and point of contact for the production of films for the Defense Supply Agency. DSA's headquarters staff at Cameron Station and 15 primary level field activities furnish technical information for the films. The projects are aligned with the primary objective of the agency, mainly, to provide effective logistic support of the operating force of all Military Services in war and peace.

Activities: This division carries out a wide variety of activities, including audio-visual communications, motion picture production, technical and informational exhibits, still picture photography, and graphic presentation. The range of in-house staffing allows the division to contribute materially to the production of DSA films.

Facilities: DSA has no motion picture production, but uses Government and/or commercial services. The key personnel of Technical Presentations Division is as follows:

Chief, Morris S. Namkin

Phone: (202) 274-6075

ARMED FORCES INSTITUTE OF PATHOLOGY

Medical Illustration Service

Washington, D.C. 20305

Morris M. Goldberg, Chief, Medical Illustration Service

Phone: (202) 576-2866

Activities: This Institute makes or supervises films for the Armed Forces on medical subjects.

Facilities: In-house capability, and contract through Office of the Chief, Communication Electronics.

Distribution: AFIP operates a U.S. Army Audio Visual Support Center for medical films. The Institute procures and loans films to the Medical Services of the Armed Forces. Unclassified films are available to members of the medical profession, with borrower paying return postage. For information about available films, write the Superintendent of Documents, Government Printing Office, Washington, D.C. 20402 and refer to The Film Reference Guide for Medicine and Allied Sciences.

DEPARTMENT OF THE AIR FORCE

Our finest hours.

A/V Educator Premium Compact Cassettes, Open-Reel Magnetic Tape, and HP-100 Helical Scan Video Tape.

America's finest Audio Visual recording tapes are created to satisfy the needs of the educational community.

- All A/V Educator Compact Cassettes have a lifetime guarantee.
- A/V Educator *Premium* Cassettes are manufactured with high-density, low-noise *Micrekots™* tape that is especially recommended for high speed duplication.

In addition to the C-60, black and white Compact Cassettes are available in 10, 20, 30, 40, 90 and 120 minute lengths. Each is packaged in a two piece styrene Philips type box with our exclusively designed blank labels for cassette and box identification.

- HP-100 1/2" Helical Scan Video Tape is coated with Tru-Balance *Micrekots-V™* for longer tape life, brighter color and fewer dropouts.

A unique flow-activated binder system counteracts the heat of the rotating video head, and a dual lubricating system in the coating reduces friction and extends performance life. HP-100 is engineered to EIA and NAB specifications and is available in 1/2 and 1 hour reels.

- A/V Educator *Premium* Open-Reel Tapes are packed in a two piece styrene AudioFile® storage box with a library index card. Available in lengths of 600' to 2400'.

Write for literature and the name of your local A/V dealer.

Talk is cheap.

DO YOU REALIZE

that for **only \$12.98*** you can have your own 5 minute (18 f.p.s.) sound film?

DO YOU REALIZE

that **your office** can become a sound recording studio very easily?

DO YOU REALIZE

how much **Selling** and/or **Training** 5 minutes (or more) of Super 8mm Sound Film can do for your company?

* 75 feet of Super 8mm Color film	\$ 4.80
Processing of above	3.68
Sound Striping	4.50
TOTAL COST	\$12.98

FAIRCHILD
INDUSTRIAL PRODUCTS

HOW?

By using Fairchild's 711R Super 8mm Sound Projector which incorporates a magnificent recording capability!

The 711R Fairchild/Eumig is the world's most versatile Super 8 Sound Projector. It utilizes standardized +18 picture-to-sound Super 8 film. It takes all of the Kodak Cassettes (50', 100', 220' and 400'). It also takes Super 8 film on reels.

Standard features are: Automatic Threading; Automatic Rewind; Push Button Control (stop, start, repeat, rewind) and Controls for: Focus; Framing; Volume; Tone; and Zoom. A Push Button Remote Control is optional.

In addition, an exclusive Scene Repeat Programmer (our instant replay version) is standard and is activated merely by pressing a button. Then a push of the Rewind button at any time during the film's run automatically rewinds the film back to your exact "cue" point ready to replay that scene.

Super 8mm Film with magnetic sound is a lot less expensive than 16mm sound film. Every foot of Super 8mm film saves your budget dollars. Reproduction is accurate and sound quality is second to none.

Get in touch with your authorized Fairchild Dealer and get a "first-hand" demonstration of the 711R Sound Projector. You may end up saving your company many dollars by "Cheap Talk."

NATIONAL AUDIOVISUAL CENTER
Jack McLean, Acting Director
Phone: (301) 440-7753

The National Audiovisual Center, a Division of the National Archives and Record Service, General Services Administration, provides five main services:

1. **INFORMATION.** The Center is the main contact with the public and the Federal Government regarding audiovisual materials available from Federal agencies and where and how they can be obtained. Detailed information is gathered on all relevant materials and is made available on request.
2. **SALES.** The Center functions as the central sales point for most completed audiovisual materials produced by the Federal Government. Over 4,500 motion pictures, film strips slide sets and foreign language tapes are listed in a sales catalog available from the Center.
3. **DISTRIBUTION.** The Center provides a uniform, efficient and economic loan service of audiovisual materials, primarily 16mm motion pictures, deposited in the Center by various Federal Government agencies.
4. **STOCK FOOTAGE.** The Center operates the NASA Film Depository containing approximately nine million feet of motion picture depicting activities of the Mercury, Gemini, and Apollo space missions. Other Federal agencies are encouraged to place

stock footage with the Center for better utilization by the Government and the public.

5. **TECHNICAL ASSISTANCE.** The Center monitors basic ordering agreements covering production services, distribution services and other audiovisual services desired by the Federal Agencies. It also provides on request to other Federal Agencies limited technical assistance relating to such audiovisual services.

AUDIO/VISUAL EQUIPMENT

... the right answer to your problem

In communications, audio/visual is the current magic word . . . be it a sales story, assembly instruction, employee indoctrination, employee training, worker guidance, public information, or the new dimension in education.

Just having pictures and sound is not enough . . . there must be a dramatic, convincing presentation . . . and that presentation needs proper "audience-rated" dependable equipment.

LaBelle offers a reputable line of reliable audio/visual equipment. Descriptive literature is free. Contact V. M. Ivie, Manager, Audio/Visual Sales, LaBelle Industries, Inc., 502 S. Worthington Street, Oconomowoc, Wisconsin 53066.

LA BELLE Industries

If it's LaBelle, there's a good reason!

GOVERNMENT

produces and distributes films on Old Age Survivors and Disability Insurance and Health Insurance Measures. These are public information films designed to explain to the worker what he needs to know about the social security law and what benefits he might be entitled to. Most films and spots are intended for both television and theatrical use.

Distribution: Through 800 District and Branch offices throughout the country, prints may be obtained on a free loan basis. Prints may also be bought.

DEPARTMENT OF THE INTERIOR Washington, D.C. 20240

• The Department of Interior produces films which are concerned with the management, conservation and development of natural resources in every section of the Nation. Films are available from the bureau in which they have been produced.

Office of the Secretary

Office of Communications

Phone: (202) 343-3171

Inquiries concerning the use of Department of Interior films for television should be addressed to this office. A Department film catalog is available on request.

THE BUREAU OF LAND MANAGEMENT

John A. Mattoon, Chief, Office of Information

Phone: (202) 343-3609

• "The Last Frontier", winner of national and international awards for excellence, is a 29-minute film about America's last public domain lands, their history and future.

It is available from the Bureau's office in Washington, D.C. and BLM State offices in Portland, Sacramento, Phoenix, Reno, Salt Lake City, Santa Fe, Denver, Cheyenne, Boise, Billings, and Anchorage.

It is also available through Association Sterling.

THE U.S. BUREAU OF MINES

Dr. A. Nicholas Vardac, Chief Audio Visual Programs, Motion Picture Development and Production, Bureau of Mines, Washington, D.C. 20240

Phone: (202) 343-3359

Activities: The Bureau of Mines has a broad film program dating from about 1920. Motion picture subjects deal with natural resources of various states and with mineral commodities including metals, revealing the conservation ethic at work. Recently released films include: "Wealth of the Westland", "Mine Fire Control", "Tennessee and Its Natural Resources", "Oregon and Its Natural Resources", "Fahrenheit 3300, and The Minerals Challenge."

Facilities: All films are made in cooperation with private industrial firms which pay production costs and select commercial film producers. The Bureau maintains no production facilities.

Distribution: About 10,000 prints of films are distributed to the public on a free loan basis from the film distribution center at the Bureau of Mines, 4800 Forbes Ave., Pittsburgh, Pa. 15213, and from depositories in 40 states. Annual number of showings is 290,000 with a total audience including television of 25,000,000 people. Most films are cleared for free TV use. Single or block bookings arranged. Catalogs available.

Productions: Currently in production are films on "Molybdenum" and "Pennsylvania and Its Natural Resources."

THE BUREAU OF RECLAMATION

Ottis Peterson, Assistant to the Commissioner, Information

Phone: (202) 343-4662

Activities: The Bureau of Reclamation produces one or two pictures a year on water resources development in the seventeen western states—usually "low budget" sound color films, which run 14 or 28 minutes. Film catalogs are available from the Washington, D.C., office of the Bureau: the Regional Offices and the Film Distribution Center in Denver.

Distribution: Distribution of Bureau of Reclamation films is accomplished through the Film Distribution Center, Bureau of Reclamation, Bldg. 67, Denver Federal Center, Denver, Colorado 80225. On occasion, surplus prints are loaned to educational institutions for their distribution libraries.

THE U.S. GEOLOGICAL SURVEY

Frank H. Forrester, Information Officer
Phone: (202) 343-4646, 4647

• This office maintains and distributes

imited collection of motion picture films dealing with the earth sciences. Of major interest are the award winning films, "The Eruption of Kilauea", 1959-60 and the earlier film release, "The 1955 Eruption of Kilauea". These show, at close range, the spectacular eruption of the Kilauea volcano on the island of Hawaii.

Recent film releases include the "Alaskan Earthquake", 1964 and "The Sea River." The first of these films documents the destructive effects of the March 27, 1964, Alaskan earthquake both graphically and pictorially in on the spot scenes. The "Sea River" film records hydrological investigations carried on in the Amazon River Basin as a joint operation between the Geological Survey and the Brazilian Navy.

Requests for additional information about these and other films should be addressed to the Information Office, U.S. Geological Survey, Washington, D.C. 20242.

THE LIBRARY OF CONGRESS
Washington, D.C. 20540

Dr. John B. Kuiper, Head, Motion Picture Section

Phone: (202) 426-5840

The Library of Congress has an unrivalled collection of American films dating from the infancy of the motion-picture industry, which it has acquired through the operation of the copyright law and through gifts, and it also has a large body of foreign films turned over to it as a result of wartime seizure. The Library's activities in the motion-picture field include the registration of claims to copyright, the acquisition of films, the cataloging of films and related bibliographical data and a small study center for research.

The Library's Copyright Office has registered claims to copyright for motion pictures since 1894, when the first examples of this medium were deposited in the Library in the form of photographic paper prints; since 1912 the copyright law has provided for the registration and deposit of motion pictures as such. Generally, under the provisions of the motion-picture copyright agreement between the Library of Congress and the copyright proprietors, the films are returned to the proprietor by the Library after registration, but the Library has the right to claim the deposit for its collections later.

The Library's collection of motion pictures comprises about 177,000 reels and is in the custody of the Prints and Photographs Division in the Reference Department. It is primarily an archive in nature, and reference service is provided to assist research activities. The Library does not lend motion pictures, but some films may be copied under certain conditions; copying requires the signing of a standard agreement concerning the clearance of copyright and the copying of equivalent footage for the Library.

**MEDIA SERVICES
AND CAPTIONED FILM FOR THE DEAF**
(Division of Educational Services, Bureau of Education for the Handicapped)

Dr. Edwin W. Martin, Acting Associate Commissioner, Bureau of Education of the Handicapped

Phone: (202) 963-5925

The Media Services and Captioned Film Branch administers a program of educational media under P. L. 85-905, as amended by P. L. 87-715 and P. L. 89-258. These laws provide for promoting and general welfare and the educational advancement of deaf persons. Media Services and Captioned Films furnishes a free loan service of films for the deaf; conducts research in the use of films and other educational media for the deaf; produces and distributes films, filmstrips and related media for the deaf and for persons who work closely with the deaf (parents, employers, etc.). The branch also provides for the training of persons in the utilization of these materials and provides media equipment to most schools for the deaf.

Further expansion to provide media services to all types of the handicapped was made possible by enactment of P. L. 90-247. Actual program activities remained essentially the same as in previous years since no funds were appropriated for the expansion of the program.

**NATIONAL AERONAUTICS

Take this 30-second

photoquiz

**Don't feel bad if you fail* because
you'll win a CFI Film Footage Estimator.**

1. How much will it cost me to have a 23 minute 16mm Eastman color release print made if the laboratory charges 7¢/foot?
2. How many 35mm feet would I have if I blew up my 23-minute 16mm picture?
3. What about reducing my 23-minute 16mm film to Super 8mm - how long would that be in Super 8mm?
4. How much ECO can I have developed for \$250 at 6¢/foot?

*We'll even send you one if you don't fail

Undoubtedly you could answer these questions. They're not really hard. But you probably couldn't do it in 30 seconds—you'd need a little more time, and perhaps even a pencil and paper.

That's why we're making our Film Footage Estimator available free to interested professionals in the motion picture-and audio-visual industries.

It's handy. It has all the infor-

mation you need built right into its easy-to-read sliding scales. Answering the above questions in 30 seconds would be a cinch if you had one. And it's especially valuable for budgeting and planning.

How do you get a CFI Film Footage Estimator? Simple. Just send in the coupon on this page or write to us on your letterhead. We'll send you one with our compliments, along with any special service information you may need.

All right, send me a Film/Footage Estimator. Let me prove to myself that I can answer those questions in 30 seconds.

Activities: The Motion Picture and TV Branch produces films and videotapes on all phases of aviation. They are designed to meet the needs of the public, the aviation community and the offices and services of the FAA.

Facilities: The FAA uses both in-service capabilities and commercial contracts in its motion pictures and producing videotapes.

Film Distribution: Distribution of FAA films is handled through the Aeronautical Center Film Library, AC-44.5, P.O. Box 25082, Oklahoma City, Oklahoma 73125.

FEDERAL HIGHWAY ADMINISTRATION

William F. Hall, Chief, Photographic Section
Phone: (202) 426-60835

Activities: This Bureau produces films on subjects pertinent to highway development, safety and related subjects, sometimes in cooperation with other government agencies, state and local highway departments, and other interested organizations.

Facilities: In-house capability.

Distribution: These films are available on a free loan basis only to Federal and State government agencies, direct from the above address. All other requests for loan and sale information should be made to the National Audiovisual Center, National Archives and Records Service, Washington, D.C. 20409.

UNITED STATES COAST GUARD Washington, D.C. 20591

H. E. Whitwer, Chief, Motion Picture & TV Branch, Public Information Division
Phone: (202) 426-1587

Activities: The U.S. Coast Guard produces information and training, as well as recruiting films. The majority are in 16mm color-sound with running time of 3 to 28 minutes. Coast Guard films have consistently been selected by the United States government for entry in foreign film festivals, and have won a number of awards.

Facilities: In-house capability. The Coast Guard has limited in-house writing, directing, shooting and editorial capability. Additional production services as well as all processing and printing are contracted for as required.

Distribution: A catalog of U.S. Coast Guard films is distributed by film libraries in Washington, D.C. and at District offices in Boston, New York, Portsmouth, Miami, New Orleans, St. Louis, Long Beach, San Francisco, Seattle, Juneau and Honolulu.

Production: Current productions include training films, public information films and TV spots.

U.S. TREASURY DEPARTMENT

Washington, D.C. 20224

Internal Revenue Service

Philip S. Horne, Training Production Coordinator,
Phone: (703) 557-2933

Charles M. Lammond, Audio-Visual Officer, Public Information Division
Phone: WORTH 4-4037

Activities: Film for public and internal use are prepared by the Internal Revenue Service. Motion pictures for public viewing produced by the Public Information Division, those for employee training or orientation by the Training Division. The Training Division also produces filmstrips, slide/tape programs and videotapes for internal use. The Information Division also supervises production of television spot announcements for use during each tax filing period. For use during the 1972 taxpayer assistance campaign a new half-hour film, tentatively titled "It's That Time Again", is in production. It is intended to bring taxpayers up-to-date on changes in tax law and filing requirements. A dozen short TV spots to provide individual filing hints also are being produced.

Distribution: The 58 district offices, and several of the larger local offices, distribute Internal Revenue Service film productions. All clearances and releases have been obtained for general showing of Internal Revenue Service films.

THE UNITED STATES INFORMATION AGENCY Washington, D.C. 20547

Bruce Herschensohn, Director, Motion Picture and Television Service
Phone: 755-1890

Services and Facilities: USIA produces, acquires and distributes abroad motion picture and television films for the overseas information and cultural program of the U.S. Government. The USIA audience numbers several billion viewers in more than 100 countries plus around one billion persons who annually see USIA films in theatres and private showings. Output ranges the full gamut of both media—from brief newscasts to feature length motion pictures and hour-long television programs. These products are released in as many as 75 foreign languages. USIA has gone into satellite telecasting during the past few years and expects to use it more and more frequently in the future in order to reach USIA's audiences overseas.

ACTION

Washington, D.C. 20525

Jesse Gibson, Librarian
Phone: (202) 382-2820

Information regarding films produced for the Peace Corps may be obtained by writing to ACTION.

U.S. SAVINGS BOND DIVISION Treasury Department

Promotion Manager, U.S. Savings Bonds
Phone: (202) WORTH 4-5702

A variety of films telling the story of U.S. Savings Bonds is available suitable for community audiences of all kinds. Many are inspirational, some humorous, some informational. They were made available to the Treasury through the generosity of patriotic volunteers. Their showings take place under volunteer auspices as well. "The Land We Love", 16mm, sound-color, 23 min., cleared for television. "24 Hours in Tyrantland", 16mm, sound-black and white, 30 min., television rights by special arrangement only. "Granpa's Inheritance", 16mm, sound, black and white, 16 min., television rights by special arrangement only. "Star Spangled Salesman", 16mm, sound, color, 20 min., not for television. "Riley—Savings Bonds Salesman", 16mm, sound, black and white, 19½ min., television rights by special arrangement only. "Wilbur Gets the Message . . . About Payroll Savings", 16mm, sound, black and white, 20 min. "Rally 'Round The Flag", 16mm, sound color, 12 min., not for television. "The Story of Old Glory", 16mm, color, sound, 16 min., not cleared for television.

U.S. DEPARTMENT OF HEALTH, EDUCATION AND WELFARE Washington, D.C. 20202

ASSOCIATION OF MOTION PICTURE PRODUCERS AND LABORATORIES OF CANADA

Office (Of the President): 19 Fairmont Ave., Ottawa, Ontario; (Of the Executive Secretary): Suite 512, 55 York Street, Toronto 1, Ontario, Canada.

Officers: Tom F. Glynn (Crawley Films Ltd.) President; Henry Michaud (Stellart Drege Audio Ltd.) V. President; Robert C. Crone (Film House Ltd.) Honorary President.

Directors: Mr. Reg. A. Batten (Rabko Television Prod.); Pierre Brunet (Comprehensive Distributors Ltd.); Lew M. Parry (Lew Parry Film Productions Ltd.); Gunter Henning (Western Films Ltd.); Herald S. Kedey (Motion Picture Centre Ltd.); Findlay J. Quinn (Quinn Laboratories Ltd.); Ed. Zemla (Rose-Magwood Productions Ltd. Canada); C. Lynn Meek (Modern Talking Picture Service Inc.).

Membership: Canadian firms, proprietorships, corporations and agencies engaged in motion picture production or laboratory work are eligible for Active Membership. Persons, firms or organizations acceptable to the membership and interested in the furtherance of the motion picture industry in Canada are eligible for Associate Membership. Present membership: 59 Active Members; 10 Associate Members; Total 69.

Purpose: To promote the common interest of those engaged in the motion picture production and laboratory industries in Canada by maintaining the highest possible standards in the production of motion pictures for industrial, commercial, theatrical, or television release; to represent the industry in its relations with government, other associations and the public at large; to encourage government agencies to have their films produced by private producers.

ASSOCIATION FOR EDUCATIONAL COMMUNICATIONS AND TECHNOLOGY (A National Affiliate of the National Education Association)

Office: 1201 16th Street, N.W., Washington, D.C. 20036. Howard Hitchens, Jr., Executive Director.

Purpose: The improvement of education and the public welfare through the use of educational communications, educational technology, educational media and audiovisual

materials and methods. Membership consists of media directors and specialists in county and city school systems, colleges and universities, and state departments of education. School supervisors and administrators, classroom teachers, librarians, and audiovisual specialists in the armed forces, in industry, health, and religious groups are also included in membership.

Conferences: Annual national convention, Minneapolis, Minn., April 16-21, 1972; Las Vegas, Nev., April 8-13, 1973; Atlantic City, N.J., March 17-22, 1974; Dallas, Texas, March 9-14, 1975. Lake Okoboji Educational Media Leadership Conference, August 1972.

Activities: 1971-1972. AECT (formerly the Department of Audiovisual Instruction) adopted a new name in 1970 along with a new constitution reorganizing the association as an "umbrella" organization taking in a number of divisions and national affiliates representing special interest in the broad field of instructional technology. Through divisions and committees, AECT continues working in these areas of concern: developing and revising standards for media programs in schools and universities, evaluation of instructional materials and systems, definition and terminology, information sciences, legislation, instructional development, design of educational facilities, equipment, and materials, visual literacy, media and contractual negotiations, research in educational technology, certification and training of media personnel, telecommunications, urban education, and international projects.

Awards and Scholarships: AECT Memorial Scholarship of \$1,000 awarded annually for graduate AV study; joint AECT/EBE award for in-service education programs in K-12 institutions (11 awards—10 regional and 1 national); joint AECT/EBE award for in-service education program in college-level institution.

AUDIO VISUAL SERVICE COMMITTEE OF THE ASSOCIATION OF NATIONAL ADVERTISERS, INC.

Office: 155 E. 44th St., New York, N.Y. 10017

Officers: Peter W. Allport, president; William D. Kistler, Vice President; Anthon C. Lunt, Administrative Secretary, Audio-Visual Service Committee.

October evening showing of top winning films and presentation of awards to representatives of sponsors and/or producers (during the National Safety Congress and Exposition in Chicago, Ill.).

THE NATIONAL VISUAL COMMUNICATIONS ASSOCIATION, INC.

Offices: Suite 1236A, 230 Park Ave., New York, N.Y. 10017. Phone: (212) 686-4704.

National Officers: Gordon Reynolds (Modern Talking Picture Service), President; Arthur Rubin (Polymedia), Vice-President; Quentin Farvell, Secretary.

Purpose: To advance and encourage the most effective use of visuals to promote better communications in industry, business, education and government. To increase the prestige of the visual communications specialist by adherence to the highest ethical standards.

Annual Awards Competition: Deadline for the entries will be one month prior to "Days of Visuals" Program. Scheduled for Dec. 2-3, 1971. The awards will be presented at the Awards Banquet in New York City at the New York Hilton.

Meetings: Monthly luncheon meetings featuring presentations of specialized audiovisual topics, September through June, in New York and Chicago. Visitors welcome.

THE SOCIETY OF MOTION PICTURE AND TELEVISION ENGINEERS

Headquarters: 9 East 41st Street, New York, N.Y. 10017

Officers: Wilton R. Holm (Assoc. of Motion Picture & TV Prod.), President; Byron S. Goudabush (Byron Motion Pictures, Inc.), Executive Vice President; Deane R. White (E. I. du Pont de Nemours & Co.), Past President; Wm. T. Wintringham (Consultant), Engineering Vice President; Richard E. Putnam (General Electric), Editorial Vice President; Kenneth M. Mason (Eastman Kodak), Financial Vice President; Harry Teitelbaum (Hollywood Film Co.), Conference Vice President; Wm. D. Hedden (Calvin Communications, Inc.), Sections Vice President; Herbert E. Farmer (University of Southern Calif.), Vice President for Educational Affairs; Carlos H. Palmer, Vice President for Photo-Instrumentation; Edward H. Reichard (Consolidated Film Industries), Vice President for Motion Picture Affairs; Roderick T. Ryan (Eastman Kodak), Vice President for Photo-Science Affairs; K. Blair Benson (CBS Television Network), Vice President for Television Affairs; E. B. McCreel, Secretary; Joseph T. Dougherty, Treasurer.

Conferences: 111th Technical Conference and Equipment Exhibit, Apr. 16-21, 1972, New York Hilton, New York. 112th Technical Conference and Equipment Exhibit, Oct. 22-27, 1972, Century Plaza Hotel, Los Angeles.

UNIVERSITY FILM FOUNDATION, INC.

Office (of the President): O. S. (Steve) Knudsen, 121 Pearson Hall, Iowa State University, Ames, Iowa 50010.

Officers: O. S. Knudsen (Iowa State Univ.), President; John Flory (Eastman Kodak Co.), Vice-President; Herbert E. Farmer (Univ. of So. Calif.), Secretary; J. E. Oglesby (Virginia State Board of Education), Treasurer.

Purpose: This Foundation is a tax-exempt, non-profit corporation established to raise endowment; handle research contracts; and facilitate fellowship and scholarship programs.

THE UNIVERSITY FILM ASSOCIATION

Office (of the President): J. B. Watson, Jr., Office of Instructional Services Dartmouth College, Hanover, N.H. 03755.

Officers: J. B. Watson, Jr. (Dartmouth College), President; Lauren Cocking (Southern Illinois University), Executive Vice President; Robert W. Wagner (Ohio State University), Editorial Vice President; Richard A. Sanderson (Univ. of Hawaii), Conference Vice President; J. Sol Wrenn, Jr. (Virginia State Board of Education), Treasurer; J. Dennis Lynch (University of Kansas), Secretary; Ernest D. Rose (Temple University), Past President.

Annual Conference: 26th Annual Conference will be held August 19-24, 1972, at Univ. of Washington, John Driscoll, Program Chairman.

8mm is our Image.

Our Super 8 specialists can save you time and money. No sub-contracting because we do it all: 35mm and 16mm reduction printing with effects, quantity printing, magnetic or optical sound and silent, cartridgeing, exclusive cartridge lubing with No-En and Vacuumate film protection.

For capabilities brochure and price list write Hollywood Valley Film Lab, 2704 West Olive, Burbank, California 91505, or phone (213) 846-7262.

A filmmaker's journey through purgatory

(From Attica to now)

BY LEE R. BOBKER

For a period of six years, from 1965 to 1971, the American Foundation through its Institute of Corrections made it possible for this filmmaker to research, write, direct, and produce a series of documentary films dealing with our correctional system. It was, to say the least, a difficult and sobering experience. The problems that finally led to the tragedy of Attica were only too obvious and the reluctance of society to directly confront those problems was also quite clear. No normally intelligent person possessed of average powers of observation could fail to see where we were headed, for Attica is the mirror of the system—exposing in a single blinding moment of illumination our total failure to deal with the complex problems of crime and punishment.

During the intense research period made possible by the generosity and vision of the client, Mrs. Nellie Lee Bok, president of The American Foundation and one of the great human beings of our time, and Frank Loveland, that rarest of people—a true visionary, I was exposed in depth to two interesting phenomena. One, a field in which the experts (both academicians and pragmatists) admit to total failure and

yet for the most part refuse to even make a start on any truly innovative approach. To be sure, there are many dedicated and thoughtful men and women who within the existing system are attempting to create change by such programs as work release, open institutions, intensive therapy, etc., but these are in essence simply efforts to improve our prisons. The opportunity of working on these films brought me into contact with just about all the top people in the field and rarely did I encounter any serious effort to scrap the entire concept of "prison" and start from scratch on something new.

Somehow an air of defeat and pessimism hangs over the entire field. Those who have genuine dedication, genuine insight and genuinely new innovative ideas despair of ever seeing them adopted. Those like our Attorney General (Mitchell), our Governor (Rockefeller) and the director of the FBI (guess who) still cling to the notion that what we need is more prisons, more guards and harsher, more repressive treatment. This latter group is, of course, where the power lies. As a filmmaker of some reputation, I had no difficulty talking with anyone, but after the usual lip service to "pro-

gress", it was difficult to find any really interesting real live examples of something new.

During the research and during the actual filming, in over 50 major and minor institutions and jails and penitentiaries all over the U.S.A., what was seen and experienced was appalling. As a filmmaker, I have spent a fair portion of my life in the desperate places of this world. I am not squeamish nor easily shocked. Slums, hospitals and mental institutions can be barbaric, but the conditions inside our jails and prisons defy belief.

Here was a "sponsored film" project that really made a substantive contribution to the society. We anticipated Attica. The first film in the series *The Odds Against*, won 10 major awards including a nomination for an Academy Award. These helped it be seen by millions of Americans and influenced several state legislatures to pause and think before blithely appropriating more money for bigger and better prisons. This film provides an overview of the system as seen through the blighted life of a single

Lee R. Bobker is president of Visio Associates, New York.

offender. The next two, *The Price of Life* (probation), and *The Revolving Door* (jails and the lower courts) were similarly received.

The shadow of Attica was upon the screen for everyone to see. Some of the images were too revealing to be believed. A solitary confinement cell the size of a closet housing 8 naked blacks whose worst infraction was that they were "slow" in responding to wake-up call, filth, disease, sadistic behavior on the part of guards, and other niceties too numerous to list here. The films did their job—they really shocked many people and aroused them—this was film sponsorship at its very best. And yet, we still moved toward Attica with an inevitability that would have made the Greeks blush. Why?

Because the role film can play in helping us recognize and confront our social problems is as yet unrealized. The large corporations are beginning to discover that one important documentary film can do more for their company and its product than all the "industrial" in the world . . . and that TV commercials are not always the best or most effective way to exercise corporate citizenship". Despite this,

almost no one yet is giving the kind of support to this type of film that would extend their impact on the public and their ability to really change the world.

Attica "happened" because too many did too little. We really didn't want to face up to the grim fact that after 200 years we still haven't the foggiest notion of how to deal with those who commit offenses against society. Lulled to torpor and apathy by the empty words and barren voices of our President, Vice President and Attorney General, we took the easy road—and paid a price we could scarcely afford. The films Vision made on our prisons were among other excellent films on this subject and they failed to encourage us to seek other ways.

Our experience inside these prisons (Attica included) provided first hand, unarguable evidence that a bad system is deteriorating into a wholly repressive one when human dignity and worth are as forgotten as they were at Buchenwald, Dachau, and Auschwitz. Today, with the help of those business leaders who really care, the filmmaker will continue to press for support (production and distribution) for films that can change a small portion of tomorrow.

row. Attica can best be remembered in the words of an unnamed convict who died in a prison after being beaten by a guard and kept in a black chamber the size of a broom closet for 10 days . . .

" . . . my life inside these walls has taught me only that men are not noble . . . they are not compassionate and they do not seek to understand . . . I came to this place hoping only to serve my time and never again return. But hope is one thing and this place is another—and now I think that it doesn't make any difference whether I live or die—believe me when I tell you I know what Hell looks like—pray for me . . ."

He was black, 21, and serving three to five years for breaking into a store and stealing \$33.00. He had been offered no training, no rehabilitation services, had been assaulted homosexually 13 times, had been denied visitors on 35 occasions and been in solitary for being too slow to move at a guard's command.

There are more films to make . . .

HOW NOW BROWN COW?

How fares the
industrial film in
the age of
"future shock"?

BY LOUIS MUCCIOLO

Louis Mucciolo, Communicator.
Henry Strauss Associates, New York.

Change 'brown cow' to 'industrial films' and today, that marshmallow soft question could explode up a provocative barrage of formula-shattering evaluations.

Should we finally bury industrial films? Are our audiences still with us? Is the film sponsor giving or taking? Are statisticized audience listings a valid measure of effectiveness? Is the producer meeting tomorrow—the sponsor?

The probable answer to *each* of the questions is yes, no, maybe, sometimes. The same kind of answers battered the complacency of our once-upon-a-dictatorial-time fashion industry. As well as many of the super-smugly confident labor leaders who suddenly lost control of *their* masses, and the vaunted politicians who are now not so certain of the youth vote, the donkey vote, the elephant vote, the left or the right. Suddenly, we have liberals *for* repressive action, conservatives *for* change and *all* people daring to clamor for their rights. Pulpits are befuddled, educators are ducking, patriotism is a farce, heroes a shrug, the moon a romantic flop and a plethora of traditional values are battling valiantly against an oozing oblivion in the quicksand of change.

What happened?—Who cut the reins?—Where did the norm go?—Why are they moving the numbers on the charts?

Perhaps it's a piece of "future shock," but it's also *our* audience! Changing people, not static numbers. Groups of individuals, not measured masses. They're part of the onrushing tomorrows which are clobbering our todays.

Like the general audience films that will appeal to all. Who is all? Well, if you take a composite of sponsors, "all" is personified by dollops and additives. A dollop of contemporary music, fast cuts and crazy angles—"for the youth, you know." Add a touch of historical background, integrity and experience—"that's important to a lot of mature people." Put a creative dollop handle on our diversification—"good for potential investors and the street analysts." Community involvement and anti-pollution expenditures—"everyone's interested in that today, it's a must!" "Do we have *all* the divisions represented?" "We ought to be able to get public TV for this, its going to be damned exciting" "A natural for schools—upper grades, I guess," etc., etc.

Sponsor trap? Sure, and many a producer falls right in. The final film is great, they say and it's shown to all. The numbers who see it are fabulous and the statistics *are* real. But, who *cares*? How many were motivated, how few did you really need to reach? Which *ones* did you touch?

The constancy of change, when coupled with today's highly accelerated obsolescence has threatened a new ball game—if you want to play. A film does not appeal to "all" and if we honestly understand our objective, it

is never made for all! Other media have learned and are still adjusting. The general magazine is being replaced by specific audience and category periodicals; trade mags have had a phenomenal growth; TV programs are targeted time-wise and region-wise; single concept films have proliferated in the schools; CCTV in industry abounds in specificity; CATV has channelized for special audiences and video cassettes are hovering on the horizon, taking dead aim at each fragment of our splintered audience. And don't forget industry's own visual outpourings in safety, training, product demos, sales and education—all extremely selective and localized.

So how now, brown cow? Perhaps the sponsor should try meeting tomorrow with *single audience—single objective* films in the vital fields of marketing, productivity, image, environment, multi-nationalism and social involvement. He should have research and sampling, as in other media, become a major element in the effort to truly identify and locate that specific objective and audience. Discard the numbers game and have effectiveness be related to reaching and motivating the fifty, five-hundred, or fifty thousand *individuals* who were selected because they might be involved. Yes, this may mean *more* films—shorter in length, more topical in content and more modest in budget, and far more meaningful in satisfying *real* needs.

"... the sponsor should try meeting tomorrow with single audience-single objective films"

Is that the end of the "numbers audience? NO, not for a while, but the numbers will be less and the picture will change.

Where the sponsor is ready to finally realize the self-serving mirror images of the past and is ready to *give*—there's a large, vitally interested audience awaiting. The *product-le* film that inspires awareness or promotes understanding, that examines values and offers alternatives, encourages involvement and is willing to philosophize—that one will bring greater returns from now on because of a stronger bond with a *concerned* viewer. But, here again, stay away from the traditional measurement syndromes! *These* returns will be characterized by a relationship of renewed credibility, mutual respect, joint social responsibility and a grudging

We are proud of the distinguished companies we serve and we're extending an invitation to you to join them.

RHR Filmedia, Inc., is a full-service film distribution organization serving a diversified list of clients. We would like to introduce you to some of them, including such giants as **Ciba-Geigy Corporation** and **Atlantic Richfield Company**, both of whom have placed theatre distribution programs with us.

Representative of a more modest-sized client is **Ausable Chasm Company**. We are serving their film distribution needs in theatres, television and 16mm audiences.

Trade associations such as the **American Petroleum Institute** (two titles in theatre distribution) and the **Tea Council of the United States, Inc.** (three titles, one in theatres, one in television, and one aimed exclusively at women's groups) have appointed us their film distributor.

Such leaders in their fields as **Hyston Fibers**, **Cover Girl Division of Noxell Corporation**, and **Lenox, Inc.**, have placed theatre programs with us.

Our governmental sponsors include the **State of South Carolina** and the **Saratoga-Warren Counties Promotion Committee** (New York State).

L & M Cigarettes have given us a large print program aimed exclusively at adult

audiences on **Formula A/5000 Road Racing**.

We are also serving as the **Knights of Columbus Film Library**, and we are proud to announce that their new film (200 prints) has already been booked to 163 television stations in one month on a crash basis with 16mm audience circulation to start immediately thereafter.

And we are extremely proud to announce that we have been appointed by **American Telephone & Telegraph Company** (actually ten Bell System companies) to handle their television distribution with 18 pictures to start.

We could tell you more, but what we are trying to say is that whether you are big or small, corporate or trade, governmental or whatever, we're sure we can handle your film program for you. Our dedication is that each program should be handled as if we were the client's own internal film operation. So, if you presently have a film distributor, or handle your own, or you have ever had any second thoughts about film distribution, why not take a few more seconds to contact us? We'll answer your questions, and maybe put you in some distinguished company at the same time,

Your Films Are Our Business

RHR FILMEDIA, INC., SUITE 1806, 1270 Avenue of the Americas, New York, N.Y. 10020
212 541-9692 Richard H. Rogers, President

growing belief that you, the sponsor, also care.

Where does all this leave our galloping film producer and how does he tilt with tomorrow? Well, for a beginning, he had better start probing his client more and accepting him at face value a lot less. Dig deeper into the sponsor's articulate surface exposition and creatively explore the interacting elements—problem to need, need to objective, objective to audience, audience to motivation, motivation back to problem—take lots of time up front and search out the keys that can open. It may be contentious, but make sure that the involved internal levels of sponsorship have *all* agreed upon the objective and target audience.

"Zero population growth, down with mink, who needs diamonds, junk the rat race, treasure-out the trash, hold everything, up the rebels, and who needs it!" You can hear the clamor of changes, so go ahead and convince the client. Once accepted stimuli no longer trigger automatic responses and many of our fondest infallible formulas have already felt the freeze-out breath of incredibility.

There will be times when you have to fight a little harder against making the kind of picture the client wants, the style he wants, the length he wants. But, don't fall into your own "ego trip" trap. Use that excess energy of conviction to add depth and perspective to the film's main ingredient—content!

Start a new trend of creativity, that of achievement through highly imaginative simplicity. Today's fantastic pyrotechnic embroidery has a place—once in a while—but it's getting mighty suspect, especially from overkill. To many, it has already achieved the qualified distinction of a contemporary cliché.

As the last credits over the freeze frame fades flickeringly off the screen, the soft murmurings of both sponsors and producers seem to blend and say that this is what they *have* been doing all along. Have you?—Consciously?

Industry's own version of a changing life style is being fueled by the financial squeeze, the need to examine alternatives and a wary but intense search to locate its own positioning within the spinning orbit of social change. Meaningful awareness of *present shock*, skillfully combined with the harsh reality of bullseye performance is what *effective* visual communications is going to be all about!

SELL WITH MOVIES

Movies can cost less! Why use slide films?

Your salesmen can present your product in a far more dramatic way with a movie and the MPO Videotronic Super 8

— new portable sound and color movie projector. No threading, no rewinding, cartridge load. Built-in screen, instant conversion to big wall picture. Light weight, folds to briefcase size. Uses standard Eastman Super 8 sound film. We'll make new movie for you cheaper than a slide film — or reduce your films. We

load, ship, service, guarantee. One-stop service. Low cost lease, purchase plans, even trade-ins!

Our plastic reels, cans and cases all landed major Hollywood roles.

(And our brother-in-law isn't even a producer.)

A number of major Hollywood studios are using
Plio-Magic plastic reels, cans and cases. Almost
exclusively.

Why? Because our Plio-Magic plastic protects better
than metal. Highly resilient, it can withstand impact that
metal can't. There's no bending. No denting. No
damaged film.

Hollywood liked that.

They also liked our four positive locks. To keep the
cases securely closed. And our foam packing. To keep
the reels from rattling.

Hollywood, you might say, has gone plastic. Can the
rest of the country be far behind?

We make a complete line of quality accessories for
film handling. Write us for our catalog.
Plastic Reel Corporation of America,
640 So. Commercial Ave., Carlstadt, N.J. 07072.

PLIO-MAGIC®

Someday, you'll wind up with plastic.

Which way for the environment film: useful public service, or scary sensationalism?

BY STUART FINLEY

Not every film we see on the screen today is as honest as it ought to be. In fact, deliberate distortion is sometimes injected into sponsored films intended to sell a product or an idea. This could be called relatively harmless since the viewer can usually detect the bias easily. But a more subtle and dangerous form of dishonesty can be built into a documentary film when it fails to come to grips with its subject matter substantively. These films or television programs can seriously mislead their audiences and are often counter-productive to the public interest and eventually to the interests of the sponsor.

"... America is not really going to hell in a handbasket."

Environmental films are susceptible to this kind of dishonesty. The subject area is complex, and when script research is casual, the film may point in all sorts of false directions. Sometimes, the sponsor's and the producer's tendency is to take the easy road and produce "scare" films. These can be sensational and fascinating to the uninitiated, particularly susceptible school children. Even older students seem to seek this material in today's perverse mood of discontent. The question that everyone concerned with ecological problems should face is: What should an environmental documentary say? What should its editorial policy be? What should it try to achieve?

After seventeen years of film-making in the area of environmental matters, I have some firm opinions. These are my criteria:

- Is the film useful and helpful?
- Does the viewer learn more about the subject?
- Is the subject presented in true perspective?

- Will an interlock with recognized authorities substantiate the film in a general way and in every word of the script?
- Is it an honest representation of the subject?
- Does it avoid unjustifiable emotionality?
- Is it showmanly, visual, concisely written, and easy to watch without nodding off to sleep?

The typical client for an environmental film is a government agency. Usually, the public affairs official wants to stimulate public interest and action but avoid extreme negativism which can result in dispirited lethargy

or even a nihilistic attitude. Producing a film for such a client is like walking a tightrope. If you lean too far to either side, you'll tumble. The solution is quite simple. Immerse yourself in the substance of the problems and solutions involved and withdraw from general policy considerations. These should become inherent in the total presentation. In other words—inform, don't caterwaul.

The subject matter available is endless, if you take the trouble to ferret it out. Here are some current subjects we're filming:

- General Electric's newly developed vortex incinerator which promises to reduce the volume of municipal wastes dramatically without creating air pollution because of its new high temperature combustion process;
- Bell and Howell's imaginative packaging processes which will diminish the creation of solid waste in manufacturing by clever application of the principles of reuse recovery;

- Armco's award winning steel waste water recovery system at Middletown, Ohio plant;
- Dow Chemical's ingenious automated effluent monitoring and control system at its complex of plants at Midland, Michigan;
- Tahoe's interesting lash-up of existing previously-proved sewage treatment technology into an effective treatment system.
- The new UNOX system for hypoxic sewage treatment employing long-known but little-used basic principles;
- The Environmental Protection Agency's new and successful rural solid waste collection system developed by Chilton County, Alabama;
- And so on and on. . . .

The point is that when you mix this material in with burning dumps, outfalls, and stack emissions, you can develop a balanced story which relates urgent contemporary problems to significant current progress. The viewer can watch and be motivated to participate without being crushed by an avalanche of seemingly overwhelming difficulties.

What I am really saying is that while we have a huge and troubling conglomeration of environmental problems today, America is not really going to hell in a handbasket. This is the reason I just stall when people call to buy stock footage of sewage discharges, fishkills, and other negative manifestations.

Sometimes you can't find the right client for an environmental film idea. Our solution is to produce it anyway for distribution. Back in 1966, our cinematographer, Ted Jones, became fascinated with the subject of solid waste management and conceived "The Third Pollution". This was the first comprehensive film ever made on this subject. It went to the Edinburgh Film Festival and won six other major awards. Today, there are five hundred

Two sides to the environment story:

Solid waste disposal problem is exemplified by a line of trucks waiting to enter the Oxon Cove Landfill at Washington, D.C.

Pilot plant of fluidized bed incinerator at West Virginia University designed to burn solid wastes. A full-scale reactor such as this is now operating at Franklin, Ohio.

Stuart Finley, president of Stuart Finley, Inc., Falls Church, Va., has been a leading producer in the environmental film field for the past 17 years.

prints in circulation and we have produced ten other films on various aspects of solid waste for the U.S. Environmental Protection Agency and other organizations. This total effort which now has several thousand prints in circulation has begun to have a real effect in this environmental problem area. Our current effort now in production on water quality management is another unsponsored film designed to make as much impact as possible to support water pollution control programs.

The process of contacting the public is you sell and rent prints to schools, colleges, libraries, government agen-

cies and private organizations is most revealing. The letters and phone calls zero in on what the public wants and needs. Perhaps you'd be interested in one letter from a young student in California:

Dear Sirs:

I am very worried about drinking dirty water. I know that it hurts my health. What are you doing about it? Also, what can I do to help? The reason that I am interested in this subject is that I don't want to die soon because of polluted water. Will you please write back and in your letter tell me the statistics and all of the things that you are discussing at Stuart Finley,

Incorporated. I, for one, don't want to die soon because of this water pollution problem.

*Sincerely Your,
Robert Schell*

I haven't answered the letter yet because the only way I know how is to produce that film and send him a print.

Perhaps the soundest guidance I've ever had on the philosophy of environmental film production has come from my E. P. A. Solid Waste Project Officer, Ralph Black. He keeps saying: "Just tell it like it is!"

How to keep your film library working harder

Have you ever wondered how a medical specialist prepares himself to perform a delicate operation that is seldom required? Or, how the medical schools and large hospitals are able to impart such specialized techniques to their interns and specialists? A pharmaceutical manufacturer in New Brunswick, New Jersey holds one answer.

Smith, Miller & Patch Inc. has compiled a film library of classic eye, ear, nose and throat operations which they make available at no charge to the medical community. Much of the use is by medical schools, universities and medical centers for the education of students, interns and the updating of technique by doctors.

A growing collection of 16mm prints is maintained by Smith, Miller & Patch (SM&P) in New Brunswick. There are over 130 different films on ophthalmology, or diseases of the eye, and another 90 or so on otolaryngology, the ear, nose and throat sector. During peak months, 600 or more films are sent out world-wide for a use rate of about 7,000 showings annually.

Each of the different operations on film has been performed by doctors who are known and respected for their technique and capability. They obtain all releases from the patients

and institutions involved and donate the film to Smith, Miller & Patch. Often the doctors do their own commentary during the operation, or have the sound track dubbed in later. The films are always in color. Each one is edited and then prints are made by SM&P, placed in the library and added to the list of available operations. Very often, E. William Smith, Director of Public Relations of Smith, Miller & Patch institutes the request for a specific operation and works with the doctor from the inception of the idea until the prints are "on the shelf" and ready for distribution to the medical community. The doctors are well aware of the enhanced reputation and publicity which they receive from this broad exposure among their peers.

When a school, a doctor, or even a Smith, Miller & Patch field contact man is in need of a specific film, they contact the New Brunswick film library office. Mr. Smith and his staff police and control the many prints which are in use world-wide. An air freight forwarder, Emery Air Freight, is an integral part of this distribution system.

The transportation of these films is a story in itself. Even with upwards of 5 or 6 copies of the more popular films, SM&P has problems in keeping

up with the great demand. Emery is used exclusively for the transport of these films in order to maximize their use and to minimize the time spent in transit. Transportation is further complicated by the fact that many of the destinations are far removed from major commercial airports. Absolute transportation control is mandatory and Emery's EMCON computer control system provides this information. Close monitoring is essential when the films are relayed from point to point without being brought back to New Brunswick.

Smith, Miller & Patch is dealing primarily with medical people, educators and other professionals, who are seldom involved in the shipping and receiving of goods. For this reason they issue complete shipping instructions for each segment. Not only are the doctors and technicians told just what to do and when to do it, but they are provided with their local Emery telephone number and a prepared Emery waybill. The result is that shipping compliance is remarkably good and each film copy is kept under control.

Another reason for Emery's use is its world-wide net of offices. The films are circulated widely overseas and the 30 Emery-manned overseas locations provide a necessary link in shipping and retrieving the films. North America, Emery's 68 offices and over 100 agents place an Emery office at every key airport or transit point.

The basic story is one of need and communications. The medical schools, hospitals and individual doctors are receiving priceless information free when they need it and want it. The information is most graphically presented and there is very little question that the availability of the films has saved many lives. It has undoubtedly improved the operative technique of doctors all over the world and has very clearly illustrated the point that today's improved communications links make us all better educated and better people. The information explosion in a critical medical area is a bang, thanks to this New Brunswick pharmaceutical manufacturer. It would have been only a mope without them and E. William Smith.

E. William Smith behind the camera during filming of eye operation for Smith, Miller & Patch surgical production.

The Latest In Aircraft Footage For Your Film

Footage from a most comprehensive aircraft stock shot library is now available to professional film and television producers free of royalty. Most of the shots were made on 35mm Eastmancolor which can be made available in 35mm or 16mm, color or black and white.

A Good Prostitute Pays Off— And Many Other Things

BY GENE STARBECKER

You are on a film assignment overseas. Your crew is in quarantine. How can you get them out to keep on schedule? You've just learned your exposed film may have been inspected by x-ray. Now what? The plane you are on is going to make a refueling stop in Red China. No one, not even the official translator, can speak the dialect of the villagers of a North Taiwan fishing village and you need a bare breasted woman nursing a child. How do you explain? And the ransom note you've just received says it will cost you \$30,000 to get your crew and equipment back safely from Ethiopian bandits and all you have are credit cards. Impossible situations? Could never happen in a million years? Yet, hardly a week goes by that a camera crew working somewhere in the world isn't faced with problems equally perplexing and that could prove costly to the film maker who hasn't planned ahead for the unforeseen. After sixteen years of shooting in more than forty countries, here are a few tips that a film maker planning his first or fifteenth foreign production might find useful.

Check Itineraries

At most production houses, when a contract comes in with foreign locations, everyone waits to see if he'll be the one to go on the assignment. Often in small companies the producer, the client, and the producer's star salesman, eyeing this as a paid vacation, decide to shoot this one themselves, taking their wives along as assistants. More often than not their efforts are no better than the average home movie of their trip, revealing their emphasis

was on the vacation. Itineraries for this type of film are no problem and are adjusted to the number of sights and cities the vacationers plan to see. Filming is only incidental. Since a profit is not always essential, the planning of an itinerary is no problem. It is adjusted to the number of sights and cities the vacationers plan to see. The camera is taken out of its case as something of interest comes up.

However, Where the aim is to make money, and quality is a prerequisite, successful producers, big and small, usually send competent professionals—seasoned in world travel—out specifically to shoot the film and get back. To keep crew costs down, itineraries are carefully planned to get crews to and from locations expeditiously. However, most planners make no allowances for the effect of the biological clock on the working efficiency of the crew. Not being acquainted with culture or customs of a given country, such planners often underestimate the hours needed, especially if photography involves working closely with foreign nationals or officials who accept protocol delays as a way of life.

If the client specifies the areas he wants included, make sure he knows the exact locations so they can be pinpointed. More likely than not, you'll find that he has never been there and only has a second-hand knowledge of a location. The actual site could be anywhere from thirty miles to three hundred miles away from the city he indicates, possibly requiring you to

trek with a safari on foot. Suburbia does not ring most foreign cities, only jungle, sand dunes, or jagged peaks greet you past the city limits. Accurate advance knowledge of locations will let you estimate fully. The lack of knowledge will give you an opportunity to write a contingency clause in your contract to cover delays, inconvenience, etc. On a recent assignment for a government agency the producer estimated travel time for his crew based on information given him that a nuclear plant to be photographed was 150 miles from the nearest city. No detail maps existed. An estimated four hour trek by car turned out to be ten hours of fording rivers, traversing ridges, and circumventing cattle and thousands of people repairing the washed out road by hand. The time up and back added two days to schedule, fouling up the remainder of itinerary. Forcing crews to travel all night to other locations to catch up. Always allow for travel time and for biological clocks to adjust. Cameramen pressed to their limit of physical endurance have been known to become accident prone or develop eye strain. Try explaining why the Taj Mahal won't stay in focus.

Hair Cuts

Many countries will not permit camera crews with shoulder length hair unless the producer posts a bond and guarantees to pay return flight to the U.S. for the person.

There are too many college dro

Gene Starbecker's company, Starbecker Inc. provides script preparation and directional and production services to U.S. film producers and number of government agencies, and private American and international corporations.

outs, armed with 8 mm equipment and calling themselves film makers, who are knocking around the world. Most become vagrants, and ruffle feathers by documenting brothels, etc., in hopes of coming up with the exposé of a lifetime.

Long haired cameramen have been required to get hair cuts before visas would be granted, or before they would be permitted to enter a country. Greece, India, and Japan are sticklers about this.

All film people are suspected drug users. Make sure crew members do not unwittingly detain the entire crew because of their indiscretion. Italy is extremely hard on suspected drug offenders, keeping suspects in jail a year before prosecuting.

If a film attaché from the host country is assigned to monitor shooting—do not disregard his orders. A British crew recently had their film confiscated and were escorted out of India because one of the crew members, on his free time, photographed 1,000 feet of his own film on conditions the government representatives said could not be covered. Even though the producer tried to explain that the man did this on his own and his footage had nothing to do with the subject matter of their sponsored film, the visas were cancelled for the entire crew.

On many assignments, producers may find it better to enter as tourists rather than as film makers. Many tourists own professional gear. By giving a case or two to each crew member, you can often avoid a zealous customs agent from questioning the cartloads of camera gear as possible import goods you really intend to sell before you leave.

To Reply or Not to Reply: That is the Question

If your client is prone to send dispatches, beware. This is especially true if the U.S. government is involved and the assignment requires filming in numerous countries—be prepared to be besieged with cables. Even though informed of your visit, almost every Embassy will request clarification on some minor matter. Each will request a reply. More often than not, you will not have access to diplomatic communication services to comply. The average cost of a cable runs about \$60. On the last assignment, cables sent by a producer during a four week period cost \$1,700—a figure he never anticipated spending. Ironically, more than half of the cables never were received by the people requesting them. Therefore, no one was prepared to assist when the crews actually arrived.

In planning schedules don't believe

everything you're told by enthusiastic clients and sincere sounding officials of our government that U.S. Embassy people in a particular country will assist you. If they do, it will more than likely be only perfunctory help. Chances are the day that you arrive will be a national holiday of some sort in that country and Embassy people are honoring that holiday. If it's a Friday—you will discover, as a rule, that's the week the guy who was going to pave the way for you has taken a long week-end, annual leave, sick leave, or better still, R & R Stateside.

Don't rely on the Embassy in an emergency either. More than likely it will be a national holiday in the States, and they'll be off celebrating that, too.

A call to American Express, any airline ticket agent, or a local English newspaper will find a sympathetic ear. And usually someone resourceful enough to assist. If not, they'll put you in touch with someone who can help.

Preventive Medicine

Regardless of where you are scheduled to shoot, have every member of the crew get more than the required inoculations. In this jet age in which we travel, an unscheduled landing because of malfunction, hijacking, sudden outbreak of war, can create prob-

"She said we opened a new career for her and that it was the easiest money she had made in years"

lems. Flying last winter from Rome to Teheran, the pilot informed us the field there was closed because of snow. The airport could not shovel enough off the runway in time for our jumbo jet to land. The pilot's decision was to go on to his next destination, which was Karachi, 1,500 miles away. Cholera was rampant. Camera crew and passengers were kept in quarantine for a week. Only those with immunization cards certifying they were inoculated were permitted to fly back to Teheran two days later when the runway was cleared. Local health regulations stated no one could leave the area without immunization. No doctors were available to give shots.

Transportation

As for ground transportation, most producers rent a station wagon, van, or lorry to carry crew and equipment. They have arranged for similar vehicles without difficulty numerous times in the U.S. However, the amount of time spent arranging for a car, making reservations, verifying rates, etc., in other countries, is considerable. Invariably upon arrival at a foreign location, whether they "try harder" or are "No. 1", no vehicle or the wrong vehicle has been reserved. And the fact that you say it has been reserved, and have a confirming copy, only creates delays as they try to locate their copy of said confirmation . . . leaving you standing there while a fellow passenger without a reservation has arranged for a rented car immediately. Except during the peak travel season in the country you are in, one of the larger car rental firms will have what you want. I've rented cars in Germany and dropped them off in Italy without paying a drop-off charge, saving air fares for producers—plus getting additional scenes we happened upon.

Don't be surprised if some countries require that you hire a driver when you rent a car. You must rent a chauffeur with the car in India. If you do, make sure he speaks English and the dialect of the part of the country you'll be filming in. In some South American countries this is true, too. Most drivers you'll hire will know the answers to the stock questions most tourists ask trying to size up a driver's fluency in a language. The drivers have the answers to these questions down pat. But ask them anything else, after you're on the way, and all you get is a blank stare, "Si", or "no comprendo."

A Good Prostitute Pays Off

If your client's foreign branch office or the U.S. Embassy promises to assign a translator, make sure he speaks English plus the official language of the land and the dialect of the region you are to visit.

Filming in North Taiwan last year, I discovered that my cameraman, who was born in Peking, could not communicate with the translator in English or Mandarin. And the translator could not talk to peasants in the village since they spoke a dialect little heard of outside their province. To keep on schedule, I wound up hiring a prostitute who was soliciting her wares to crew, translator, and bystanders. She was able to speak fluently to our camera crew in English, the interpreter in Mandarin and the villagers in the local dialect. When asked how she learned to speak so many languages and dialects, she'd wink and state, "You learn many things in bed." For several weeks she was the producer's and my greatest asset. She "honchoed" everything. When we left, she said we opened a new career for her and that it was the easiest money she had made in years.

Film

Since hijacking has become so popular, the FAA and their international equivalents have been checking luggage for arms and explosives. Therefore, protect your raw stock. Label the outside of film cases in English, French and German. If you can get a translation for the locality you are to visit, stamp that on gaffer's tape and place on the sides of cases.

Although most airline officials will tell you the method of detection being used is electronic or magnetic, double-check. Make sure everyone is aware that you carry unexposed or exposed film that should not be subjected to x-ray or infra-red, or ultraviolet light. I have watched British and French camera crews panic at an airport in Germany when their exposed film was subjected to x-ray examination, ruining 40,000 feet of exposed film. Many detection devices play havoc with magnetic tape, too.

Always have raw stock from the States sent to you at local Eastman Kodak offices. Never count on picking up film stock of the same type from foreign producers. Emulsions used regularly in the States have not been introduced as yet in Europe, Asia, Australia, or Japan.

How You Gonna Keep Them Down on the Farm

Make sure personalities are compatible on longer assignments. If you're taking your own staff along, keep in mind that even your own staff people may surprise you. People change in different environments. That reserved member of your staff at home may suddenly, kick the traces on this assignment. Make sure all crew members know the call for the following day. Don't assume a memo slipped under their door is sufficient.

While shooting a travel film in the Caribbean for a steamship company the producer discovered one of the soundmen never got the word. He missed the morning call five days in a row, even though they were left in his box or slipped under his door. A ship full of widows and school teachers had proved too tempting. If a romance blossomed, he spent the night. I wound up paying a ship's steward to keep me advised of his whereabouts. We saw to it the steward got him up wherever he was. It didn't cut into his sex life and didn't hold up production.

See that inexperienced crew members get time off to sightsee; that way they won't be trying to do it during shooting time. Week-ends spent on this help morale and reduces the overtime.

The Other Guy

Somehow cameras attract people. Some curious, some for other reasons. Make sure the camera crew doesn't create problems that will add to your costs. While shooting street scenes in Rome, people started to crowd around a second unit cameraman. He told on man elbowing him to stand over to the side, and physically moved the man to a spot under a lamp post out of his way. Four hours later when we "wrapped" in the area, the man came up to the cameraman and inquired "When are you going to use me Soon?" The cameraman, forgetting the earlier incident, was perplexed. "What are you talking about?" The man replied, "You told me to stand over there and I did as you said. I was on my way to work, and you told me to stand there. I thought I was in the movie. Since I lost time at work—you'll have to pay me." Emotions flared, a disturbance followed. Before the police brought things under control, two hours were lost in the production.

schedule. The producer was forced to "pay off" the man to get rid of him. Always work with local police to control crowds. They make excellent casting directors when you need extras. One toot on a whistle and a wave of the index finger brings them on the run.

Thefts, Etc.,

Make sure all your insurance policies cover you in foreign countries. Some automobile policies exclude Mexico and certain Latin American countries. If governments are unstable and civil war is a possibility, check and make sure there are no war limitations on life insurance, camera gear, etc. Several companies will insure an entire production, including film, for damage because of humidity or temperature changes. This is important on an assignment at the South Pole, the Congo, and Southeast Asia. Make sure you are covered for theft. Most premiums are based on a nominal percentage of the film budget.

Highwaymen are still prevalent in many countries. A camera crew shooting a TV special in Ethiopia was recently kidnapped and held for ransom by bandits. Most countries will assign soldiers to you for your protection. Always notify local police and the U.S. consulate immediately. If authorities

feel it is advisable, pay the ransom—especially if you want to work with that crew again. Your bank, no doubt, has a working arrangement with local banks and can have a draft sent to them by dispatch.

Food and Such That No One Tells You About

Check on food and drinking water in many areas. You may not always be at posh hotels catering to tourists from America. Often you will be in remote hamlets and the guest of local chieftans or inhabitants. Dining can be a problem. It may be discourteous to refuse—yet more so if you accept and then cannot eat their food.

As a guest recently of the Nationalist Chinese, a camera crew I worked with had to eat duck's webbed feet, pig bladders, and a broth made from old bird's nest—bird droppings and all. Most enjoyed the food, until they inquired about what they were eating. In case you are interested, the word in Chinese is "Ngo shao ngo bao ti sufu" for "I think I am getting sick."

Regardless of country, if you are told by health authorities not to eat native food or drink water, don't. Diarrhea and hepatitis play havoc with film crews. More so than V.D. People in many lands do not have the same

sanitary standards that Americans and Europeans are used to so intestinal bugs can be picked up easily. Avoid "down time" by eating "Space Sticks" (high energy candy bars), vitamin pills, and charcoal tablets. The first supplies nourishment, the second vitality, the third stops the diarrhea. In India, coconuts are a good staple. If you can't eat at a hotel or have access to bottled water, a quick slice with a machete and you have liquid and meat until you can get to a safe food supply.

Film Expertise

Don't assume you know it all if you have dealings with foreign film makers. They have seen a good many of you come down the pike. Most are interested in being your subcontractor supplying crews, etc., and will be cooperative. Check their samples—many may be more qualified than yourself. Many have worked on features you still dream of making. Many have more sophisticated equipment than you use. The Japanese, for example, have a larger film industry than ours with excellent crews that work extremely fast. Even the newly-developing countries have sound stages and a large pool of talent, both English speaking and native.

A GOOD PROSTITUTE continued

If you want stock footage—and you may, for example, need seasonal scenes, but you're there at the wrong time of year—be sure you determine the film stock used as original before ordering scenes. Different methods of printing are in use in various parts of the world. Footages are measured in metric units in many areas.

Remember, if your intent is to make a good film, travel "know-how" can save you headaches. If your staff doesn't have it, it may pay to obtain it from free-lance people who do—for the time you need it.

If you have specific questions and problems, there are film consultants, such as my company, that have working arrangements in most countries with film groups and can help you line up cameramen, producers, studios, and talent.

The fewer the inconveniences, the less the headaches, the more time you can spend capturing the subject matter you've been sent to get on film.

So, if you've got a film assignment pending somewhere on the globe or one soon to get off the ground, file these tips away. They'll save you heartaches, ulcers, and money.

Plan ahead.

Expect the unexpected.

Do what you have to do for the sake of your production. But remember you are a guest in a foreign land. Leave with goodwill. There will be other camera crews coming along after you.

Never judge the ability of local production talent by the prices you negotiate. Most prices are based on their economy and the standard of living in that area. Boast of what crews get in New York and Hollywood, and you'll be paying those same prices next time you come. Although it's nice every once in a while to be a big spender—it may boomerang. This is what happened in Spain and other areas of Europe. Production costs have spiraled drastically as personnel became accustomed to American spending practices. Even so, I know of several areas where you can get trained production crews of seven men and equipment for as little as \$100 a day.

Interesting? But what has this to do with actual film making? Ask any travel-weary film maker or designer required to meet commitments and air schedules on a multi-stop junket around the world? Better still find out first hand.

The camera you hold in your hand the viewfinder you peer through, the script you are presently doing research on is your passport to many, many worlds.

Background: Founded in 1911 (as "The YMCA Motion Picture Bureau", a division of the International Committee of the YMCA's). As association films was the first sponsored film distributor in America. In 1949, the company was incorporated as an independent distribution service. In March, 1970 Association Films merged with Sterling Movies, Inc. to become Association-Sterling Films, a Division of Associated Films, Inc.

Services: Promotion and Publicity: Promotes sponsored films through catalogs, special supplements (directed to teachers and program chairmen), advertising in educational and adult journals, individual film brochures, exhibits at conventions, publicity services. Print Inspection and Maintenance: prints are electronically cleaned and inspected after each use; repairs are made as needed and replacement prints ordered on sponsor's authority; scratched prints are given Perma-New treatment, as authorized. Monthly Reports: sponsors receive detailed performance reports (data processed) which give audience size and composition; film user evaluations and comments; course of study where film was used; bookings and showings (current, year-to-date, and cumulative); summary of coverage by states; and other data about performance and audiences. Programming Services: confirmation and advance booking notices are sent to users and sponsors on a daily basis; bookers assist organizations in arranging programs and special distribution concepts (Movie-A-Week, You: the New Consumer, Vacationland Cinema, Cinema La Carte, Showcase Cinema etc.) Library Service Plan: a professional "physical handling" service for sponsored film libraries that provides all regular services except promotion, as desired) and includes Sponsor Imprinted forms.

Association-Sterling TV Division: This division is responsible for the distribution of sponsored films to commercial and educational TV stations. It maintains daily contact with TV programmers, creates sponsored film series and special concepts, prepares TV promotion kits, publicizes sponsored films in "TV Guide" and local newspapers and distributes newsclips and scripts to TV news department.

Association-Sterling/35 (Theatrical Division): A nationwide service for the distribution of sponsored short subjects to motion picture theaters. Association-Sterling, working with theatrical booking services and distributors in 31 exchange cities, supervises promotion, selection of theaters and future films, concentrating on first-run theaters in major cities and suburbs.

Creative Programming Services: Creation of specialized communications concepts for sponsors, including Theater Cavalcade, a 10-minute theatrical series with five participating sponsored segments in each issue; Tele-Lecture, a "live" TV interview series featuring industry and business spokesmen; TV Tempo, 3 to 5 minute TV news features for syndication to news and special events programmers; Radio Tempo, News and feature programs distributed to selected radio stations and News Screen, development and/or distribution of 60 second news and news-feature clips to TV news programs.

Background: The outgrowth of a pioneering program in the field of talking motion pictures by Electrical Research Products, a subsidiary of Western Electric Co., formed in 1927, Modern Talking Picture Service first emerged as the nontheatrical department of that company. Modern's present name was adopted by its licensees in 1935 and Frank Arlinghaus, then of ERPI, was placed in charge of this growing activity. Modern became an independent corporation in 1937 under the ownership and management of its distribution employees. In 1969, Modern was acquired by KDI Corporation of Cincinnati.

Channels of Distribution: Modern represents more than 700 organizations from industry, commerce and the professions. Corporate and public information films are circulated to both general and specific groups through channels throughout the U.S. and Canada.

Community Groups and Schools: Over a million bookings are made each year to community groups and schools.

Television: TV stations make regular use of sponsored films and seven of Modern's regional film libraries have a print inventory and TV staff to serve the needs of station in their areas. In addition, Modern distributes 30 and 60 second newscasts to TV stations throughout the country.

Theatrical: Movie houses use entertaining sponsored shorts to supplement their feature film programming.

Resort Cinema: Through this operation, prints are circulated to resorts, motels and family campgrounds in a given circuit. The films are assembled into programs and delivered to the resorts by Modern representatives. In all, a total of 1500 resorts are covered by a nationwide network of 40 circuits.

Skyport Cinema: Another of Modern's innovative extensions of non-theatrical distribution maintains free movie lounges in major airport terminals. Films provide waiting passengers with continuous entertainment and information.

Video Tape: Modern distributes sponsored video tapes to schools, colleges, industry and other audiences.

Infofilm: Modern is the member for the United States and Canada in Infofilm, the international association of informational film distributors.

College Cinema: Modern operates movie lounges in Student Unions on many campuses.

Normal and Special Services: For sponsors utilizing its service, the company promotes, ships, cleans, repairs, maintains and stores their films. Additionally, it counts audiences attendance, records their comments and furnishes the sponsor a monthly tabulation. Extensive data processing facilities and equipment for promotional printing are maintained at the National Service Center. All regional libraries are equipped for electronic film inspection and handling. In addition, Modern can distribute and help create supplemental material for films. Thus, at a very nominal cost, a sponsor can greatly increase the impact of his message.

MODERN MEDIA SERVICES DIVISION
1212 Avenue of the Americas, New York, N.Y. 10036

Phone: (212) 765-3100
Fontaine Kincheloe, Jr., Vice President & General Manager

This division was formed in 1971 to enable the company to move and grow with the current film utilization explosion and to capitalize on the many opportunities that will result from new technology such as CATV, CCTV, video cassettes and cartridge projec-

tors. Programs currently handled are Modern Film Rentals, Modern Video Programming and Modern Marketing Services.

THE MAKING OF THE BRIDGE AT LATITUDE ZERO

BY DONN F. BATES

INDONESIA! The very word has a far off ring to it. However, in this era of the jets and super jets, the vast oceanic distances continue to shrink bringing exotic, remote places ever closer.

Lying at the underbelly of the vast continent of Asia is the Indonesian archipelago of some three thousand islands stretched out in a chain three thousand miles long. And lying across the Equator like a bridge between continents is the island of Java, the focus of Indonesian life—both spiritual and political.

One of the most dramatic links between "The Spice Islands"—as the Republic of Indonesia was once known—and the modern world is, of course, its airline—Garuda Indonesian Airways. With a fleet of modern DC-8's and DC-9's built by the McDonnell Douglas Corporation at Long Beach, California, this relatively new airline is bringing people from all corners of the earth to the Republic of Indonesia for business and tourism.

To document the fantastic growth of this multi-island republic and its intrinsic beauty, Garuda Indonesian Airways, through its representatives at Long Beach, California, requested the cooperation of the McDonnell Douglas Audio-Visual Center, located in Santa Monica, California, in the making of a film that would reflect the image of present day Indonesia.

So it was that this writer, who would direct the film, together with cameraman Walt Tufts arrived at Kemayoran Airport in Djakarta—capital city of Indonesia—with cameras, lights and sound recording equipment to begin production of a half-hour film that would ultimately take us around the world.

It was the Fourth of July—a time for celebrations back in the United States—but for the crew it was just another day of planned photography.

Before sunrise two minibuses loaded with equipment, a crew now

numbering six—including four Indonesian technicians provided by Garuda—and Sylvie Suradji, who was to become the "star" of our film, drove out of Djakarta into the Javanese countryside.

Sylvie Suradji—young, photographable from any angle, demure and retiring in the manner of most Indonesian girls of twenty—was the key-stone of our film, "The Bridge at Latitude Zero."

Sylvie, actually a stewardess trainee, was selected from a number of students at Garuda's training center in Djakarta to symbolize the new Indonesia.

Sensing that through Sylvie we could tell the story of Garuda's efforts to become one of the major airlines of the world during Indonesia's strides forward as an emerging republic, she was selected to become the centerpiece of the film. And a wise choice it was, for it became apparent as shooting progressed that despite the fact that Sylvie had never "acted" prior to this time nor had any knowledge of film making, she was turning in a remarkable performance.

At first we had thought directing Sylvie might be difficult due to our limited knowledge of "Bahasa"—the official language of Indonesia—and her sparse English vocabulary. But as scene after scene went into the can—some of which required *real* acting on her part (including tears and unrestrained joy) all our worries disappeared. She was a trouper, sharing the discomforts of early calls, long days and difficult locations, asking only after a take if it had been "baik"—good in Bahasa.

Technically speaking, film making in Indonesia is not always easy. While shooting exteriors for example, the equatorial sun presents a contrast range problem which must be mod-

Walt Tufts, left; Donn Bates checking angle through camera. Photographed on country road in Java.

fied using reflectors and/or supplemental lighting. Since electricity is not normally available in rural areas and reflectors of a smaller size (because of shipping and packing limitations) may be used, much care must be taken in calculating exposures. Even in cities where connections to electrical power can be made when shooting interiors, the photographer must guard against low voltages which produce a less than desirable Kelvin Temperature. Batteries for camera power should be charged only in hotels where the voltage (110 in shaver outlets) is nominally close to the posted rating.

Careful attention to maintenance details will usually insure trouble free shooting unless the unexpected happens—which is to be expected.

With ten days of shooting in and around Djakarta now canned and shipped to Santa Monica for processing, we moved on to new locations.

Flying out of the capital city in a DC-9 the crew, Sylvie and Alidin Doena, Director of Marketing for Ga-

Donn F. Bates is Producer, Director, Film and Television Communications, McDonnell Douglas Corporation

da Indonesia Airways, took up a leading that would bring us to the island of Bali.

Near Denpasar—principle city of Bali—the majestic Bali Beach Hotel rises at the water's edge, supplying even the most discriminating traveller with luxurious services and accommodations. This would be "base camp" for our stay in Bali as we followed Sylvie into Hindu temples, topping the hotel arcades and dining western style" in the Bali Beach'sajah Room—a restaurant of magnificent proportions.

There we were able to capture on film both ends of the cultural ethic in Bali. At one end was the staging and filming of the traditional Balinese dance of welcome—the "Pendet" dance—while later that night, working to lip-sync playback, a trio of singers in the hard "rock" tradition belted out songs of the times to enthusiastic audiences.

Bali, the magic island had again worked its spell on us but we were brought back to reality by having to repack all the equipment and board a Garuda DC-8 at one-thirty in the morning for the long haul to Sydney, Australia—next location on the itinerary.

Sydney at that time of year—July—was enjoying its winter. The average temperature of 40 degrees fahrenheit as a far cry from the furnace-like temperatures of Bali and Sylvie, never having experienced the cold, simply shivered and got on with the job.

Then, two days later we were deposited in Singapore which turned out to be hotter even than was Bali. By this time the director and cameraman were fading just a bit but Sylvie smiled her incomparable smile and—got on with the job.

The famous "Tiger Balm Gardens"—a sort of Oriental Knott's Berry Farm—was the locale for a number of scenes as were numerous other locations in the city during our two day stay.

A telephone ringing insistently in the hour before dawn in Singapore signals another early morning departure.

Again, Halliburton cases, cast and crew board a Garuda DC-9—this time for a three hour flight back into Indonesia to an island lying to the north of Java.

Sumatra, the "Young Giant" nearly four times the size of Java, is the fifth largest island in the world.

Sylvie Suradji in typical Balinese dress.

We would touch down at Medan, a seventy year old city on the Delhi River.

Because our next destination was some hundred miles overland our usual complement of equipment, baggage and crew—now augmented with the addition of another half-dozen P.R. types, government officials and local Garuda representatives—were loaded into a caravan consisting of four ancient taxis and a wheezing land rover for the trip inland to one of the most beautiful places on this earth.

Lake Toba, formed by the cataclysmic explosion of a volcano some 375 thousand years ago, lies like a

jewel embedded in the mountains of Northern Sumatra. Its quiet beauty, devoid of all but the most meager commercial trappings, is a film maker's paradise.

Scouting locations in an open boat we explored cliffs and coves where white faces are seldom seen. In point of fact, as our boat neared one promising location, the "Toba People" we had seen watching us earlier disappeared into the tangle of foliage at the water's edge. When we questioned our boat's helmsman he explained that these shy people—only fifty years removed from cannibalism—were wary of the "Magic" of alien visitors.

Nonetheless, we were able the next day to capture on film some of the most interesting footage exposed thus far on our odyssey using Sylvie in Sumatranese costume and in modern dress to delineate the duality of cultures now present in the Lake Toba area. Climbing out of the valley of the lake the next morning, we looked back on its crystal depths with a real sense of regret at having to leave it behind.

With the smell of jet fuel (always an exotic one for this writer) hanging in the moist evening air at Medan Airport, jet engines once again came up to take-off power and we were airborne on a southerly track inbound to Djakarta.

Four more days of intensive shooting in and around the new Garuda facilities and the city itself added more red lines through those portions of the script marked "O.K.—Completed."

For some strange, sadistic reason it seems that all the world's airlines have made it mandatory for international travellers to arrive at airports in the wee small hours of the morning.

And so it was that we few, we happy band of brothers and Sylvie, arrived in the pre-dawn darkness at

paradox

continued from page 18

magazine, which has the highest regard for the contribution of the script-writer to sponsored films.

I'd like to suggest a compromise that will solve the problem both for the producers and for writers without offending any clients. I agree that it's not a good idea to have a long, boring list of individual credits at the end of an industrial film. And I also agree that the production film should have a separate credit at the end in order to establish a valid and continuing company image. But I like the kind of credits that I first saw used in productions by "On Film". A lot of contemporary filmmakers, like "Q.P.I." use the same title idea today.

At the end of the film there is a single professional credit title which says something like this: "This film was made by the following people:" And then there is a brief list of the names of the eight or ten principle people who worked on the film. It includes the director, writer, cameraman, designer, art director, editor, sound man, etc. It does not identify their specific function or contribution, but most people in our industry know what we do. Most important of all, it prevents anyone who is *not* on the list claiming that he wrote, directed, or edited the picture. It is then followed by the production company's credit which is usually combined with the end title if there is one.

And now that you've had enough time to think about how *you* would have handled the problem of the other panel member claiming my picture, I'll tell you how *I* handled the problem. While the picture was still running, I wrote a note and handed it to the other writer. It said: "I wrote that picture you crooked S.O.B.!" He read the note calmly, let the picture run to the end, then read the note to the audience, and said, "I've admired that script so often that after I showed the picture half-a-dozen times I convinced myself that I had actually written it myself. I apologize to Stan for having claimed the film, and I apologize to the audience for having deluded them, and myself. But I don't apologize to anyone for having screened the film. Everybody should see it. It's a very good picture."

Well, Readers, the other writer got a big round of applause. In the immortal words of the greatest con-man ever to appear on the silver screen W. C. Fields, "You Can't Cheat An Honest Man!"

Latitude Zero

continued from page 107

Diakarta's Kemayoran Airport for airlift to our next destination.

Some seventeen hours later—again in darkness—we deplaned in the city of antiquities—Athens—another truss in Garuda Indonesian Airways' bridge to the West.

It seemed a strange melding of two diverse cultures as we photographed Sylvie in traditional Indonesian costume (called "Sarong Kebaya") against the background of ancient Greece's Parthenon and the Temple of Zeus.

It was stranger yet for Sylvie who, until she had begun her studies with Garuda Indonesian Airways, had never been more than a few hundred kilometers from home in central Java.

Amsterdam is the European hub of Garuda's international operation and it was here that the final scenes needed to complete the film were acquired. Flight training simulators, maintenance hangars and language laboratories were filmed as well as the scenic canals and the shopping arcades of the city of Amsterdam.

Then it was over.

The grinding weeks of travel, hard work, joys, disappointments and creativity had culminated in a final "ting" as the last frames of a hundred foot roll of film cleared the camera gate.

Now there were a few moments for rest, for talk, for a quiet glass and for the inevitable tears (not solely confined to Sylvie) that would be shed as little gifts were exchanged on the evening prior to our mutual departures.

It had been a time of discovery for all of us.

More than that, we discovered the reality of living in different cultures and the joy in making a film of this total experience that became a part of our understanding of other people and other ways.

With the film brought to completion we had added some mortar to the bricks that built "The Bridge at Latitude Zero."

ANIMATED FILM SERVICE

CLARITY

AND CORN

by Charles Palmer

A FILM FESTIVAL EVALUATION of a current documentary film concludes with the words, "The subject matter, though important and clearly presented, is so pre-digested that mental effort is not required of the audience." This was bad, they thought.

Mental effort implies suspense, and personally, I regard suspense as appropriate to the theatrical query of "What's coming next?" but not to the documentary "What's going on?" This is true in any communication medium, but particularly true in films, though regrettably not evident to cinema critics and festival judges. I think that often their problem is that they have worked mostly with print; and film is, philosophically, different to the point of full reversal.

Watching a movie on a screen is like looking at a parade through a window. You can't check back to what's gone past, you don't know what's coming next, and what's moving past you at the moment must be comprehended, related, and "put on file" during the limited time it is visible.

This imposes special obligations on the film-maker, particularly in documentary. His images and action must be so clear and vivid that they "read" instantly without ambiguity, and their relationship to the theme-line must be quickly apparent. Hence, I think the corn of direct statement is preferable to the confusion of over-subtlety.

To achieve this free-flowing clarity, since the viewer cannot "look back to the previous page," the parade of thoughts should proceed in a straightforward and logical progression. It's fine to compel the viewer to think—but to think about the *raison d'être* of the total film; about the theme or overall objective, not about subordinate details. Dog-legs and backtracks and asides, characteristic of print, risk our losing the film viewer while he re-orientates, and clutters the "parade of impressions" by which the message of a film must be developed. Since the film, by its very mechanical nature, must move along steadily without allowing time for figuring things out, its ideas must be distilled to simplicity, and presented one at a time; with each idea developing naturally into the

next, moving in the pedagogic progression from the familiar to the new.

And it follows that the words which express the ideas in the narration or dialogue must be so arranged that their significance and relationship are obvious as they are heard, without the need of back-thinking by the viewer. For one example, take a nicely turned passage from a current film narration; *secure yet precarious, pleasant yet perilous, rewarding yet demanding; such is the inner life of a champion.* This has a nice rhythm and is impressive and clear on the typed narration page. But by the time the film's Narrator eventually discloses his grammatical subject, the viewer has lost track of the passed-by modifiers. Whereas if we announce the subject first, at the beginning of the thought, then the viewer is equipped to mentally relate the subsequent modifiers one by one as they parade past this ear, viz: *The life of the champion is secure but precarious, pleasant yet . . . and so on.*

But this sort of thing the critics class as corny, because it "requires no mental effort" from the audience. Uhhuh. But, may my New-Wave friends forgive me the heretical word—it is *clear*. And a touch of clarity in the gab would have freed the viewers to give their attention to the images; which in turn would have gained significance from words which now had meaning rather than just sonority. And most important, the viewers would have been liberated from resultless puzzle-work to devote their "mental effort" to the overall theme which the movie presumably has made to impart.

Straightforwardness is corn only to the self-conscious. And personally, I think the latter is the greater sin.

Charles "Cap" Palmer is Executive Producer of Parthenon Pictures of Hollywood.

REVIEWS AND PREVIEWS OF NEW VISUALS

Happiness Is Skiing

Sears Roebuck set out some years ago to establish itself as a leading supplier of nationally-recognized high-quality sporting goods. An important part of the public relations aspects of this program has been a series of films linking Sears with such leading figures in the sporting world as mountain climber Sir Edmund Hillary, fishing and baseball luminary Ted Williams, or very recently Shirley Englehorn, women's golf champion.

Newest in the series is *Happiness Is Skiing*, which features Othmar Schneider, a former Olympic ski champion, demonstrating modern techniques to the Jansen family of Littleton, Colorado, representing a family typical of the millions now attracted to the snow slopes each winter.

Ski-champ Othmar Schneider (l.) and ace cameraman Herbert Raditschnig (r.) showing special camera rig for action shots.

Behind the camera is Herbert Raditschnig, himself an accomplished skier, using his special rig which suspends the camera from the front or back of his body to capture and follow the skiers in action. His shots demonstrate that happiness truly is skiing.

Whither the Mailman?

He's still with us, according to the U.S. Postal Service's new film, *More and Louder*, and probably with a yapping dog still at his heels.

But he's one of the few things not changing in the mail service as the autonomous government-owned organization takes over. The film shows innovations now taking effect in sorting, handling and delivery; and describes future developments we can expect such as instantaneous reproduction of messages.

More and Louder is playing theatres throughout the country via Association-Sterling 35, theatrical division of Association-Sterling Films.

Bay Area Rapid Transit System in New Film

Innovations in rapid transit, showing how the San Francisco Bay Area commuter will benefit from the new system, are the subject of a new film going into production for the Bay Area Rapid Transit District.

Medion Productions, of San Francisco, will produce. Distribution will be to every available group audience, as well as television saturation.

What To Do About Discontented Employees

A how-to-do-it program for supervisor education examines and analyzes causes of employee discontent, explains the needs for recognizing signs of dissatisfaction and teaches proven techniques for handling such situations.

The program contains an instructor's guide, filmstrip, slides or overhead transparencies (purchaser's choice) and records or tape. It sells for \$100 from the producer, Training Services, Inc., Box 388, Rutherford, N.J.

Animated Ecology Film for Discussion Opener

Eggs is an ultra-sophisticated film on the problems of Planet Earth as seen by John and Faith Hubley.

A good film for setting the stage in discussions of where we're going in the quality of modern life, population control, religion, ethics and scientific humanism.

Film Images, 17 W. 60th St., New York, rents it.

Multi Projectors in Swimsuit Spectacular

More than 600 sales representatives and buyers from around the world crowded two ballrooms in Portland, Oregon's Hilton Hotel on August 31 for a multi-media spectacular to introduce Jantzen, Inc.'s 1972 line of swimwear and sportswear for men and women.

The 2½-hour show utilized six circular stages, 20 slide projectors, 16 round screens up to 16 feet in diameter, four motion picture projectors, 80 live models, and was automatically synchronized by a 32-channel capacity digital code multi-media computer. More than 4800 slides were used in the show, which was produced by VIA, Inc., a Portland-based creative group.

Funny Business

Harvey Korman, star of CBS's *The Carol Burnett Show*, is featured in a new series of comedy films designed for use by the business community. Korman is part of a specially-formed company, Korman-Swanson Productions, in Milwaukee, which will produce short films for sales meetings, conventions and sales training sessions.

According to Robert W. Swanson, Korman's partner in the new enterprise, "the films were designed specifically to help break the ice at high pressure sales meetings, to provide comic relief in intense sales training sessions and to attract customers into hospitality rooms at competitive conventions."

In a production entitled *Plan 15½*, one of the first three of a planned library of business humor films, Korman portrays "Old Iron Bottom," an evangelistic sales motivator hired to pep up a company's lagging sales force. In another, *Farwell, George Toggleboldt*, he parodies the universal business ritual of a retirement dinner. A third, *Return from the Road*, highlights Korman in a domestic comedy sketch on the life of a salesman spending five days a week on the road.

Harvey Korman (r.) as George Toggleboldt in new comedy series for business.

"Each film is approximately ten minutes in length and easily programmed into a busy agenda," says Korman. He further emphasized that the films were designed solely for the use of business and will not be shown on television or in theatres. The films will be available at a rental cost of \$100 each, or a purchase price of \$225, from Korman-Swanson Productions, 625 N. Milwaukee St., Milwaukee, Wis. 53202. A preview print of highlights of all three films is available for \$15, refundable when purchase or rental of films is made.

new products review

FEATURING NEW EQUIPMENT AND SERVICES

Super 8mm Sound Projector

FAIRCHILD CAMERA & INSTRUMENT has announced a new model Super 8mm sound projector, the Agent, Model Seventy-07. Seventeen pounds. Front and rear screen projection. Endless loop cartridge. 20 minutes playing time. Price is \$395. *Industrial Products Div., 75 Mall Drive, Commack, N.Y. 11725.*

16mm Camera Lenses and Accessories

PAILLARD, INC. has a new compact Vario-Switar 17-85mm zoom lens available in C or bayonet mount for various

model Bolex cameras. Can be mounted on turret with other lenses. f3.5 to f22. 3½ ft to infinity. 11 ounces. *1900 Lower Rd., Linden, N.J. 07036.*

KARL HEITZ is marketing the Periapollar 360-degree lens, which covers a complete horizontal circular image of 360 degrees without gaps. Vertical field is 60 degrees. Lens can be adapted to most still, motion picture and TV cameras, as well as to projectors. *929 Third Ave., New York, N.Y. 10022.*

ALAN GORDON ENTERPRISES has a new line of fog effect filters said to be ideal for matching fog conditions when photographing from day to day. Can be used with both b/w and color film. No exposure compensation is needed. *5363 N. Cahuenga Blvd., N. Hollywood, Calif. 91601.*

Slide Projector

FASTMAN KODAK has announced a new series of Carousel projectors featuring "whisper-quiet" operation. Generally similar to previous Carousels, the new models, designated "H" for "hushed", have a lower blower speed made possible by the General Electric ELH quartz-halogen lamp which dissipates heat through its rear surface while reflecting light from the front. *343 State St., Rochester, N.Y. 14650.*

Camera Accessory

LINE 60 has introduced a new Vacuum Platform, which is a suction-mounted

camera platform for use on smooth, flat surfaces. Fastens quickly to car tops, floors, without marring. *630 Ninth Ave., New York, N.Y. 10036.*

Filmstrip Projectors

BELL & HOWELL has a new sound-filmstrip projector, the Attache 35, packed in a Samsonite case. B&H Auto-load 35mm filmstrip cartridges are used, with a cassette player built-in. Screen is 9" by 12"; illumination 55 watt, 12 volt; weight 19 lbs; AC-line power. Price is \$350. *B&H AV Products Div., 7100 N. McCormick Road, Chicago, Ill. 60645.*

LA BELLE INDUSTRIES has brought out two new accessories for the Tutor 16 filmstrip projector permitting individual presentation use. One is a fold up

screen, the Tutor Theatre, which can be packed in a new protective dust cover containing storage compartments for sales literature and extra Compapak cartridges. *510 S. Worthington St., Oconomowoc, Wis. 53066.*

Audio Cassettes

AUDIO MAGNETICS is introducing a new line of Series QHF low noise audio cassettes said to reproduce a much wider dynamic range with greater frequency response. *14600 South Broadway, Gardena, Calif. 90248.*

Microphone Accessories

SHURE BROTHERS has announced a new series of seven "In-Line" microphone attenuators, equalizers and adaptors. Will modify a system to prevent overload, reverse phase, reduce low-frequency or high frequency noise, add presence, reduce "brightners", convert a balanced low-impedance microphone input to live level. *222 Hartrey Ave., Evanston, Ill. 60204.*

Cassette Duplicator

AMPEX' CORP's CD-200 high speed cassette-to-cassette duplicator provides 3000 C-30 copies per 8-hour working *continued on page 112*

before you buy any
color processor,
ask yourself these

5 questions:

How long does it take to warm up?

Normally it takes most processors 3 to 4 hours to get from ambient 70° to the required 100-110°. With a Treise Color Processor, warm-up takes only 20-45 minutes. (Think how much valuable time you save!)

Once on temperature, does it stay on temperature?

Treise Processors feature a unique "proportional control" system that maintains a close watch over the temperature and provides just the right amount of heat to maintain it at all times. There is no "stop 'n go," no wide fluctuations of temperature. Thus a Treise Processor is more economical to run than any other processor.

Does it provide consistent quality?

No other processor can assure you such unvaryingly consistent quality and performance — end to end, side to side, roll to roll, day to day! This is the kind of performance you should demand... and can take for granted when you buy from Treise.

Does it "cut corners" to feature a "cut-rate" price?

Treise Processors meet or exceed all film manufacturers' specifications. All chemical solutions are pump recirculated and filtered. All moving parts in the drive system run on ball bearings. All components are the finest that money can buy.

How easy is it to maintain?

When it comes to maintaining a Treise Processor, there's frankly very little of it. When necessary, however, you'll find that it has been designed with service in mind. For example, the film racks are removable without the use of tools and without disturbing thread-up. Moreover, all pumps, filters, etc., can be easily inspected and replaced in a few minutes, instead of the usual 2 to 3 hours delay!

Write for catalog on our complete line
of Color and B&W Processors!

REISE ENGINEERING, INC.

1941 First St. • San Fernando, Calif. 91340

NEW PRODUCTS *continued*

Vacuum Chambers isolate tape from cassette mechanism during duplication. Automatic loader. Rejects defects automatically. 400 Broadway, Rutherford City, Calif. 94005.

Storage Cases

JACK C. COTTEY CO. is now offering Luxor 12 Pak Cassette Books for filming, storing and carrying cassettes. Various sizes. Some also file filmstrips with matching cassettes. 104 Lake View Ave., Waukegan, Ill. 60085.

Video Equipment

DYNASCENCES CORP. has introduced a new Editor-Programmer for tape to tape assembling and insert editing on most 1" and 1/2" video tape recorders as well as 2" Quad machines. Provides control and data storage capability for accurate "start insert" and "end insert" points. Frame by frame adjustments possible. Township Line at BlueBell Rd., Blue Bell, Pa. 19422.

VIDEO CIRCUITS has announced a one-hour extended play adaptor for the Sony Video Rover II. Snap-on design requires no modification to the Video Rover. Price is \$189.95. 324 W. Route 59, Nanuet, N.Y. 10954.

Projector Lamphouse

OPTICAL RADIATION CORP. has introduced a new, Model 1000 Xenon

lamphouse to increase light output on any 35 mm, 16 mm or slide projector. Designed primarily for small theatre or industrial A-V facility. 115 volt AC. No venting needed. Has own power supply integrally contained. Simple alignment. Manual douser. 2626 South Peck Rd., Monrovia, Calif. 91016.

Sound Transfer Equipment

BELL & HOWELL CO.'S new Super 8 Magnetic Sound Transfer Console provides transfers at 200 ft. per minute. Constant monitoring possible. Immediate inspection possible with real-speed playback. Price is \$21,500. Professional Equipment Div., 7100 McCormick Rd., Chicago, Ill. 60645.

Programmer

EDMUND SCIENTIFIC CO.'S 3-channel programmer can be used to control Carousels, dissolve units, lights. Works with any stereo recorder, reel or cassette. Price is \$199.95. 380 Edscorp Bldg., Barrington, N.J. 08007.

Inadvertantly omitted from our Production and Laboratory Equipment Buyers Guide in September/October was **Oxberry Division of Richmark Camera Service's** complete line of motion picture printers, offering step and contact printing, aerial image, beam splitters, in all formats: 8-s8-16-35-70mm. 516 Simpson Pl., Bronx, N.Y. 10455.

JOHN DEERE'S 1971 "FARMING FRONTIERS"

OUR FARM RANCH CORRESPONDENT reports well-attended showings at this year's crop of annual John Deere

films. Following long years of tradition, the Illinois farm implement manufacturer has presented a

program of five sound/color films in dealer showrooms throughout the country.

The Ozark-oriented program, titled John Deere Farming Frontiers '71, included the following "Furrow on Film" motion pictures (italicized titles precede each description):

Cattle Rustling today is more of a problem than ever before. This Deere film dramatically depicts a cattle theft and suggests the steps a farmer can take to prevent rustling.

Farm Credit is an important management problem for many farmers. The film includes interviews with bankers and farmers who explain the importance of production and book-keeping records in credit transactions.

Hot Water Farming shows the results of irrigating farm crops with water that has been heated by industry.

Planned Herd Health Boosts Profits is a film showing how dairymen and livestock producers are profiting from monthly visits by veterinarians to their farms. The filmed report shows the dollar-and-cents results of such a plan.

Feeding of Processed Grains is a report on the benefits of feeding roasted corn, soybeans and other feeds to cattle and hogs.

The program was extremely relevant to the farmer/rancher audiences who attended regional showings as guests of their John Deere dealers. At Sanders & Stubblefield Implement Company's service/showroom in Alton, Mo. the previewers were also provided with sumptuous fish fry. Harking back to such renowned Deere features as *Doctor Jim*, with full professional casts and feature-length storylines, the new, factual approach to realistic problems and solutions offered viewers appears to be a solid gam, for both sponsor and audience.

IFPA JOURNAL

an official publication of
INFORMATION FILM PRODUCERS OF AMERICA, INC.
P.O. Box 1470, Hollywood, California 90028

Special Section Business Screen Magazine

November/December 1971

PRESIDENT'S COLUMN

Twelve seems to be a significant number for IFPA this year. Our 12th Annual Conference has been successfully concluded and we now start planning the next one to be held in Monterey, California in October 1972.

We now have Twelve Chapters of IFPA strategically located throughout the U.S. and in most major film production areas. Our "Cindy" is twelve years old and maturing beautifully.

The past three years have been extremely rewarding to me while serving our profession on the Board and next year promises to be another exciting year for IFPA. Our next President, Michael Rye, will lead an extremely competent team of specialists, all doing their utmost to make our Society more meaningful and beneficial to its members and the world community.

Speaking of the world—we now have international members from countries like South Africa, the Philippines, Canada, and countries in South America. Our "New Dimensions" theme of the recent conference can be-

come one of the goals for the coming year. New Dimensions at home and abroad!

This will be my last column in Business Screen as President, so it's appropriate to take this opportunity to sincerely thank those fellow members, chapter officers, and National Board members who have done so much in the past two years for IFPA's growth, stability and emergence as the outstanding professional society of the non-theatrical film industry. You can all take pride in your accomplishment and be assured that we will continue to depend on your leadership and enthusiasm next year. Many of you will be serving a second term, and this overlap with new participation is very healthy and strengthens our continuity of leadership. I personally will be just as active in my Board position of Immediate Past President in support of all IFPA activities, and for this I'm grateful. When one becomes involved, it proves to be so rewarding that sudden withdrawal is as difficult as with

drug addiction. I don't intend to be put out to pasture with so many things that still remain to be done.

For those who may read this column and who are *not* members, let me urge you to investigate and be informed on *what, who, and why* an IFPA membership is, are, and *what for*. Whether or not you can affiliate with a chapter is immaterial. You have the opportunity of being recognized as a professional in the new discipline of "communicator" or Information Specialist. We establish standards by which to measure yourself and your growth. We provide a forum for the free exchange of ideas and innovations. We offer guidance for the young and give recognition to both young and old. And we also promote executive awareness of the potential of the media and the people who work in audio-visual communication.

Let IFPA be a voice for you—and let IFPA hear your voice by becoming an active member.

—Bob Montague

CHAPTER NOTES

by BILL BLUME

The Chicago Chapter held an interesting program in September around the recently released U.S. Postal Service film, *Stamps, a National Calling Card*.

The Los Angeles Chapter delved into sound at their September meeting, featuring innovations, ideas and inventions to get better quality sound. The host was Cinesound.

The New York Chapter is meeting regularly in the 40th floor seminar room of Eastman Kodak on the Avenue of the Americas. Just organized during the summer, this new group is showing considerable vigor.

San Diego has continued a good series of programs throughout the Summer in addition to all the preparation for the 12th Annual Conference. In September, they met in the studio

of KFMB-TV for a program by Robert D. Gardner, Director of Motion Picture Production for Channel 8, concerning TV Documentaries and Commercials.

San Jose has announced a new slate of officers elected in August. Chairman is Carroll G. Whitaker, producer for Carrol Films; Program Chairman is Donald F. Decker of the Southern Pacific Transportation Company; Secretary Treasurer is Martin J. Oeltjen of United Technology Company; Publicity Chairman is John J. Kulpa, also of United Technology; and Membership Chairman is John Vincent of United Technology. The San Jose Chapter also recently recruited Cinechrome Laboratories of Palo Alto as a sustaining member and presented a plaque to John E. Hunt, Vice Presi-

dent/Sales Manager, in recent ceremonies.

The San Francisco Chapter in September featured Father Emory Tang, producer from St. Francis Productions, well known for his appearances at National IFPA conferences and the honorary IFPA Chaplain, in a program about his trials and tribulations of public service media involvement. Twelve new members were also welcomed.

The Seattle Chapter at their August meeting featured a new film, *Cyclist* by the award winning producer Bill Jansen, of KOMO-TV.

NOTE FOR: Connecticut Valley, Dallas, Ft. Worth, Inland Empire and Washington. We only left you out because your material did not arrive before our deadline. We'd like to hear from you earlier next time.

Continued on page 114

A CAMERA FOR EVERY MAN

BY CHUCK MACCRONE

Being a small "in house" film maker has its rewards, as well as some setbacks. Generally you are faced with very little help, small quarters and practically a nonexistent budget. The fact that you are a "one-man show" should scare the daylights out of you, but in most cases, only serves to motivate you to do your utmost for the boss, if for no other reason than to show him he made the right choice when he hired you in the first place. Such was my position when I joined Horex Incorporated in 1968.

Because I knew I was going to do it all myself, I selected my equipment slowly, to get maximum versatility and at a price I knew my company could afford. The mainstay of the Horex Media Department's operation is our R16B Beaulieu motion picture camera. This 16mm camera is fitted with an Angenieux 12-120 zoom lens. It has an exposure compensating device built in that eliminates the need, in some cases, for exposure readings. The camera is a featherweight by comparison to other 16mm's and it is adaptable!

I have been able to successfully adapt my R16B to a Polaroid MP-3 camera, Calumet 4x5 view camera, and to my entire (7) range of Nikon lenses.

The adaptation of the Beaulieu to the MP3 provides a rocksteady; vertical camera support, with the capability of macro and even micro motion picture photography. The mating of the two cameras is made easily by an adapter manufactured by Associate Arts Company, Box 4137-125 High Street, Portland, Maine 04101. This adapter is also used to mate the Beaulieu camera to the Calumet 4x5. The adapter is a blank 4x5 plate with several very precisely milled rings which serve to mate the "C" mount cine lenses to the 4x5 format. (See Figure #1.)

The beauty of this setup is that it is so easy. Total setup time is less than 5 minutes. By using the MP3 camera, the cameraman can check his scenes, exposures, or make a still for production books, customers, clients, etc., by simply using the roll film back which comes as an accessory on the vertical stand. With this setup, the photographer has complete interchangeabil-

Figure 1

ity of formats, ranging from 4x5 down to 16mm.

Using 16mm type 7242 film, I photographed a regular issue 6¢ United States postage stamp—the one with the U.S. Capitol shown. If you look closely, you will see in Figure 2, one of the upstairs windows of the White House! The 16mm film was then copied, using a 35mm Polaroid lens set at F4-18 second. This object could be enlarged still more by using the extension bellows to the macro lens but suffices for this example. Exposure is no problem because of the through-the-lens exposure control on the R16B.

By using the Associate Arts (4x5 to "C" mount) adapter, the Beaulieu or any other motion picture camera using the "C" mount, can be used as described.

The smaller company "in house" photographic team is likely as not to be called to provide still photographic coverage in addition to his other a.v. work.

This is a requirement at my company. I chose the Nikon because of its wide range of accessories, its ease of handling, and because 90% of my still work is reproduced to a maximum size of 8 x 10 inches. The fact that all of this equipment is interchangeable into any format I may choose, makes the choice of this type of equipment extremely valuable.

During my correspondence with Associate Arts Company, they mentioned another adapter they had, that would permit the mating of the Nikon lenses to the Beaulieu. Figure #3 shows the setup. Using the above-mentioned setup with the 16mm mounted to the MP3 camera, I began photographing a rather common object—a one dollar bill. Figure #4 shows a 16mm frame of Mr. George Washington's left eyeball.

Figure 2

Figure 3

Figure 4

Because there are so many advantages and interesting experiments that one can perform using the versatile equipment mentioned above, I sometimes find myself rambling. However, if those of you who are interested would like to know more about this setup, I would be pleased to enter into correspondence with you for the purpose of passing along information.

Wondering About Things

Is your press release being watched?

Remember the public service spot for the American Heart Association you saw on TV the other night?

Or the film clip about that new car on the evening news?

Press releases like these give you a unique opportunity to bring your message to the largest possible audience in the most convincing climate.

And now Modern—the largest distributor of sponsored films to television—is offering a new service to help you get the best possible coverage. We call it the Modern TV Newsfilm Network. Here's how it works:

You supply us with 16mm-sound footage. Plus a script for TV commentators who prefer to do their own narration.

We'll take it from there. To hundreds of television stations that use these film clips regularly. (We know because we work with them all the time.) And at the end of 60 days, we'll send you a report of which stations used your film, and how many people saw it.

Want to know more? Call or write for our free TV Newsfilm Kit. It's available for immediate release.

Modern Talking Picture Service, Inc.

1212 Avenue of the Americas, New York, N.Y. 10036
World's largest distributor of sponsored films and video tapes:
The Fifth Medium.

Introducing The Happy Medium.

Audiscan. The filmstrip that can
live like a motion picture. Which
means that now you can use motion
picture techniques to create
economical filmstrip programs.

For example, you can write an
exciting script with motion picture
continuity.

Shoot it with a standard 35
mm, motorized 35 still, or 16mm
motion picture camera. Or all three.

Edit and pace it to match story
action. With actual motion
sequences at up to 10 frames per
second. So you can reproduce live
action. Create dramatic transitions.
Show fleeting expressions. Then cut

to a real freeze-frame that takes
only one frame.

Add a synchronized sound track
with inaudible change signals. Use
up to 8-track mixing for multiple
sound effects.

Produce it on standard 16mm
release prints and standard 1/4"
magnetic tape. Using your standard
production equipment.

Then load it into an Audiscan
Synchro-Lock Cartridge—they hold
up to 350 frames and 35 minutes of
sound. And play it on one of
Audiscan's reliable, easy-to-use
projectors.

And when you show it to all

your prospects who want motion
pictures but can't afford them, you'll
know why we call it The Happy
Medium.

For more information on The
Audiscan System and Audiscan's
free production consulting service,
write to Mr. Jack Wilkins, Audiscan,
Inc., P.O. Box 1456, Bellevue,
Washington 98009. Or call him at
206-454-0694.

Then smile. And watch your
filmstrips move.

 **Audiscan.**

The Happy Medium.

This looks like 20 pounds
of samples,

but it's really 20 minutes
of dynamite.

Because film presentations are more dramatic. More interesting. More impressive. And they are always perfect.

Particularly when your salesmen carry the Bohn Benton Institor; a handsome, rear screen, Super 8, sound and motion picture projector.

It's an attache case. Neither bulky, nor awkward. Only 4-inches wide.

It's simple to operate. In less than 30 seconds, the unit can be set up and running in broad daylight.

It's cartridge loaded. There's no film threading and each cartridge plays film up to 20 minutes long.

It's versatile. The Institor easily converts to front projection for larger audiences.

And it's sensibly priced. \$300 for a single unit. Or as low as \$240 in quantities.

For more information, write Bohn Benton Inc., 110 Roosevelt Avenue, Mineola, N.Y. 11501.

Bohn Benton Institor

You'll be sold on the way it sells.

ECLAIR ACL HAS CLOUT

ACL has what you need in-close.
It loads fast, runs quiet
and is light to carry —
as easy to point as your finger.

ECLAIR ACL, the new 16mm camera
shoots 200 feet of film,
changes magazines in less than 5 seconds.

Weights less than 9 pounds —
is no bigger than a football
and as easy to handle.

Has worry-free accuracy.

Uses any lens,
and can take a lot of punishment.

Also the price is a nice feature.

ACL HAS CLOUT.

It's the professional's camera.

Circle 11 on Reader Service Card

Jury of TV Viewers Pick Best Commercial

A unique system for choosing the top TV commercial of the year was undertaken at the recent Chicago International Film Festival. 80 qualifying spots, selected by a professional committee, were broadcast over WTTW-TV to viewers throughout the Chicagoland area on October 19. Viewers were asked to vote by postcard for the top three commercials judging solely on each spot's ability to motivate interest in the product, service or idea promoted.

Wreckers smash another historic building.

Winner of this postcard vote, a real test of the ability of the film to move its audience, was *Your Heritage*, a 60-second spot created for the National Trust for Historic Preservation by Cinemakers, a New York producer. It is probably the first time a public service spot has won top prize in competition with some of the most elaborate product commercials.

Sony-3M in Cross Patent License Agreement

Sony Corporation and 3M Company have concluded a cross patent license agreement involving the manufacture and sale of magnetic tape and recording equipment.

The agreement will permit Sony to manufacture and sell the new 3M "High Energy" magnetic tape and 3M to manufacture and sell the new Sony 3/4-inch "U-Matic" videocassette equipment.

"High Energy" tape, manufactured exclusively for the past year by 3M Magnetic Products division, utilizes a cobalt-energized ferric oxide formulation to deliver what is said to be better quality signal but remains universally compatible with present equipment.

Sony has commenced the distribution of its "U-Matic" videocassette equipment in Japan and anticipates that it will introduce the same system into the U.S. market in early 1977.

The recording equipment will be manufactured and sold by 3M through its Mincom division under the Wollensak brand name. Plans for marketing the recorder by 3M are being developed.

National Education Association Honors Jamison Handy

Jamison Handy, whose innovative educational methods have kept students wide-awake in classrooms across the country since World War II, has received special recognition from the National Education Association (NEA). Mr. Handy is President of the Jam Handy Organization.

The NEA tribute was bestowed on Mr. Handy by the Association's Department of Audio Visual Instruction "In recognition of his outstanding contributions to the American people in the areas of public education, industrial and military training and to people throughout the world." The award is in the form of a montage depicting his lifework in these areas and is dedicated "The Sage of Aquarius—for making them understand."

New Photoplastic Recording Technique Announced

A method of recording images on film with the result ready for projection in a fraction of a second, without chemical processing, is being offered for licensing by the General Electric Company.

The technique, under development for several years, is called "photoplastic recording" (PPR). The brightness and clarity of the image has recently been greatly improved by the development of a thin metallic layer added to the film.

One advantage of the process is that the film is insensitive to light until just before it is used, at which time it is "charged" by exposing it to a high voltage power supply. When light strikes the film, the electrical

ges on the surface are redistrib-
i, and as a source of heat softens
layer of film, its surface is dis-
ed. When the film cools, a frac-
of a second later, the ridges are
en into a pattern that reproduces
image being recorded. If addi-
information needs to be added
, this can be done a number of
es without erasing the original
ge.

he speed of processing—in con-
t to conventional motion picture
—makes applications feasible in
puter-related microfilming, com-
s with graphic display outputs,
ary tactical situations, and in-
rial uses where holographs—giving
effect of three dimensions—are
e to study the performance of
s that may become distorted by
ation. Studies conducted recently
General Electric indicate that some
ation studies on complex parts
be reduced from months to days
the use of photoplastic recording.

Now... Capital Film offers two Full Service Laboratories...

- in Washington, D.C.
- in Miami, Florida

In May of this year, Capital Film completed expansion of its Miami lab into a full service facility with editorial, sound and processing capabilities.

Also, because of a growing demand from regional customers, the Miami facility has created a special slide film and film strip department.

Here's what a Capital Film customer NOW receives...besides the recognized quality and renowned customer service:

FROM MIAMI:

1. Full 35 and 16mm color positive printing and processing services as well as black and white.
2. Full 16mm color reversal printing and processing services including 7389 sound track prints.
3. Slide film and film strip department.
4. Optical printing department for blowup or reduction with new wet-gate.
5. Complete editorial and sound transfer facilities under one roof.
5. Color control with new Eastman Color Analyzer.

FROM WASHINGTON:

1. Full 35 and 16mm color positive printing and processing services as well as black and white.
2. Full 16mm color reversal printing and processing services including 7389 sound track prints.
3. Full Super 8mm color printing and processing services.
4. Super 8mm cartridge and cassette loading and repair.
5. Complete editorial and sound dubbing, re-recording, and transfer services —RCA WESTREX.
6. Optical printing department with wet-gate.
7. Color control with Hazeltine color analyzer.

It's a CAPITAL IDEA to give you full service...night or day.

For further information, fill in the coupon below for our NEW Corporate Information File, including price lists.

paradox

BY STANFORD SOBEL

PARADOX: The Person Who Pushes the Panic Button First Is Usually The One With The Least To Lose.

WHEN I WAS THIRTEEN I wrote a musical comedy show for my eighth grade graduation play. We had a twenty-five piece school orchestra, a cast of four adults and thirty children, and a chorus of eight-year olds from the third grade dressed as flowers. On our dress rehearsal night, our leading lady failed to show up. (In the tradition of the stage, she was also my girl friend.) We put in a substitute, and I ran over to her house, where I found her sick in bed and crying. I began to scream at her for missing the dress rehearsal, and finally she said: "What are you yelling about? I'm the one who just became a woman!"

The Panic Button has an irresistible attraction for many of the people in our business, and, like the teen-age director I was at thirteen, they're often the ones with the least at stake. I have many associates . . . and clients . . . who sincerely believe that film people do their best work when they're under pressure . . . So . . . they artificially create a sense of pressure with the idea of stimulating a high level of performance. In practice, this action is self-defeating. It doesn't take too long to figure out that when Charley says he needs the script on the 13th he really needs it on the 13th. But when Art says he needs the script on the 13th, he doesn't actually need it until the 15th, and Frank doesn't need a 13th script until the 21st, and so forth.

In my own case, I do my best work for the producer or client who levels with me . . . who tells me "I'd like it by the 13th so I can make some

changes and get it back to you on the 15th, and then show it to the client on the 21st." I lose respect for people who are less than candid with their writer, even though they explain later that they have to be that way in order to make sure the writer doesn't miss his promised deadline. My own reaction is to distrust a producer. When I learn that the script for which I sacrificed my weekend to complete on time has been sitting on his desk for three days without being read, because he didn't really need it for another ten days.

An artificial crisis brings out the cynic in me, but a true crisis brings out the professional. In fact, I would define the true professional as one who works smoothly, efficiently, and unflappably in a situation of total tension. This kind of confidence comes from being ready for the unexpected based upon prior experience. The whole film industry is a learning process, an educational environment. I have worked on very few film projects which resulted in my learning nothing new at all. And each one of those learning experiences has made me better equipped to cope with unexpected troubles when they occur without warning . . . as they often do.

Recently I was involved in a national sales meeting in St. Louis. In the middle of the morning program, a multimedia show with eight screens and 29 projectors, the electricity went out, not only in our hotel, but in the entire downtown area. Instantly, the director turned over the headset to me, in case the current came on quickly. He then picked up the dozen spare flashlights he kept in his briefcase next to his foot and a small portable bullhorn, which I had never seen him use. He quickly went up to the front of the room, and handed to the people in the first row every flashlight he had. They kept them trained on the director, who explained what had happened to the electricity. He then proceeded to tell about fifteen stories related to blackouts and blackout situations. Meantime, backstage, the projectionist was busily shutting off all

the switches to protect against surge damage when the current should come on again. When the light came on again, ten minutes later, the director received a big cheer from the salesmen in the room. He deserved it. And the show went on from there.

This ability to perform under pressure, this sense of being able to cope with the extraordinary, is the mark of the professional in business. Equally significant, however, is the ability to recognize a situation in which absolutely nothing can be done.

It is simply not possible to make certain kinds of pictures for certain kinds of budgets, and you are deluding your client if you do not advise him of this fact. There is absolutely no way you can get permission from the FAA to shoot helicopter photography at Kennedy Airport on a summer afternoon during the air-traffic rush-hour. The professional knows this fact, and he knows it in advance and does not waste everybody's time and money trying to do the impossible. He cannot bring a girl, either amateur or professional, into an automotive assembly plant without slowing down production on the line. You can't shoot as a gas station without interfering with the income of the dealer. The professional knows about all these limitations and takes them into account. He doesn't fight against them . . . he allows for them and copes with them.

It was at the Waldorf once that I heard the greatest comment of all about the panic button. The projectionist was trying very hard to program the dress rehearsal of a multimedia show and everything kept going wrong . . . none of it his fault. Finally the projectionist said to the client who kept rattling him by making erroneous remarks . . . "Please go away . . . you're making me nervous. I'm doing pretty well, considering I've never done this before!" That really frightened the client, who now had a genuine case of panic, because if he blew

Grand Prix, First and Second Prizes for U.S. at 12th International Film Festival in Spain

COMPETING AT BARCELONA on November 2-6 against 108 of the finest industrial motion pictures from 12 European countries and Japan, United States entries at the 12th International Industrial Film Festival captured one of the two Grand Prix, a First Prize and Second honors despite one of the fewest total entries in recent years submitted by this country. The U.S. sent only eight films as compared to an average of 15 entries submitted by Britain, France, Germany and Italy.

Delegates representing national confederations of industry from 16 countries were in attendance at the week-long showings, discussion forums and awards ceremonies hosted by Spain's Organization Sindical Española, that country's national association of manufacturers. Only Belgium was not represented by films at this year's event, held in the spacious facilities of the Palacio de Congresos, Barcelona's impressive trade fair grounds.

After a dismal showing at the Festival in Florence last year, where the U.S. won no awards and was represented by only a single delegate, this country rebounded with a strong and active delegation representing such companies as IBM, Pan American World Airways, The Port of New York Authority and Westinghouse. Modern Talking Picture Service, a founding member of InforFilm, the worldwide film distribution organization, sent both its executive vice-president, Bill Oard, and vice-president and general manager, Dan Kater. Your BUSINESS SCREEN correspondent, a member of the Advisory Board of the Council on International Nontheatrical Events, was elected president of the international jury reviewing films for one Category. Kater was a member of another Category jury, with Oard named as his alternate.

The U.S. entries were sent to Barcelona under the auspices of CINE, with selections being made on behalf of the National Association of Manufacturers, the official participating

group recognized by this competition, organized over the past decade by the Council of European Industrial Federations.

Most-honored of the U.S. entries was *The Real World*, winner of the Grand Prix for films made for specific industrial audiences and a First Prize recipient in its own category for management training & human relations films. *The Real World* was produced for IBM's Field Engineering Division by FWB & Associates, Inc. of New York City. The other U.S. prize winner was *Position Counts*, honored with a Second Prize trophy. This electronics' production film was sponsored by the Superior Electric Company, Bristol, Conn. and produced by The Communicators, Inc., of Pomfret Center, Conn.

Scene from Philips film *Light*.

Probably the finest film at the Festival, however, was the other Grand Prix winner, *Light*, a superlative visualization of commercial lighting design and applications, sponsored by a frequent Festival winner: N. V. Philips Gloelampenfabriken, of Eindhoven, Holland, N.V. Multifilm, of Hilversum, Holland, also a previous prize winner at these events, was the producing company, with Hattum Hoving as the talented director.

Light became eligible for the general public interest Grand Prix honor after receiving the First Prize for "films which have the purpose of contributing to the prestige of the industry con-

cerned." It was the Grand Prix winner after strong completion from *La Lautlose Revolution*, a West German entry which won a category First Prize for its sponsor, Pharma Informatica Ciba/Geigy/Roche/Sandoz. Leonora Film, headed by Dr. Georg Munck, Boblingen-Tannerberg, Federal Republic of Germany, was the producer of this scientific research film.

Great Britain, with 15 entries in competition, was easily the Festival's major award winner with two First Prizes, two Second Prizes and two Third Prizes.

In addition to the "first" for *La Lautlose Revolution*, the Federal Republic of Germany took a First Prize honor with *Grossrohre Aus Stahl*, produced for Mannesmannrohrwerke AG by Dido-Deutsche Industrie und Dokumentarfilm GmbH, both of Dusseldorf, and two Second Prizes.

Small in area but mighty in competition, Denmark submitted only five films and took home a First Prize and two Third Prizes.

The Danish winner of top honor was *Four in the Crowd*, an informative exposition on recognizing and treating diabetes symptoms for general audiences, sponsored by Novo Industri A/S of Copenhagen and produced by Laterna Film of Klampenborg, Denmark. Laterna became the Festival's first dual-award winner when that company's production of *Know How* created for F. L. Smidth & Co. of Copenhagen also won a Third Prize in another category, depicting complex operations in a cement factory. The other Danish award-winner, a Third Prize, was *Flash Drying Cellulose*, produced by Jorgen Bagge.

Filmproduktion, of Copenhagen, for Niro Atomizer Ltd. of Soborg.

France was another maximum entry competitor at Barcelona with 15 entries and captured two Third Prizes. The first of these, went to *Ma Banque Par Choeurs*, sponsored by Societe Generale, of Paris. This informative film on banking services was produced for the French banking firm by Films Jean Mineur, also of Paris. The other French Third Prize Winner was *Mines D'Aujourd'hui*, an exposition of new mining techniques, produced for Secoma and Joy Ville-Gozet, mining equipment companies, by Compagnie Lyonnaise de Cinema, of Lyon.

French pride in its past record of achievement at these Festivals was assuaged greatly when *Les Artisans*, sponsored by the Confederation Generale de l'Artisanat Francais, Paris, and produced by Les Analyses Cinematographiques, also of Paris, won the beautiful City of Barcelona special trophy, given producer Georges Roze for the film's "major social and educational values."

Holland added to its Grand Prix and First Prize laurels when the Special Prize trophy of the Ministry of Information and Tourism of Barcelona was awarded to Carillon Films, of Rijswijk, for the handsome entry, *Holland Under Glass*. Producers Gerard Raucamp and Ted de Wit of Carillon shared this special honor with their director, Cas Willers. The film colorfully depicts methods for improvement in the production of cut flowers in Holland. It was sponsored by Nederlandse Vereniging voor Bloemisterij, of the Hague, Holland.

Behind the Scenes

WE BELIEVE that Europe's annual International Industrial Film Festival, despite some obvious shortcomings still apparent after 12 years of continuous growth, stands alone in the world as both a showcase for the best work in industrial film production and as a very useful meeting place for serious executives concerned with this medium within their companies and governments.

Recession in Europe and elsewhere didn't deter sizable representation from 15 countries at Barcelona Nov. 2-6; although both commercial studio, lab, and distribution people just about equalled the corporate and manufacturing association delegates, it was an ideal meeting place.

Those concerned with the quality of judgment imposed on all entries can be assured that, for the most part, it was top drawer. Underscoring our faith in film as a universal language, little difficulty was encountered in the right film getting through to all of the 25-man international jury.

The decisions were primarily based on just three key criteria: Was the specific objective of the film achieved? Was the film likely to communicate at the level of the specified audience? Judge the technical and artistic qualities of the film (consider visual quality, sound and tempo).

Although there was some close voting below the First Prize level unanimity prevailed after discussion of various differences. The same kind of consensus judgment ruled when the various Category juries assembled, as required by Festival rules, to choose the two Grand Prix winners.

A striking example of international understanding attained by this extremely diverse group of film jurists was the selection of *The Real World* as a First Prize winner in its Category and, subsequently, the sizeable majority (nearly unanimous) votes given this IBM film by the full International Jury selecting it for the Grand Prix. This U.S. entry had to win or lose as much on its English sound track as it did on its admirable humorous characterization of one "typical" day in the life of an IBM Customer Engineer. The jury members got the message all right.

In the all-too-serious world of today's business, this film's humorous slant on an extremely pertinent problem: *service to the customer* probably got to many of the jurists at Barcelona. It should also be noted that many European entries, aside from Britain's, carried English sound tracks as did those from Japan.

In our opinion, shared by many at Barcelona, IBM has a rich property for international use in *The Real World*; foreign language sound tracks would provide this worldwide concern with an excellent vehicle for improving customer relations as well as its own employee showings. All too little humor prevailed in the films at Barcelona but when it did, witness the success of Britain's Gas Council prize winner: *I'm Glad You Asked That Question*, nearest competitor to *The Real World* for the Grand Prix and the British National Coal Board's First Prize winner, *The Self-Rescue Breathing Apparatus*. Both of these Category winners were very well done animation cartoon treatments.

In contrast, another IBM entry (IBM International) was that com-

pany's imaginative *Of Men and Demons*, originally created for last year's EXPO at Osaka, Japan. This 9-minute cartoon looked like a sure winner for some kind of award in its Category. But, in the opinions of many whom we talked at Barcelona, the film's very excellence for its primary Japanese and Asiatic audiences at Osaka, treating the subject of the environment and pollution in Far Eastern mythology for its characters of artwork, was less appreciated by Western viewers than we may have supposed. Sans verbalization with only a very good music track, *Of Men and Demons* depended on its images therein failed to impress its Category jury.

We did believe, however, that another U.S. entry, Kaiser Aluminum Chemical Corporation's *Light, Strong and Beautiful*, produced by Frank Thompson, Inc., deserved some kind of honors in its Category. This film created to stimulate an awareness of the worldwide scope of the aluminum industry and the universal use of its products, was a "natural" for this international competition. All we can say of its non-award fate was that the 16mm projection print sent to Barcelona wasn't top quality or the projector let down. The jury showing happened to attend was low in lumens and a letdown in impression clearly resulted. Films like this should be shown on 35mm for the best possible projection!

We've mentioned Festival shortcomings: a lack of restricted roundtable and forum discussion which should be a gathering place for worldwide sponsor/industrial buyer executives to exchange viewpoints and problems is a *paramount need*. What are you doing with VTR? How are you country's economics affecting film budgets? How can we mutually help improve international relationships?

What we're concerned about is an obvious need for a worldwide kind of International Industrial Audio-Visual Association, bringing together men of like concerns, with or without the presence of producers, etc.

Men like this should be able to meet and work together for their common concerns: better production, more sales, etc. The Internationals are an ideal setting as the finest of industrial product from many lands are shown each annual event, airline fares are coming down! And perhaps, some day our own National Association of Manufacturers will begin to take a real active interest in hosting such a gathering in the U.S., too!

**f you want
the sock, the
sophistication and
the sizzle of
multi-image, you
have to pay the
price.**

\$465.

usually, half price.

Working on tone pulses from your stereo tape recorder, the Quadra Que four-channel programmer runs any combination of four projectors to give you a faultless mix of slides, filmstrips and motion pictures. And if you run fewer than four projectors, you can use Quadra Que's automation to program anything from the house lights to the popcorn machine.

Quadra Que gives you important *exclusives*, too. Remote control, for example. Toggle-action programming switches. Compact, ultra-reliable integrated-circuit design. And 15-amp power outlet for your movie projector.

Want capability that grows with your ambition? Just add our companion Quadra Que 2 programmer, and get a total of eight channels, all still automated from a single track of your tape recorder.

Then there's the exclusive that may mean more to you than all the rest: programming sophistication without temperament. Even with the least expensive tape recorder, Quadra Que works perfectly every time.

If you're going into multi-image, go easy. See Quadra Que in action at any Spindler & Sauppé dealer, or write Spindler & Sauppé, 13034 Saticoy St., North Hollywood, Calif. 91605 (phone: 213-764-1800) for full details.

a-v man

Edward W. Palmer, Audio-Visual Supervisor, Public Relations Department, New England Telephone Company, and President of National Industrial Television Association, is our A-V Man in the first of a series of profiles of lead figures in the industrial audio-visual field.

HIS LONG CAREER AS AN AUDIO-VISUAL MAN, Edward W. Palmer has performed almost every task an A-V man is ever called upon to do. He is a producer (film and tape), he has supervised distribution, organized training activities, planned displays, designed and operated A-V communications centers of great imagination and efficiency. In his spare time he is a photographer, a teacher, a writer, a public citizen, and a lecturer. He is a complete A-V man, one of a breed now developing almost as an antithesis to the old characterization of an A-V man as just a "manager of equipment."

When he took his first steps on the audio-visual road back in the 1930's, Palmer studied the weaknesses of some of its practitioners then and determined to avoid them in his own career. "In the early days," Palmer says, "the A-V man in the schools was often the 'odd' teacher who didn't teach, so they put him in the back room with the equipment. As the industrial training supervisor, I was sometimes put in the job 'because he couldn't do any harm there'.

"Although the image is still there to haunt us, these things are now well in our past," Palmer believes now. "In industry today, I see the A-V man as an 'architect' for training programs or communications activities. The A-V man has to have the broad ability to design the most effective visual communications system to meet each need of his company as it arises. He should be able to constantly improve the learning and retention ability of company personnel, and to devise media to enhance the relations of his company with the community and the overall general public. As today's A-V directors are more and more given the chance to prove their value," he says, "they are moving out of the 'manager of equipment' category to become 'architects for training and development'."

Ed Palmer started with New England Telephone 35 years ago. With the exception of time spent in the U.S. Navy during World War II, he has spent most of his career in the company's Public Relations and Advertising Departments, including three years at Bell System Headquarters in New York as Display Supervisor.

At present he is Audio-Visual Supervisor, Public Relations Department, of New England Telephone, and is responsible for planning, experimentation and distribution of CCTV and audio-visual media for training.

A pioneer in CCTV for training, his ideas on practical uses of television in industry and his designs for multi-use centers have been widely adopted by business firms and educational institutions throughout the country.

Palmer's spare time activities have included many community projects, including Town Meeting Member, Reading, Mass., six years as a member of that town's School Committee, and two years as its chairman. He has also served as president of the Reading Symphony Orchestra, and is now serving on its Board of Directors.

He is best known for spearheading the civic campaign to save the Battleship U.S.S. Massachusetts, and received the Silver Anvil Award for his efforts from the Public Relations Society of America in 1966.

Palmer is at present writing a textbook on audio-visuals for industry, and has been working with teachers of the deaf on methods of television instruction for deaf children.

Two years ago Palmer was among the founding members of the National Industrial Television Association, and is serving as its president this year. The association grew out of the interest of business people who met informally to discuss their television problems. Regional and local city area groups are now forming within the association, and Palmer sees a period of great growth as video cassettes and other display devices come upon the scene.
